

# Doom Emacs Configuration

Emacs configuration for work and life!

Abdelhak Bougouffa\*

2022-08-01

## 1 This repository

This repository (abougouffa/dotfiles) contains my configuration files for **Zsh**, **Emacs**, **Vim**, **Alacritty** and other Linux related stuff.

If you want to reuse some of these configurations, you will need to modify some directories and add some user specific information (usernames, passwords...)

This is the main configuration file .doom.d/config.org, (available also as a PDF file, it contains the literal configuration for Doom Emacs, and I use it to generate some other user configuration files (define aliases, environment variables, user tools, Git configuration...).

### 1.1 How to install

Since commit 55c92810, I'm using **chezmoi** to manage my Dotfiles.

Now the Dotfiles can be installed using the following command; however, I don't recommend to install all of my dotfiles, try instead to adapt them or to copy some interesting chunks.

```
1 sudo pacman -S chezmoi
2 chezmoi init --apply abougouffa
```

## 1.2 Emacs stuff

To install my Doom Emacs configuration:

- Install Doom Emacs to `~/.config/emacs` or `.emacs.d`:

```
1 git clone https://github.com/doomemacs/doomemacs.git ~/.config/emacs
2
3 ~/.config/emacs/bin/doom install
```

Until 12b3d20e, I was using Chemacs2 to manage multiple Emacs profiles. Since I'm using only Doom Emacs and Doom recently introduced a new feature to bootstrap other Emacs configs, so I switched to a plain Doom Emacs config.

## 2 Intro

I've been using Linux exclusively since 2010, **GNU Emacs** was always installed on my machine, but I didn't discover the **real** Emacs until 2020, in the beginning, I started my Vanilla Emacs configuration from scratch, but after a while, it becomes a mess. As a new Emacs user, I didn't understand the in the beginning how to optimize my configuration and how to do things correctly. I discovered then Spacemacs, which made things much easier, but it was a little slow, and just after, I found the awesome Doom Emacs, and since, I didn't quit my Emacs screen!

In the beginning, I was basically copying chunks of Emacs Lisp code from the internet, which quickly becomes a mess, specially because I was using a mixture of vanilla Emacs style configurations and Doom style ones.

Now I decided to rewrite a cleaner version of my configuration which will be more Doom friendly, and for that, I found an excellent example in *tecosaur's* emacs-config, so my current configuration is heavily inspired by *tecosaur's* one.

### 2.1 This file

This is my literate configuration file, I use it to generate Doom's config files (`$DOOMDIR/init.el`, `$DOOMDIR/packages.el` and `$DOOMDIR/config.el`), as well as some other shell scripts, app installers, app launchers... etc.

Make `config.el` run (slightly) faster with lexical binding (see this blog post for more info).

```
1 ;;; config.el -*- lexical-binding: t; -*-
```

Add the shebang and the description to the `setup.sh` file, which will be used to set system settings and install some missing dependencies.

```
1 #!/bin/bash
2
3 # This is an automatically generated setup file, it installes some missing
4 # dependencies, configure system services, set system settings form better
5 # desktop integration... etc.
6 # Abdelhak BOUGOUFFA (c) 2022
```

Add the an initial comment to the `~/.zshrc` file.

```
1 # -*- mode: sh; -*-
2
3 # This file is automatically generated from my Org literate configuration.
4 # Abdelhak BOUGOUFFA (c) 2022
```

## 3 Doom configuration files

### 3.1 Pseudo early-init

This file will be loaded before the content of Doom's private `init.el`, I add some special stuff which I want to load very early.

```
1 ;; pseudo-early-init.el -*- lexical-binding: t; -*-
2
```

#### 3.1.1 Fixes

```
1 ;; Fix for #2386 until further investigation
2 ;; From https://git.sr.ht/~gagbo/doom-config
3 (when noninteractive
4   (after! undo-tree
5     (global-undo-tree-mode -1)))
```

#### 3.1.2 Check for external tools

Some of the added packages require external tools, I like to check for these tools and store the result in global constants.

```
1 (defun bool (val) (not (null val)))
2
3 ;; Some packages do not work correctly on Emacs built with the LUCID feature
4 (defconst IS-LUCID (bool (string-search "LUCID" system-configuration-features)))
5
6 (defconst AG-P (bool (executable-find "ag")))
7 (defconst EAF-P (bool (and (not IS-LUCID) (file-directory-p (expand-file-name "eaf/eaf-repo" doom-etc-dir)))))
8 (defconst MPD-P (bool (and (executable-find "mpc") (executable-find "mpd"))))
9 (defconst MPV-P (bool (executable-find "mpv")))
10 (defconst REPO-P (bool (executable-find "repo")))
11 (defconst FRICAS-P (bool (and (executable-find "fricas") (file-directory-p "/usr/lib/fricas/emacs"))))
12 (defconst MAXIMA-P (bool (executable-find "maxima")))
13 (defconst QUARTO-P (bool (executable-find "quarto")))
14 (defconst ROSBAG-P (bool (executable-find "rosbag")))
15 (defconst ZOTERO-P (bool (executable-find "zotero")))
16 (defconst CHEZMOI-P (bool (executable-find "chezmoi")))
17 (defconst BITWARDEN-P (bool (executable-find "bw")))
18 (defconst YOUTUBE-DL-P (bool (or (executable-find "yt-dlp") (executable-find "youtube-dl"))))
19 (defconst NETEXTENDER-P (bool (and (executable-find "netExtender") (file-exists-p "~/local/bin/netextender")
20   ↪ (file-exists-p "~/ssh/sslvpn.gpg"))))
21 (defconst CLANG-FORMAT-P (bool (executable-find "clang-format")))
22 (defconst LANGUAGE-TOOL-P (bool (executable-find "languagetool")))
```

## 3.2 Doom modules (`init.el`)

Here is the literate configuration which generates the Doom's `init.el` file, this file contains all the enabled Doom modules with the appropriate flags.

This section defines the default source blocks arguments. All source blocks in this section inherits these headers, so they will not be tangled unless overwriting in the block's header.

### 3.2.1 File skeleton

This first section defines the template for the subsections, it uses the `no-web` syntax to include subsections specified as `<<sub-section-name>>`.

```

1  ;;; init.el -*- lexical-binding: t; -*-
2
3  ;; This file controls what Doom modules are enabled and what order they load in.
4  ;; Press 'K' on a module to view its documentation, and 'gd' to browse its directory.
5
6  ;; I add some special stuff wich I want to load very early.
7  (load! "pseudo-early-init.el")
8
9  (doom!
10   :input
11   <<doom-input>>
12
13   :completion
14   <<doom-completion>>
15
16   :ui
17   <<doom-ui>>
18
19   :editor
20   <<doom-editor>>
21
22   :emacs
23   <<doom-emacs>>
24
25   :term
26   <<doom-term>>
27
28   :checkers
29   <<doom-checkers>>
30
31   :tools
32   <<doom-tools>>
33
34   :os
35   <<doom-os>>
36
37   :lang
38   <<doom-lang>>
39
40   :email
41   <<doom-email>>
42
43   :app
44   <<doom-app>>
45
46   :config
47   <<doom-config>>
48 )

```

### 3.2.2 Input (:input)

Enable bidirectional languages support (*bidi*).

```

1  bidi

```

### 3.2.3 General (:config)

Enable *literate* configuration (like this file!), and some defaults.

```

1  literate
2  (default +bindings +smartparens)

```

### 3.2.4 Completion (:completion)

I'm lazy, I like Emacs to complete my writings.

```
1 (vertico +icons)
2 company
```

### 3.2.5 User interface (:ui)

Enables some user interface features for better user experience, the beautiful `modeline`, the `treemacs` project tree, better version control integration with `vc-gutter`... and other useful stuff.

```
1 deft
2 doom
3 doom-dashboard
4 hl-todo
5 hydra
6 modeline
7 vc-gutter
8 zen
9 ophints
10 nav-flash
11 (window-select +numbers)
12 (ligatures +extra)
13 (popup +all +defaults)
14 (emoji +ascii +unicode +github)
15 (treemacs +lsp)
16 workspaces
```

### 3.2.6 Editor (:editor)

Some editing modules, the most important feature is `EVIL` to enable Vim style editing in Emacs. I like also to edit with multiple cursors, enable `yasnipet` support, wrap long lines, auto format support.

```
1 (evil +everywhere)
2 file-templates
3 fold
4 format
5 multiple-cursors
6 parinfer
7 snippets
8 word-wrap
```

### 3.2.7 Emacs builtin stuff (:emacs)

Beautify Emacs builtin packages.

```
1 (dired +dirvish +icons)
2 (ibuffer +icons)
3 (undo +tree)
4 vc
```

### 3.2.8 Terminals (:term)

Run commands in terminal from Emacs. I use mainly `vterm` on my local machine, however, I like to have `eshell`, `shell` and `term` installed to use them for remote file editing (via Tramp).

```

1  eshell
2  vterm
3  shell
4  term

```

### 3.2.9 Checkers (:checkers)

I like to check my documents for errors while I'm typing. The **grammar** module enables LanguageTool support.

```

1  (syntax +childframe)
2  (spell +aspell)
3  grammar

```

### 3.2.10 Tools (:tools)

I enable some useful tools which facilitate my work flow, I like to enable Docker support, EditorConfig is a good feature to have. I like to enable **lsp-mode** and **dap-mode** for coding and debugging by enabling the **lsp** and **debugger** modules with **+lsp** support (further customization for **lsp** and **dap** below). **pdf** adds support through **pdf-tools**, which are great for viewing PDF files inside Emacs, I also enable some extra tools, like **magit**, **lookup**, **tmux**... etc.

```

1  direnv
2  editorconfig
3  ein
4  gist
5  make
6  pdf
7  rgb
8  tmux
9  upload
10 (lsp +peek)
11 (debugger +lsp)
12 (docker +lsp)
13 (eval +overlay)
14 (lookup +docsets +dictionary +offline)
15 (magit +forge)
16 tree-sitter

```

### 3.2.11 Operating system (:os)

I enable **tty** for better support of terminal editing.

```

1  (tty +osc)

```

### 3.2.12 Language support (:lang)

Most of the projects I'm working on are mainly written in C/C++, Python, Rust and some Lisp stuff, I edit also a lot of configuration and data files in several formats (**csv**, **yaml**, **xml**, **json**, **shell** scripts...). I use Org-mode to manage all my papers and notes, so I need to enable as many features as I need, I do enable **plantuml** also to quickly plot UML models withing Org documents.

```

1  plantuml
2  emacs-lisp
3  common-lisp
4  data
5  qt
6  coq

```

```

7 (markdown +grip)
8 (ocaml +tree-sitter)
9 (cc +lsp +tree-sitter)
10 (json +lsp +tree-sitter)
11 (julia +lsp +tree-sitter)
12 (latex +lsp +latexmk +fold)
13 (rust +lsp +tree-sitter)
14 (ess +lsp)
15 (yaml +lsp)
16 (sh +lsp +tree-sitter)
17 (python +lsp +pyenv +conda +pyright +tree-sitter)
18 (racket +lsp +xp)
19 (scheme +mit +guile +racket +chez +gambit +gauche +chibi +chicken)
20 (org +dragndrop +gnuplot +jupyter +pandoc +noter +hugo +present +pomodoro +roam2)
21 (web +tree-sitter)

```

### 3.2.13 Email (:email)

I like to use `mu4e` to manage mail mailboxes. The `+org` flag adds `org-msg` support and `+gmail` adds better management of Gmail accounts.

```

1 (:if (executable-find "mu") (mu4e +org +gmail))

```

### 3.2.14 Apps (:app)

Emacs contains a ton of applications, some of them are supported by Doom, I like to use Emacs manage my calendar, chat on IRC, and receive news. I do use EMMS sometimes to play music without leaving Emacs, and I like to enable support for `emacs-everywhere`.

```

1 calendar
2 irc
3 emms
4 everywhere
5 (rss +org)

```

## 3.3 Additional packages (`packages.el`)

This section generates Doom's `packages.el`, with the associated configurations (`use-package!` blocks).

This file shouldn't be byte compiled.

```

1 ;; -*- no-byte-compile: t; -*-

```

## 4 General Emacs settings

### 4.1 User information

```

1 (setq user-full-name "Abdelhak Bougouffa"
2       user-mail-address "abougouffa@fedoraproject.org")

```

### 4.2 Secrets

Set the path to my GPG encrypted secrets. I like to set the cache expiry to `nil` instead of the default 2 hours.

```

1 (setq auth-sources '("~/authinfo.gpg")
2   auth-source-do-cache t
3   auth-source-cache-expiry 86400 ; All day, default is 2h (7200)
4   password-cache t
5   password-cache-expiry 86400)
6
7 ;; Set my GPG key as the default key
8 (setq-default epa-file-encrypt-to '("F808A020A3E1AC37"))

```

## 4.3 Better defaults

### 4.3.1 File deletion

Delete files by moving them to trash.

```

1 (setq-default delete-by-moving-to-trash t
2   trash-directory nil) ;; Use freedesktop.org trashcan

```

### 4.3.2 Window

Take new window space from all other windows (not just current).

```

1 (setq-default window-combination-resize t)

```

### 4.3.3 Messages buffer

Stick to buffer tail, useful with `*Messages*` buffer. Derived from this answer.

```

1 (defvar +messages-buffer-auto-tail--enabled nil)
2
3 (defun +messages-buffer-auto-tail--advice (&rest arg)
4   "Make *Messages* buffer auto-scroll to the end after each message."
5   (let* ((buf-name (buffer-name (messages-buffer)))
6     ;; Create *Messages* buffer if it does not exist
7     (buf (get-buffer-create buf-name)))
8     ;; Activate this advice only if the point is _not_ in the *Messages* buffer
9     ;; to begin with. This condition is required; otherwise you will not be
10    ;; able to use `isearch' and other stuff within the *Messages* buffer as
11    ;; the point will keep moving to the end of buffer :P
12    (when (not (string= buf-name (buffer-name)))
13      ;; Go to the end of buffer in all *Messages* buffer windows that are
14      ;; *live* (`get-buffer-window-list' returns a list of only live windows).
15      (dolist (win (get-buffer-window-list buf-name nil :all-frames))
16        (with-selected-window win
17          (goto-char (point-max))))
18      ;; Go to the end of the *Messages* buffer even if it is not in one of
19      ;; the live windows.
20      (with-current-buffer buf
21        (goto-char (point-max))))))
22
23 (defun +messages-buffer-toggle-auto-tail ()
24   "Auto tail the '*Messages*' buffer."
25   (interactive)
26   ;; Add/remove an advice from the 'message' function.
27   (cond (+messages-buffer-auto-tail--enabled
28     (advice-remove 'message '+messages-buffer-auto-tail--advice)
29     (setq +messages-buffer-auto-tail--enabled nil)
30     (message "+messages-buffer-auto-tail: Disabled.))
31     (t
32     (advice-add 'message :after '+messages-buffer-auto-tail--advice)
33     (setq +messages-buffer-auto-tail--enabled t)
34     (message "+messages-buffer-auto-tail: Enabled.))))

```

**Split defaults** Split horizontally to right, vertically below the current window.

```
1 (setq evil-vsplt-window-right t
2   evil-split-window-below t)
```

Show list of buffers when splitting.

```
1 (defadvice! prompt-for-buffer (&rest _)
2   :after '(evil-window-split evil-window-vsplt)
3   (consult-buffer))
```

#### 4.3.4 Undo and auto-save

There is a package bbatsov/super-save, maybe better than the default `auto-save-mode`.

```
1 (setq undo-limit 80000000 ;; Raise undo-limit to 80Mb
2   evil-want-fine-undo t ;; By default while in insert all changes are one big blob. Be more granular
3   auto-save-default t ;; Nobody likes to lose work, I certainly don't
4   scroll-preserve-screen-position 'always ;; Don't have `point' jump around
5   scroll-margin 2) ;; It's nice to maintain a little margin
```

#### 4.3.5 Editing

```
1 ;; Stretch cursor to the glyph width
2 (setq-default x-stretch-cursor t)
3
4 ;; Enable relative line numbers
5 (setq display-line-numbers-type 'relative)
6
7 ;; Iterate through CamelCase words
8 (global-subword-mode 1)
```

#### 4.3.6 Emacs sources

```
1 (setq source-directory
2   (expand-file-name "~/Softwares/aur/emacs-git/src/emacs-git"))
```

#### 4.3.7 Frame

```
1 ;; NOTE: Not tangled, replaced with params passed to emacsclient
2 ;; start the initial frame maximized
3 (add-to-list 'initial-frame-alist '(fullscreen . maximized))
4
5 ;; start every frame maximized
6 (add-to-list 'default-frame-alist '(fullscreen . maximized))
```

#### Maximizing

To avoid conflict when launching Emacs in `emacs-everywhere` mode. I'm using it in command line when calling `emacsclient`, by adding this:

```
--frame-parameters="(fullscreen . maximized)"
```

**Focus created frame** The problem is, every time I launch an Emacs frame (from KDE), Emacs starts with no focus, I need each time to **Alt-TAB** to get Emacs under focus, and then start typing. I tried changing this behavior from Emacs by hooking **raise-frame** at startup, but it didn't work.

Got from this comment, not working on my Emacs version.

```
1 ;; NOTE: Not tangled, not working
2 (add-hook 'server-switch-hook #'raise-frame)
```

After some investigations, I found that this issue is probably KDE specific, the issue goes away by setting: **Window Management > Window Behavior > Focus > Focus stealing prevention** to *None* in the KDE Settings.

```
1 ;; (set-frame-parameter nil 'internal-border-width 15)
2
3 ;; Add frame borders and window dividers
4 (modify-all-frames-parameters '((right-divider-width . 10)
5                                (internal-border-width . 10)))
6
7 (dolist (face '(window-divider window-divider-first-pixel window-divider-last-pixel))
8   (face-spec-reset-face face)
9   (set-face-foreground face (face-attribute 'default :background)))
10
11 (set-face-background 'fringe (face-attribute 'default :background))
```

Margins

## 5 Emacs daemon

### 5.1 Initialization

When the daemon is running, I almost always want to do a few particular things with it, so I may as well eat the load time at startup. We also want to keep **mu4e** running.

Lastly, while I'm not sure quite why it happens, but after a bit it seems that new Emacs client frames start on the **\*scratch\*** buffer instead of the dashboard. I prefer the dashboard, so let's ensure that's always switched to in new frames.

```
1 (defun +greedily-do-daemon-setup ()
2   (require 'org)
3   (when (and (featurep! :email mu4e) (require 'mu4e nil t))
4     (setq mu4e-confirm-quit t
5           +mu4e-lock-greedy t
6           +mu4e-lock-relaxed t)
7     (+mu4e-lock-start 'mu4e--start))
8   (when (and (featurep! :app rss) (require 'elfeed nil t))
9     (run-at-time nil (* 8 60 60) #'elfeed-update)))
10
11 (when (daemonp)
12   (add-hook 'emacs-startup-hook #' +greedily-do-daemon-setup)
13   (add-hook! 'server-after-make-frame-hook
14     (unless (string-match-p "\\*draft\\|\\*stdin\\|emacs-everywhere" (buffer-name))
15       (switch-to-buffer +doom-dashboard-name))))
```

### 5.2 Tweaks

#### 5.2.1 Save recent files

When editing files with Emacs client, the files does not get stored by **recentf**, making Emacs forgets about recently opened files. A quick fix is to hook the **recentf-save-list** command to the **delete-frame-functions** and

`delete-terminal-functions` which gets executed each time a frame/terminal is deleted.

```
1 (when (daemonp)
2   (add-hook! '(delete-frame-functions delete-terminal-functions)
3     (recentf-save-list)))
```

## 6 Package configuration

### 6.1 User interface

#### 6.1.1 Font

Doom exposes five (optional) variables for controlling fonts in Doom. Here are the three important ones: `doom-font`, `doom-unicode-font` and `doom-variable-pitch-font`. The `doom-big-font` is used for `doom-big-font-mode`; use this for presentations or streaming.

They all accept either a font-spec, font string ("Input Mono-12"), or xlfed font string. You generally only need these two:

Some good fonts:

- Iosevka Fixed (THE FONT)
- Nerd fonts
  - FantasqueSansMono Nerd Font Mono
  - mononoki Nerd Font Mono
  - CaskaydiaCove Nerd Font Mono
- Cascadia Code
- Fantasque Sans Mono
- JuliaMono (good Unicode support)
- IBM Plex Mono
- JetBrains Mono
- Roboto Mono
- Source Code Pro
- Input Mono Narrow
- Fira Code

```
1 (setq doom-font (font-spec :family "FantasqueSansMono Nerd Font Mono" :size 22)
2   doom-big-font (font-spec :family "FantasqueSansMono Nerd Font Mono" :size 32)
3   doom-variable-pitch-font (font-spec :family "Andika") ;; inherits the :size from doom-font
4   doom-unicode-font (font-spec :family "JuliaMono")
5   doom-serif-font (font-spec :family "Input Serif" :weight 'light))
```

### 6.1.2 Theme

Set Doom's theme, some good choices:

- doom-palenight
- doom-one
- doom-vibrant
- doom-dark+ (VS Code like)
- doom-tomorrow-night
- doom-xcode
- doom-material
- doom-ayu-mirage
- doom-monokai-pro

```

1 (setq doom-theme 'doom-vibrant)
2 (remove-hook 'window-setup-hook #'doom-init-theme-h)
3 (add-hook 'after-init-hook #'doom-init-theme-h 'append)
4 (delq! t custom-theme-load-path)
5
6 ;; By default 'doom-vibrant' uses red faces to mark modified file in modeline,
7 ;; lets change it to orange.
8 (custom-set-faces!
9   '(doom-modeline-buffer-modified :foreground "orange"))

```

### 6.1.3 Mode line

**Clock** Display time and set the format to 24h.

```

1 (after! doom-modeline
2   (setq display-time-string-forms
3     '((propertize (concat " " " 24-hours ":" minutes))))
4   (display-time-mode 1)) ; Enable time in the mode-line

```

**Battery** Show battery level unless battery is not present or battery information is unknown.

```

1 (after! doom-modeline
2   (let ((battery-str (battery)))
3     (unless (or (equal "Battery status not available" battery-str)
4                 (string-match-p (regexp-quote "unknown") battery-str)
5                 (string-match-p (regexp-quote "N/A") battery-str))
6       (display-battery-mode 1))))

```

```

1 (setq doom-modeline-major-mode-icon t
2       doom-modeline-major-mode-color-icon t
3       doom-modeline-buffer-state-icon t)

```

Mode line customization

### 6.1.4 Set transparency

```
1 ;; NOTE: Not tangled
2 (set-frame-parameter (selected-frame) 'alpha '(98 100))
3 (add-to-list 'default-frame-alist '(alpha 98 100))
```

### 6.1.5 Dashboard

**Custom splash image** Change the logo to an image, a set of beautiful images can be found in `assets`.

File
<code>emacs-e.svg</code>
<code>gnu-emacs-white.svg</code>
<code>gnu-emacs-flat.svg</code>
<code>blackhole-lines.svg</code>
<code>doom-emacs-white.svg</code>
<code>doom-emacs-dark.svg</code>

```
1 (setq fancy-splash-image (expand-file-name "assets/emacs-e.png" doom-private-dir))
```

```
1 (remove-hook '+doom-dashboard-functions #'doom-dashboard-widget-shortmenu)
2 (add-hook! '+doom-dashboard-mode-hook (hide-mode-line-mode 1) (hl-line-mode -1))
3 (setq-hook! '+doom-dashboard-mode-hook evil-normal-state-cursor (list nil))
4
5 (defun +doom/open-private-config-org ()
6   (interactive)
7   (when (file-directory-p doom-private-dir)
8     (find-file (expand-file-name "config.org" doom-private-dir))))
9
10 ;; (setq +doom-dashboard-menu-sections
11 ;;   '("Reload last session"
12 ;;     :icon (all-the-icons-octicon "history" :face 'doom-dashboard-menu-title)
13 ;;     :when (cond ((featurep! :ui workspaces)
14 ;;                  (file-exists-p (expand-file-name persp-auto-save-fname persp-save-dir)))
15 ;;              ((require 'desktop nil t)
16 ;;               (file-exists-p (desktop-full-file-name))))
17 ;;     :face (:inherit (doom-dashboard-menu-title bold))
18 ;;     :action doom/quickload-session)
19 ;;   ("Open mailbox"

21 ;;     :action =mu4e)
22 ;;   ("Open org-agenda"
23 ;;     :icon (all-the-icons-octicon "calendar" :face 'doom-dashboard-menu-title)
24 ;;     :when (fboundp 'org-agenda)
25 ;;     :action org-agenda)
26 ;;   ("Jump to bookmark"
27 ;;     :icon (all-the-icons-octicon "bookmark" :face 'doom-dashboard-menu-title)
28 ;;     :action bookmark-jump)
29 ;;   ("Open config.org"
30 ;;     :icon (all-the-icons-fileicon "config" :face 'doom-dashboard-menu-title)
31 ;;     :when (file-directory-p doom-private-dir)
32 ;;     :action +doom/open-private-config-org)))
33
34 (defun +doom-dashboard-setup-modified-keymap ()
35   (setq +doom-dashboard-mode-map (make-sparse-keymap))
36   (map! :map +doom-dashboard-mode-map
37         :desc "Find file" :ne "f" #'find-file
38         :desc "Recent files" :ne "r" #'consult-recent-file)
```

```

39 :desc "Config dir" :ne "C" #'doom/open-private-config
40 :desc "Open config.org" :ne "c" #'doom/open-private-config-org
41 :desc "Open dotfile" :ne "." (cmd! (doom-project-find-file "~/config/"))
42 :desc "Notes (roam)" :ne "n" #'org-roam-node-find
43 :desc "Switch buffer" :ne "b" #'vertico/switch-workspace-buffer
44 :desc "Switch buffers (all)" :ne "B" #'consult-buffer
45 :desc "IBuffer" :ne "i" #'ibuffer
46 :desc "Previous buffer" :ne "p" #'previous-buffer
47 :desc "Email" :ne "m" #'mu4e
48 :desc "Quit" :ne "Q" #'save-buffers-kill-terminal
49 :desc "Show keybindings" :ne "h" (cmd! (which-key-show-keymap '+doom-dashboard-mode-map)))
50
51 (add-transient-hook! #'doom-dashboard-mode (+doom-dashboard-setup-modified-keymap))
52 (add-transient-hook! #'doom-dashboard-mode :append (+doom-dashboard-setup-modified-keymap))
53 (add-hook! 'doom-init-ui-hook :append (+doom-dashboard-setup-modified-keymap))
54
55 (map! :leader :desc "Dashboard" "d" #'doom-dashboard/open)

```

## Dashboard

### 6.1.6 Which key

Make which-key popup faster.

```

1 (setq which-key-idle-delay 0.5 ;; Default is 1.0
2   which-key-idle-secondary-delay 0.05) ;; Default is nil

```

I stol this chunk from tecosaur's config, it helps replacing the `evil-` prefix with a unicode char, making `which-key`'s candidate list less verbose.

```

1 (setq which-key-allow-multiple-replacements t)
2
3 (after! which-key
4   (pushnew! which-key-replacement-alist
5     '("(" . "\\`+?evil[-:]?\\(?:a-\\)?\\(.*\\)") . (nil . "\\1"))
6     '("("`g s" . "\\`evilem--?motion-\\(.*\\)") . (nil . "\\1"))))

```

### 6.1.7 Window title

I'd like to have just the buffer name, then if applicable the project folder.

```

1 (setq frame-title-format
2   '("("
3     (:eval
4       (if (s-contains-p org-roam-directory (or buffer-file-name ""))
5         (replace-regexp-in-string
6           ".*[0-9]*-?" " "
7           (subst-char-in-string ?_ ? buffer-file-name))
8         "%b"))
9     (:eval
10      (let ((project-name (projectile-project-name)))
11        (unless (string= "-" project-name)
12          (format (if (buffer-modified-p) " %s" " %s") project-name))))))

```

### 6.1.8 Fringe

Increase the left fringe width, to enable rendering breakpoints (in debug modes) correctly.

```

1 ;; (after! lsp-mode
2 ;;   (add-hook 'lsp-mode-hook (lambda () (set-fringe-mode '(15 . 15)))))
3

```

```

4 (setq-default left-fringe-width 25
5               right-fringe-width 25)

```

### 6.1.9 Vertico

Since doom-emacs@ece4a74, Doom supports the `+childframe` for `:completion` `vertico`. This can be used to adjust the left and right fringes.

```

1 (after! vertico-posframe
2   (setq vertico-posframe-parameters '((left-fringe . 12) (right-fringe . 14))
3     vertico-posframe-border-width 3))

```

#### 6.1.10 Company

I do not find `company` useful in Org files.

```

1 (setq company-global-modes
2   '(not erc-mode
3         circe-mode
4         message-mode
5         help-mode
6         gud-mode
7         vterm-mode
8         org-mode))

```

#### 6.1.11 SVG tag

```

1 (package! svg-tag-mode)

```

```

1 (use-package! svg-tag-mode
2   :commands svg-tag-mode
3   :config
4   (setq svg-tag-tags
5     '(("^\\[*,* .* \\(:[A-Za-z0-9]+\\)" .
6       ((lambda (tag) (svg-tag-make)
7         tag
8         :beg 1
9         :font-family "Roboto Mono"
10        :font-size 6
11        :height 0.6
12        :padding 0
13        :margin 0)))
14     ("\\(:[A-Za-z0-9]+:\\)" .
15       ((lambda (tag) (svg-tag-make)
16         tag
17         :beg 1
18         :end -1
19         :font-family "Roboto Mono"
20         :font-size 6
21         :height 0.6
22         :padding 0
23         :margin 0))))))

```

### 6.1.12 Focus

Dim the font color of text in surrounding paragraphs, focus only on the current line.

```
1 (package! focus)
```

```
1 (use-package! focus
2   :commands focus-mode)
```

### 6.1.13 Smooth scrolling

```
1 (when (<= emacs-major-version 28)
2   (package! good-scroll))
```

```
1 (if (> emacs-major-version 28)
2     (pixel-scroll-precision-mode 1)
3     (use-package! good-scroll
4       :config (good-scroll-mode 1)))
```

### 6.1.14 All the icons

Set some custom icons for some file extensions, basically for .m files.

```
1 (after! all-the-icons
2   (setcdr (assoc "m" all-the-icons-extension-icon-alist)
3     (cdr (assoc "matlab" all-the-icons-extension-icon-alist)))))
```

## 6.2 Editing

### 6.2.1 Scratch buffer

Tell the scratch buffer to start in `emacs-lisp-mode`.

```
1 (setq doom-scratch-initial-major-mode 'emacs-lisp-mode)
```

### 6.2.2 Mouse buttons

Map extra mouse buttons to jump between buffers

```
1 (map! :n [mouse-8] #'better-jumper-jump-backward
2       :n [mouse-9] #'better-jumper-jump-forward)
```

### 6.2.3 Page break lines

A feature that displays ugly form feed characters as tidy horizontal rules. Inspired by M-EMACS.

```
1 (package! page-break-lines)
```

```

1 (use-package! page-break-lines
2   :diminish
3   :init (global-page-break-lines-mode))

```

### 6.2.4 Binary files

Taken from this answer.

```

1 (defun +hexl/buffer-binary-p (&optional buffer)
2   "Return whether BUFFER or the current buffer is binary.
3
4   A binary buffer is defined as containing at least one null byte.
5
6   Returns either nil, or the position of the first null byte."
7   (with-current-buffer (or buffer (current-buffer))
8     (save-excursion (goto-char (point-min))
9       (search-forward (string ?\x00) nil t 1))))
10
11 (defun +hexl/hexl-if-binary ()
12   "If `hexl-mode' is not already active, and the current buffer
13   is binary, activate `hexl-mode'."
14   (interactive)
15   (unless (eq major-mode 'hexl-mode)
16     (when (+hexl/buffer-binary-p)
17       (hexl-mode))))
18
19 (add-to-list 'magic-fallback-mode-alist '(+hexl/buffer-binary-p . hexl-mode) t)

```

### 6.2.5 Very large files

The *very large files* mode loads large files in chunks, allowing one to open ridiculously large files.

```

1 (package! vlf)

```

To make VLF available without delaying startup, we'll just load it in quiet moments.

```

1 (use-package! vlf-setup
2   :defer-incrementally vlf-tune vlf-base vlf-write vlf-search vlf-occur vlf-follow vlf-ediff vlf)

```

### 6.2.6 Evil

I'm not using `evil-escape`, lets disable it.

```

1 (package! evil-escape :disable t)

```

```

1 (after! evil
2   (setq evil-kill-on-visual-paste nil)) ; Don't put overwritten text in the kill ring

```

### 6.2.7 Aggressive indent

```

1 (package! aggressive-indent)

```

```

1 (use-package! aggressive-indent
2   :commands (aggressive-indent-mode))

```

### 6.2.8 YASnippet

Nested snippets are good, enable that.

```

1 (setq yas-triggers-in-field t)

```

## 6.3 Literate configuration

### 6.3.1 Allow babel execution in doom CLI actions

This file generates all my Doom config files, it works nicely, but for it to work with `doom sync` et al. I need to make sure that Org doesn't try to confirm that I want to allow evaluation (I do!).

Thankfully Doom supports `$DOOMDIR/cli.el` file which is sourced every time a CLI command is run, so we can just enable evaluation by setting `org-confirm-babel-evaluate` to `nil` there.

While we're at it, we should silence `org-babel-execute-src-block` to avoid polluting the output.

```

1 ;;; cli.el -*- lexical-binding: t; -*-
2 (setq org-confirm-babel-evaluate nil)
3
4 (defun doom-shut-up-a (orig-fn &rest args)
5   (quiet! (apply orig-fn args)))

```

### 6.3.2 Asynchronous tangling

Doom adds an `org-mode` hook `+literate-enable-recompile-h`. This is a nice idea, but it's too blocking for my taste. Since I trust my tangling to be fairly straightforward, I'll just redefine it to a simpler, async, function.

```

1 (defvar +literate-tangle--proc nil)
2 (defvar +literate-tangle--proc-start-time nil)
3
4 (defadvice! +literate-tangle-async-h ()
5   "A very simplified version of '+literate-tangle-h', but async."
6   :override #' +literate-tangle-h
7   (unless (getenv "__NOTANGLE")
8     (let ((default-directory doom-private-dir))
9       (when +literate-tangle--proc
10         (message "Killing outdated tangle process...")
11         (set-process-sentinel +literate-tangle--proc #'ignore)
12         (kill-process +literate-tangle--proc)
13         (sit-for 0.3)) ; ensure the message is seen for a bit
14       (setq +literate-tangle--proc-start-time (float-time)
15             +literate-tangle--proc
16             (start-process "tangle-config"
17                           (get-buffer-create " *tangle config*" )
18                           "emacs" "--batch" "--eval"
19                           (format "(progn \

61     (add-to-list 'treemacs-ignored-file-predicates #' +treemacs-ignore-filter))

```

### 6.4.3 Projectile

Doom Emacs defined a function `# (doom-project-ignored-p path)` and uses it with `# projectile-ignored-project-function`. So we will create a wrapper function which calls Doom's one, with an extra check.

```

1 ;; Run 'M-x projectile-project-search-path' to reload paths from this variable
2 (setq projectile-project-search-path
3     ' ("~/PhD/workspace"
4       "~/PhD/workspace-no"
5       "~/PhD/papers"
6       "~/PhD/workspace-no/ez-wheel/swd-starter-kit-repo"
7       "~/Projects/foss"))
8
9 (setq projectile-ignored-projects
10     ' ("/tmp"
11       "~/"
12       "~/.cache"
13       "~/.emacs.d/.local/straight/repos/"))

```

```

14 (setq +projectile-ignored-roots
15     '("~/cache"
16       ;; No need for this one, as `doom-project-ignored-p' checks for files in `doom-local-dir'
17       "~/emacs.d/.local/straight/"))
19
20 (defun +projectile-ignored-project-function (filepath)
21     "Return t if FILEPATH is within any of `+projectile-ignored-roots'"
22     (or (doom-project-ignored-p filepath) ;; Used by default by doom with `projectile-ignored-project-function'
23         (some (lambda (root) (file-in-directory-p (expand-file-name filepath) (expand-file-name root)))
24               +projectile-ignored-roots)))
25
26 (setq projectile-ignored-project-function #'+projectile-ignored-project-function)

```

#### 6.4.4 Tramp

Let's try to make tramp handle prompts better

```

1 (after! tramp
2   (setenv "SHELL" "/bin/bash")
3   (setq tramp-shell-prompt-pattern "\\(?:~|\\|
4   \\)[^#%>\\n]*?#[^#%> ] *\\(\\[[0-9;]*[a-zA-Z] *\\))*"; default +

```

#### 6.4.5 Eros-eval

This makes the result of evals slightly prettier.

```

1 (setq eros-eval-result-prefix " ")

```

#### 6.4.6 dir-locals.el

Reload dir-locals.el variables after modification. Taken from this answer.

```

1 (defun +dir-locals-reload-for-current-buffer ()
2   "reload dir locals for the current buffer"
3   (interactive)
4   (let ((enable-local-variables :all))
5     (hack-dir-local-variables-non-file-buffer)))
6
7 (defun +dir-locals-reload-for-all-buffers-in-this-directory ()
8   "For every buffer with the same `default-directory` as the
9   current buffer's, reload dir-locals."
10  (interactive)
11  (let ((dir default-directory))
12    (dolist (buffer (buffer-list))
13      (with-current-buffer buffer
14        (when (equal default-directory dir)
15          (+dir-locals-reload-for-current-buffer))))))
16
17 (defun +dir-locals-enable-autoreload ()
18   (when (and (buffer-file-name)
19             (equal dir-locals-file (file-name-nondirectory (buffer-file-name))))
20     (message "Dir-locals will be reloaded after saving.")
21     (add-hook 'after-save-hook '+dir-locals-reload-for-all-buffers-in-this-directory nil t)))
22
23 (add-hook! '(emacs-lisp-mode-hook lisp-data-mode-hook) #' +dir-locals-enable-autoreload)

```

### 6.4.7 Language Server Protocol

**Eglot** Eglot uses `project.el` to detect the project root. This is a workaround to make it work with `projectile`:

```

1 (after! eglot
2   ;; A hack to make it works with projectile
3   (defun projectile-project-find-function (dir)
4     (let* ((root (projectile-project-root dir)))
5       (and root (cons 'transient root))))
6
7   (with-eval-after-load 'project
8     (add-to-list 'project-find-functions 'projectile-project-find-function))
9
10  ;; Use clangd with some options
11  (set-eglot-client! 'c++-mode '("clangd" "-j=3" "--clang-tidy"))

```

### LSP mode

**Enable some useful UI stuff** LSP mode provides a set of configurable UI stuff, Doom Emacs disables some of the UI components; however, I like to enable some less intrusive, more useful UI stuff.

```

1 (after! lsp-ui
2   (setq lsp-ui-sideline-enable t
3         lsp-ui-sideline-show-code-actions t
4         lsp-ui-sideline-show-diagnostics t
5         lsp-ui-sideline-show-hover nil
6         lsp-log-io nil
7         lsp-lens-enable t ; not working properly with ccls!
8         lsp-diagnostics-provider :auto
9         lsp-enable-symbol-highlighting t
10        lsp-headerline-breadcrumb-enable nil
11        lsp-headerline-breadcrumb-segments '(symbols)))

```

```

1 (after! lsp-clangd
2   (setq lsp-clients-clangd-args
3         '("-j=4"
4           "--background-index"
5           "--clang-tidy"
6           "--completion-style=detailed"
7           "--header-insertion=never"
8           "--header-insertion-decorators=0"))
9   (set-lsp-priority! 'clangd 1))

```

### LSP mode with clangd

```

1 ;; NOTE: Not tangled, using the default ccls
2 (after! ccls
3   (setq ccls-initialization-options
4         '(:index (:comments 2
5                  :trackDependency 1
6                  :threads 4)
7           :completion (:detailedLabel t)))
8   (set-lsp-priority! 'ccls 2)) ; optional as ccls is the default in Doom

```

### LSP mode with ccls

### Enable lsp over tramp

#### 1. Python

```

1 (after! tramp
2   (require 'lsp-mode)
3   ;; (require 'lsp-pyright)
4
5   (setq lsp-enable-snippet nil
6         lsp-log-io nil
7         ;; To bypass the "lsp--document-highlight fails if
8         ;; textDocument/documentHighlight is not supported" error
9         lsp-enable-symbol-highlighting nil)
10
11  (lsp-register-client
12   (make-lsp-client
13    :new-connection (lsp-tramp-connection "pyls")
14    :major-modes '(python-mode)
15    :remote? t
16    :server-id 'pyls-remote)))

```

#### 2. C/C++ with ccls

```

1 ;; NOTE: WIP: Not tangled
2 (after! tramp
3   (require 'lsp-mode)
4   (require 'ccls)
5
6   (setq lsp-enable-snippet nil
7         lsp-log-io nil
8         lsp-enable-symbol-highlighting t)
9
10  (lsp-register-client
11   (make-lsp-client
12    :new-connection
13    (lsp-tramp-connection
14     (lambda ()
15       (cons ccls-executable ; executable name on remote machine 'ccls'
16            ccls-args)))
17    :major-modes '(c-mode c++-mode objc-mode cuda-mode)
18    :remote? t
19    :server-id 'ccls-remote))
20
21  (add-to-list 'tramp-remote-path 'tramp-own-remote-path))

```

#### 3. C/C++ with clangd

```

1 (after! tramp
2   (require 'lsp-mode)
3
4   (setq lsp-enable-snippet nil
5         lsp-log-io nil
6         ;; To bypass the "lsp--document-highlight fails if
7         ;; textDocument/documentHighlight is not supported" error
8         lsp-enable-symbol-highlighting nil)
9
10  (lsp-register-client
11   (make-lsp-client
12    :new-connection
13    (lsp-tramp-connection
14     (lambda ()
15       (cons "clangd-12" ; executable name on remote machine 'ccls'
16            lsp-clients-clangd-args)))
17    :major-modes '(c-mode c++-mode objc-mode cuda-mode)

```

```

18 :remote? t
19 :server-id 'clangd-remote)))

```

**VHDL** By default, LSP uses the proprietary VHDL-Tool to provide LSP features; however, there is free and open source alternatives: `ghdl-ls` and `rust_hdl`. I have some issues running `ghdl-ls` installed from pip through the `pyghdl` package, so let's use `rust_hdl` instead.

```

1 (use-package! vhd-mode
2   ;; Required unless vhd_ls is on the $PATH
3   :config
4   (setq lsp-vhdl-server-path "~/Projects/foss/rust_hdl/target/release/vhdl_ls"
5         lsp-vhdl-server 'vhdl-ls
6         lsp-vhdl--params nil)
7   (require 'lsp-vhdl)
8
9   :hook (vhd-mode . (lambda ()
10                      (lsp t)
11                      (flycheck-mode t))))

```

```

1 (package! lsp-sonarlint)

```

### SonarLint

```

1 ;; TODO: configure it, for the moment, it seems that it doesn't support C/C++

```

#### 6.4.8 Cppcheck

Check for everything!

```

1 (after! flycheck
2   (setq flycheck-cppcheck-checks '("information"
3                                   "missingInclude"
4                                   "performance"
5                                   "portability"
6                                   "style"
7                                   "unusedFunction"
8                                   "warning"))) ;; Actually, we can use "all"

```

#### 6.4.9 Project CMake

A good new package to facilitate using CMake projects with Emacs, it glues together `project`, `eglot`, `cmake` and `clangd`.

```

1 (package! project-cmake
2   :disable (not (featurep! :tools lsp +eglot)) ; Enable only if (lsp +eglot) is used
3   :recipe (:host github
4           :repo "juanjosegarciaripoll/project-cmake"))

```

```

1 (use-package! project-cmake
2   :config
3   (require 'eglot)
4   (project-cmake-scan-kits)
5   (project-cmake-eglot-integration))

```

### 6.4.10 Clang-format

```
1 (package! clang-format)
```

```
1 (use-package! clang-format
2   :when CLANG-FORMAT-P
3   :commands (clang-format-region))
```

### 6.4.11 Auto-include C++ headers

```
1 (package! cpp-auto-include
2   :recipe (:host github
3           :repo "emacsorphanage/cpp-auto-include"))
```

```
1 (use-package! cpp-auto-include
2   :commands cpp-auto-include)
```

### 6.4.12 Emacs Refactor

```
1 (package! erefactor
2   :recipe (:host github
3           :repo "mhayashi1120/Emacs-erefactor"))
```

```
1 (use-package! erefactor
2   :defer t)
```

## 6.5 Symbols

### 6.5.1 Emojify

For starters, twitter's emojis look nicer than emoji-one. Other than that, this is pretty great OOTB .

```
1 (setq emojiify-emoji-set "twemoji-v2")
```

One minor annoyance is the use of emojis over the default character when the default is actually preferred. This occurs with overlay symbols I use in Org mode, such as checkbox state, and a few other miscellaneous cases.

We can accommodate our preferences by deleting those entries from the emoji hash table

[illegible]

Now, it would be good to have a minor mode which allowed you to type ascii/gh emojis and get them converted to unicode. Let's make one.

```

1 (defun emojiify--replace-text-with-emoji (orig-fn emoji text buffer start end &optional target)
2   "Modify `emojiify--proptertize-text-for-emoji' to replace ascii/github emoticons with unicode emojis, on the
   ↪ fly."
3   (if (or (not emoticon-to-emoji) (= 1 (length text)))
4       (funcall orig-fn emoji text buffer start end target)
5       (delete-region start end)
6       (insert (ht-get emoji "unicode"))))
7
8 (define-minor-mode emoticon-to-emoji
9   "Write ascii/gh emojis, and have them converted to unicode live."
10  :global nil
11  :init-value nil
12  (if emoticon-to-emoji
13      (progn
14        (setq-local emojiify-emoji-styles '(ascii github unicode))
15        (advice-add 'emojiify--proptertize-text-for-emoji :around #'emojiify--replace-text-with-emoji)
16        (unless emojiify-mode
17          (emojiify-turn-on-emojiify-mode)))
18      (setq-local emojiify-emoji-styles (default-value 'emojiify-emoji-styles))
19      (advice-remove 'emojiify--proptertize-text-for-emoji #'emojiify--replace-text-with-emoji)))

```

This new minor mode of ours will be nice for messages, so let's hook it in for Email and IRC.

```

1 (add-hook! '(mu4e-compose-mode org-msg-edit-mode circe-channel-mode) (emoticon-to-emoji 1))

```

### 6.5.2 Ligatures

Extra ligatures are good, however, I'd like to see my keywords! Lets disable them in C/C++, Rust and Python modes.

```

1 (setq +ligatures-extras-in-modes '(not c-mode c++-mode rust-mode python-mode))

```

## 6.6 Checkers (spell & grammar)

### 6.6.1 Install back-end

For flyspell + hunspell

```
sudo pacman -S hunspell hunspell-en_US hunspell-en_GB hunspell-fr
```

For spell-fu

```
sudo pacman -S aspell aspell-en aspell-fr
```

### 6.6.2 Spell-Fu

Now, spell-fu supports multiple languages! Lets add English, French and Arabic. So I can “mélanger les langues sans avoir de problèmes!”.

```

1 (after! spell-fu
2   (defun +spell-fu-register-dictionary (lang)
3     "Add `LANG` to spell-fu multi-dict, with a personal dictionary."
4     ;; Add the dictionary
5     (spell-fu-dictionary-add (spell-fu-get-ispell-dictionary lang))
6     (let ((personal-dict-file (expand-file-name (format "aspell.%s.pws" lang) doom-private-dir)))
7       ;; Create an empty personal dictionary if it doesn't exists
8       (unless (file-exists-p personal-dict-file) (write-region "" nil personal-dict-file))
9       ;; Add the personal dictionary

```

## 6.8 Features

### 6.8.1 Weather

```

1 ;; lisp/wttrin/wttrin.el taken from:
2 ;; https://raw.githubusercontent.com/tecosaur/emacs-config/master/lisp/wttrin/wttrin.el
3 (package! wttrin
4   :recipe (:local-repo "lisp/wttrin"))

```

```

1 (use-package! wttrin
2   :commands wttrin)

```

### 6.8.2 OpenStreetMap

```

1 (package! osm)

```

```

1 (use-package! osm
2   :commands (osm-home
3             osm-search
4             osm-server
5             osm-goto
6             osm-gpx-show
7             osm-bookmark-jump)
8
9   :custom
10  ;; Take a look at the customization group `osm' for more options.
11  (osm-server 'default) ;; Configure the tile server
12  (osm-copyright t)    ;; Display the copyright information
13
14  :init
15  (setq osm-tile-directory (expand-file-name "osm" doom-etc-dir))
16  ;; Load Org link support
17  (with-eval-after-load 'org
18    (require 'osm-ol)))

```

### 6.8.3 Islamic prayer times

```

1 (package! awqat
2   :recipe (:host github
3           :repo "zkry/awqat"))

```

```

1 (use-package! awqat
2   :commands (awqat-display-prayer-time-mode awqat-times-for-day)
3   :config
4   ;; Make sure `calendar-latitude' and `calendar-longitude' are set,
5   ;; otherwise, set them here.
6   (setq awqat-asr-hanafi nil
7         awqat-mode-line-format "  ${prayer} (${hours}h${minutes}m)")
8   (awqat-set-preset-french-muslims))

```

#### 6.8.4 Info colors

Better colors for manual pages.

```

1 (package! info-colors)

```

```

1 (use-package! info-colors
2   :commands (info-colors-fontify-node))
3
4 (add-hook 'Info-selection-hook 'info-colors-fontify-node)

```

#### 6.8.5 Zotero Zotxt

```

1 (package! zotxt)

```

```

1 (use-package! zotxt
2   :when ZOTERO-P
3   :commands org-zotxt-mode)

```

#### 6.8.6 CRDT

Collaborative editing for geeks! `crdt.el` adds support for *Conflict-free Replicated Data Type*.

```

1 (package! crdt)

```

```

1 (use-package! crdt
2   :commands (crdt-share-buffer
3             crdt-connect
4             crdt-visualize-author-mode
5             crdt-org-sync-overlay-mode))

```

#### 6.8.7 The Silver Searcher

An Emacs front-end to *The Silver Searcher*, first we need to install `ag` using `sudo pacman -S the_silver_searcher`.

```

1 (package! ag)

```

```

1 (use-package! ag
2   :when AG-P
3   :commands (ag
4             ag-files
5             ag-regex
6             ag-project
7             ag-project-files
8             ag-project-regex))

```

### 6.8.8 Emacs Application Framework

EAF is presented as: *A free/libre and open-source extensible framework that revolutionizes the graphical capabilities of Emacs.* Or the key to ultimately *Live in Emacs.*

First, install EAF as specified in the project's readme. To update EAF, we need to run `git pull ; ./install-eaf.py` in `lisp/emacs-application-framework` and `(M-x eaf-install-and-update)` in Emacs. This updates EAF, applications and their dependencies.

```

60
61      (add-hook 'nov-mode-hook #'nov-mode-setup))

```

## 7.3 News feed *elfeed*

Set RSS news feeds

```

1 (setq elfeed-feeds
2   '("https://this-week-in-rust.org/rss.xml"
3     "https://www.omgubuntu.co.uk/feed"
4     "https://itsfoss.com/feed"
5     "https://linuxhandbook.com/feed"
6     "https://spectrum.ieee.org/rss/robotics/fulltext"
7     "https://spectrum.ieee.org/rss/aerospace/fulltext"
8     "https://spectrum.ieee.org/rss/computing/fulltext"
9     "https://spectrum.ieee.org/rss/blog/automaton/fulltext"
10    "https://developers.redhat.com/blog/feed"
11    "https://lwn.net/headlines/rss"))

```

## 7.4 VPN configuration

### 7.4.1 NetExtender wrapper

I store my NetExtender VPN parameters in a GPG encrypted file. The credentials file contains a line of private parameters to pass to `netExtender`, like this:

```

1 echo "-u <USERNAME> -d <DOMAINE> -p <PASSWORD> -s <SERVER_IP>" \
2 | gpg -c > sslvpn.gpg

```

Then I like to have a simple script which decrypt the credentials and launch a session via the `netExtender` command.

```

1 #!/bin/bash
2
3 if ! command -v netExtender &> /dev/null
4 then
5   echo "netExtender not found, installing from AUR using 'yay'"
6   yay -S netextender
7 fi
8
9 MY_LOGIN_PARAMS_FILE="$HOME/.ssh/sslvpn.gpg"
10
11 echo "Y\n" | netExtender --auto-reconnect \
12   $(gpg -q --for-your-eyes-only --no-tty -d ${MY_LOGIN_PARAMS_FILE})

```

### 7.4.2 Emacs + NetExtender

```

1 (when NETEXTENDER-P
2   (defvar +netextender-process-name "netextender")
3   (defvar +netextender-buffer-name " *NetExtender*")
4   (defvar +netextender-command '("~/local/bin/netextender"))

```

```

5
6 (defun +netextender-start ()
7   "Launch a NetExtender VPN session"
8   (interactive)
9   (unless (get-process +netextender-process-name)
10    (if (make-process :name +netextender-process-name
11                     :buffer +netextender-buffer-name
12                     :command +netextender-command)
13        (message "Started NetExtender VPN session")
14        (message "Cannot start NetExtender"))))
15
16 (defun +netextender-kill ()
17   "Kill the created NetExtender VPN session"
18   (interactive)
19   (when (get-process +netextender-process-name)
20    (if (kill-buffer +netextender-buffer-name)
21        (message "Killed NetExtender VPN session")
22        (message "Cannot kill NetExtender"))))

```

## 7.5 Email mu4e

Configuring mu4e email accounts, note that you need to have a proper `mbsyncrc` file in the right directory.

### 7.5.1 mbsync

You will need to:

- Install mu and isync (`sudo pacman -S mu isync`)
- Set up a proper configuration file for your accounts at `~/.mbsyncrc`
- Run `mu init --maildir=~/.Maildir --my-address=user@host1 --my-address=user@host2`
- Run `mbsync -c ~/.mbsyncrc -a`
- For sending mails from mu4e, add a `~/.authinfo` file, file contains a line in this format `machine MAIL.DOMAIN.TLD port 587 login USER password PASSWD`
- Encrypt the `~/.authinfo` file using GPG `gpg -c ~/.authinfo` and delete the original unencrypted file.

I use a `mbsyncrc` file for multi-accounts, with some hacks for Gmail accounts (to rename the `[Gmail]/...` folders). Here is an explained configuration example.

```

1 # mbsync config file
2 # GLOBAL OPTIONS
3 BufferLimit 50mb           # Global option: Default buffer size is 10M, too small for modern machines.
4 Sync All                  # Channels global: Sync everything "Pull Push New ReNew Delete Flags" (default
5   ⇨ option)
6 Create Both              # Channels global: Automatically create missing mailboxes on both sides
7 Expunge Both             # Channels global: Delete messages marked for deletion on both sides
8 CopyArrivalDate yes      # Channels global: Propagate arrival time with the messages
9

### 7.5.2 msmtprc

I was using the standard `smtpmail` to send mails; but recently, I'm getting problems when sending mails. I passed a whole day trying to fix mail sending for one of my accounts, at the end of the day, I got a working setup; BUT, sending the first mail always ask me about password! I need to enter the password to be able to send the mail, Emacs asks me then if I want to save it to `~/.authinfo.gpg`, when I confirm saving it, it got duplicated in the `authinfo.gpg` file.

This seems to be a bug; and I found somewhere that `smtpmai` is buggy, and that `msmtp` seems to be a good alternative, so now I'm using a `msmtp`-based setup.

For this, we will need an additional configuration file, `~/.msmtprc`, I configure it the same way as `mbsync`, I extract the passwords from `~/.authinfo.gpg` using GPG and `awk`.

The following is a sample file `~/.msmtprc`.

```

1  # Set default values for all following accounts.
2  defaults
3  auth                on
4  tls                 on
5  tls_starttls        on
6  tls_trust_file       /etc/ssl/certs/ca-certificates.crt
7  logfile              ~/.msmtp.log
8
9  # Gmail
10 account              gmail
11 auth                 plain
12 host                 smtp.googlemail.com
13 port                 587
14 from                 username@gmail.com
15 user                 username
16 password             "gpg -q --for-your-eyes-only --no-tty --logger-file /dev/null --batch -d
    ↪ ~/.authinfo.gpg | awk '/machine smtp.googlemail.com login .*/@gmail.com/ {print $NF}'"
17 add_missing_date_header on

```

```

18
19 ## Gmail - aliases
20 account          alias-account : gmail
21 from             alias@mail.com
22
23 account          other-alias : gmail
24 from             other.alias@address.org
25
26 # Work
27 account          work

```

### 7.5.3 mu4e

Add mu4e to path if it exists on the file system.

```

1 (add-to-list 'load-path "/usr/local/share/emacs/site-lisp/mu4e")

```

I configure my email accounts in a private file in `lisp/private/+mu4e-accounts.el`, which will be loaded after this common part:

```

1 (after! mu4e
2   (require 'org-msg)
3   (require 'smtpmail)
4   (require 'mu4e-contrib)
5   (require 'mu4e-icalendar)
6   (require 'org-agenda)
7
8   ;; Common parameters
9   (setq mu4e-update-interval (* 3 60) ;; Every 3 min
10         mu4e-index-update-error-warning nil ;; Do not show warning after update
11         mu4e-get-mail-command "mbsync -a" ;; Not needed, as +mu4e-backend is 'mbsync by default
12         mu4e-main-hide-personal-addresses t ;; No need to display a long list of my own addresses!
13         mu4e-attachment-dir (expand-file-name "~/Maildir/attachements")
14         mu4e-sent-messages-behavior 'sent ;; Save sent messages
15         mu4e-context-policy 'pick-first ;; Start with the first context
16         mu4e-compose-context-policy 'ask) ;; Always ask which context to use when composing a new mail
17
18   ;; Use msmtplib instead of smtpmail
19   (setq sendmail-program "/usr/bin/msmtp"
20         message-sendmail-f-is-evil t
21         message-sendmail-envelope-from 'header
22         message-sendmail-extra-arguments '("--read-envelope-from") ;; "--read-recipients"
23         message-send-mail-function #'message-send-mail-with-sendmail
24         send-mail-function #'smtpmail-send-it
25         mail-specify-envelope-from t
26         mail-envelope-from 'header)
27
28   (setq mu4e-headers-fields '(:flags . 6) ;; 3 flags
29         (:account-stripe . 2)

```

## 7.7 Multimedia

I like to use a MPD powered EMMS, so when I restart Emacs I do not lost my music.

### 7.7.1 MPD, MPC, and MPV

```

1 ;; Not sure if it is required!
2 (after! mpc
3   (setq mpc-host "localhost:6600"))

```

I like to launch the music daemon `mpd` using `Systemd`, lets define some commands in Emacs to start/kill the server:

```

1 (defun +mpd-daemon-start ()
2   "Start MPD, connects to it and syncs the metadata cache."
3   (interactive)
4   (let ((mpd-daemon-running-p (+mpd-daemon-running-p)))
5     (unless mpd-daemon-running-p
6       ;; Start the daemon if it is not already running.
7       (setq mpd-daemon-running-p (zerop (call-process "systemctl" nil nil nil "--user" "start" "mpd.service"))))
8     (cond ((+mpd-daemon-running-p)
9            (+mpd-mpc-update)
10            (emms-player-mpd-connect)
11            (emms-cache-set-from-mpd-all)
12            (message "Connected to MPD!"))
13          (t
14            (warn "An error occured when trying to start Systemd mpd.service."))))))
15
16 (defun +mpd-daemon-stop ()
17   "Stops playback and kill the MPD daemon."
18   (interactive)
19   (emms-stop)
20   (call-process "systemctl" nil nil nil "--user" "stop" "mpd.service")
21   (message "MPD stopped!"))
22
23 (defun +mpd-daemon-running-p ()
24   "Check if the MPD service is running."
25   (zerop (call-process "systemctl" nil nil nil "--user" "is-active" "--quiet" "mpd.service")))
26
27 (defun +mpd-mpc-update ()

```

```

28 "Updates the MPD database synchronously."
29 (interactive)
30 (if (zerop (call-process "mpc" nil nil nil "update"))
31     (message "MPD database updated!")
32     (warn "An error occurred when trying to update MPD database.")))

```

### 7.7.2 EMMS

Now, we configure EMMS to use MPD if it is present; otherwise, it uses whatever default backend EMMS is using.

```

1 (after! emms
2   ;; EMMS basic configuration
3   (require 'emms-setup)
4
5   (when MPD-P
6     (require 'emms-player-mpd))
7
8   (emms-all)
9   (emms-default-players)
10
11  (setq emms-source-file-default-directory "~/Music/"
12        ;; Load cover images
13        emms-browser-covers 'emms-browser-cache-thumbnail-async
14        emms-seek-seconds 5)
15
16  (if MPD-P
17      ;; If using MPD as backend
18      (setq emms-player-list '(emms-player-mpd)
19            emms-info-functions '(emms-info-mpd)
20            emms-player-mpd-server-name "localhost"
21            emms-player-mpd-server-port "6600"
22            emms-player-mpd-music-directory (expand-file-name "~/Music"))
23      ;; Use whatever backend EMMS is using by default (VLC in my machine)

### 7.7.3 Elfeed :heart: MPV

<https://sqrtminusone.xyz/posts/2021-09-07-emms/>

Install yt-rss from Git:

```

1 YT_RSS_DIR=~/.local/share/yt-rss
2 git clone https://github.com/SqrtMinusOne/yt-rss.git $YT_RSS_DIR
3 cd $YT_RSS_DIR
4 pip install -r requirements.txt
5 gunicorn main:app

```

```

1 (after! (elfeed emms)
2   (when MPV-P
3     ;; Integration with Elfeed
4     (define-emms-source elfeed (entry)
5       (let ((track (emms-track
6                     'url (+get-youtube-url (elfeed-entry-link entry)))))
7         (emms-track-set track 'info-title (elfeed-entry-title entry))
8         (emms-playlist-insert-track track)))
9
10    (defun +elfeed-add-emms-youtube ()
11      (interactive)
12      (emms-add-elfeed elfeed-show-entry)
13      (elfeed-tag elfeed-show-entry 'watched)
14      (elfeed-show-refresh))
15
16    (defun +elfeed-search-filter-source (entry)
17      "Filter elfeed search buffer by the feed under cursor."
18      (interactive (list (elfeed-search-selected :ignore-region)))
19      (when (elfeed-entry-p entry)
20        (elfeed-search-set-filter
21          (concat
22            "@6-months-ago "
23            "+unread "
24            "="
25            (replace-regexp-in-string
26              (rx "?" (* not-newline) eos)
27              ""
28              (elfeed-feed-url (elfeed-entry-feed entry)))))))

```

### 7.7.4 Keybindings

Lastly, let's define keybindings for these commands, under `<leader> l m`.

```

1 (map! :leader :prefix ("l" . "custom")
2   (:when (featurep! :app emms)
3     :prefix-map ("m" . "media")
4     :desc "Playlist go" "g" #'emms-playlist-mode-go
5     :desc "Add playlist" "D" #'emms-add-playlist
6     :desc "Toggle random playlist" "r" #'emms-toggle-random-playlist
7     :desc "Add directory" "d" #'emms-add-directory
8     :desc "Add file" "f" #'emms-add-file
9     :desc "Smart browse" "b" #'emms-smart-browse
10    :desc "Play/Pause" "p" #'emms-pause
11    :desc "Start" "S" #'emms-start
12    :desc "Start" "S" #'emms-start
13    :desc "Stop" "s" #'emms-stop))
14

```

Then we add MPD related keybindings if MPD is used.

```

1 (map! :leader
2   :prefix ("l m")
3   (:when (and (featurep! :app emms) MPD-P)
4     :prefix-map ("m" . "mpd/mpc")
5     :desc "Start daemon" "s" #'mpd-daemon-start
6     :desc "Stop daemon" "k" #'mpd-daemon-stop
7     :desc "EMMS player (MPD update)" "R" #'emms-player-mpd-update-all-reset-cache
8     :desc "Update database" "u" #'mpd-mpc-update))

```

### 7.7.5 Cycle song information in mode line

I found a useful package named `emms-mode-line-cycle` which permits to do this; however, it has not been updated since a while, it uses some obsolete functions to draw icon in mode line, so I forked it, got rid of the problematic parts, and added some minor stuff.

```

1 (package! emms-mode-line-cycle
2   :recipe (:host github
3     :repo "abougouffa/emms-mode-line-cycle"))

```

```

1 (use-package! emms-mode-line-cycle
2   :after emms
3   :config
4   (setq emms-mode-line-cycle-max-width 15
5         emms-mode-line-cycle-additional-space-num 4
6         emms-mode-line-cycle-any-width-p nil
7         emms-mode-line-cycle-velocity 4)
8
9   ;; Some music files do not have metadata, by default, the track title
10  ;; will be the full file path, so, if I detect what seems to be an absolute
11  ;; path, I trim the directory part and get only the file name.
12  (setq emms-mode-line-cycle-current-title-function
13        (lambda ()
14          (let ((name (emms-track-description (emms-playlist-current-selected-track))))
15            (if (file-name-absolute-p name) (file-name-base name) name))))
16
17  ;; Mode line formatting settings
18  ;; This format complements the 'emms-mode-line-format' one.
19  (setq emms-mode-line-format " %s " ;;
20        ;; To hide the playing time without stopping the cycling.
21        emms-playing-time-display-format "")
22
23  (defun +emms-mode-line-toggle-format-hook ()

```

```

24 "Toggle the 'emms-mode-line-format' string, when playing or paused."
25 (setq emms-mode-line-format (concat " " (if emms-player-paused-p " " " ") " %s "))
26 ;; Force a sync to get the right song name over MPD in mode line
27 (when MPD-P (emms-player-mpd-sync-from-mpd))
28 ;; Trigger a forced update of mode line (useful when pausing)
29 (emms-mode-line-alter-mode-line))
30
31 ;; Hook the function to the 'emms-player-paused-hook'
32 (add-hook 'emms-player-paused-hook '+emms-mode-line-toggle-format-hook)
33
34 (emms-mode-line-cycle 1))

```

## 7.8 Maxima

The Maxima CAS comes bundled with three Emacs modes: `maxima`, `imaxima` and `emaxima`; installed by default in `"/usr/share/emacs/site-lisp/maxima"`.

### 7.8.1 Maxima

The `emacs-mirror/maxima` seems more up-to-date, and supports completion via `Company`, so let's install it from Github. Note that, normally, we don't need to specify a recipe; however, installing it directly seems to not install `company-maxima.el` and `poly-maxima.el`.

```

1 (package! maxima
2   :recipe (:host github
3           :repo "emacs-mirror/maxima"
4           :files (:defaults
5                  "keywords"
6                  "company-maxima.el"
7                  "poly-maxima.el")))

```

```

1 (use-package! maxima
2   :when MAXIMA-P
3   :commands (maxima-mode maxima-inferior-mode maxima)
4   :init
5   (require 'straight) ;; to use `straight-build-dir' and `straight-base-dir'
6   (setq maxima-font-lock-keywords-directory ;; a workaround to undo the straight workaround!
7         (expand-file-name (format "straight/%s/maxima/keywords" straight-build-dir) straight-base-dir))
8
9   ;; The `maxima-hook-function' setup `company-maxima'.
10  (add-hook 'maxima-mode-hook #'maxima-hook-function)
11  (add-hook 'maxima-inferior-mode-hook #'maxima-hook-function)
12  (add-to-list 'auto-mode-alist '("\\.ma[.c]*$" . maxima-mode)))

```

### 7.8.2 IMaxima

For the `imaxima` (Maxima with image support), the `emacs-sattic/imaxima` seems outdated compared to the `imaxima` package of the official Maxima distribution, so let's install `imaxima` from the source code of Maxima, hosted on Sourceforge [git.code.sf.net/p/maxima/code](https://git.code.sf.net/p/maxima/code). The package files are stored in the repository's sub-directory `interfaces/emacs/imaxima`.

```

1 ;; Use the `imaxima' package bundled with the official Maxima distribution.
2 (package! imaxima
3   :recipe (:host nil ;; Unsupported host, we will specify the complete repo link
4           :repo "https://git.code.sf.net/p/maxima/code"
5           :files ("interfaces/emacs/imaxima/*")))

```

```

1 (use-package! imaxima
2   :when MAXIMA-P
3   :commands (imaxima imath-mode)
4   :init
5   (setq imaxima-use-maxima-mode-flag nil ;; otherwise, it don't render equations with LaTeX.
6     imaxima-scale-factor 2.0)
7
8   ;; Hook the `maxima-inferior-mode' to get Company completion.
9   (add-hook 'imaxima-startup-hook #'maxima-inferior-mode))

```

## 7.9 FriCAS

The FriCAS comes bundled with an Emacs mode, lets load it.

```

1 (use-package! fricas
2   :when FRICAS-P
3   :load-path "/usr/lib/fricas/emacs"
4   :commands (fricas-mode fricas-eval fricas))

```

## 8 Programming

### 8.1 File templates

For some file types, we overwrite defaults in the snippets directory, others need to have a template assigned.

```

1 (set-file-template! "\\*.tex$" :trigger "__" :mode 'latex-mode)
2 (set-file-template! "\\*.org$" :trigger "__" :mode 'org-mode)
3 (set-file-template! "/LICEN[CS]E$" :trigger '+file-templates/insert-license)

```

### 8.2 CSV rainbow

Stolen from here.

```

1 (after! csv-mode
2   ;; TODO: Need to fix the case of two commas, example "a,b,,c,d"
3   (require 'cl-lib)
4   (require 'color)
5
6   (map! :localleader
7     :map csv-mode-map
8     "R" #' +csv-rainbow)
9
10  (defun +csv-rainbow (&optional separator)
11    (interactive (list (when current-prefix-arg (read-char "Separator: "))))
12    (font-lock-mode 1)
13    (let* ((separator (or separator ?\,))
14           (n (count-matches (string separator) (point-at-bol) (point-at-eol)))
15           (colors (cl-loop for i from 0 to 1.0 by (/ 2.0 n)
16                           collect (apply #'color-rgb-to-hex
17                                           (color-hsl-to-rgb i 0.3 0.5))))
18           (cl-loop for i from 2 to n by 2
19                     for c in colors
20                     for r = (format "~\\([~%c\\n]+%c\\)\\{d\\}" separator separator i)
21                     do (font-lock-add-keywords nil `((,r (1 '(face (:foreground ,c))))))))
22
23  ;; provide CSV mode setup
24  ;; (add-hook 'csv-mode-hook (lambda () (+csv-rainbow)))

```

## 8.3 Vim

```
1 (package! vimrc-mode
2   :recipe (:host github
3           :repo "mcandre/vimrc-mode"))
```

```
1 (use-package! vimrc-mode
2   :mode "\\..vim\\(rc\\)?\\")
```

## 8.4 ESS

View data frames better with

```
1 (package! ess-view)
```

## 8.5 GNU Octave

Files with .m extension gets recognized automatically as Objective C files. Lets change this to be recognized as Octave/Matlab files.

```
1 (add-to-list 'auto-mode-alist '("\\.m\\") . octave-mode))
```

## 8.6 ROS

### 8.6.1 Extensions

Add ROS specific file formats:

```
1 (add-to-list 'auto-mode-alist '("\\.rviz\\") . conf-unix-mode))
2 (add-to-list 'auto-mode-alist '("\\.urdf\\") . xml-mode))
3 (add-to-list 'auto-mode-alist '("\\.xacro\\") . xml-mode))
4 (add-to-list 'auto-mode-alist '("\\.launch\\") . xml-mode))
5
6 ;; Use gdb-script-mode for msg and srv files
7 (add-to-list 'auto-mode-alist '("\\.msg\\") . gdb-script-mode))
8 (add-to-list 'auto-mode-alist '("\\.srv\\") . gdb-script-mode))
9 (add-to-list 'auto-mode-alist '("\\.action\\") . gdb-script-mode))
```

### 8.6.2 ROS bags

Mode to view ROS .bag files. Taken from code-iai/ros\_emacs\_utils.

```
1 (when ROSBAG-P
2   (define-derived-mode rosbag-view-mode
3     fundamental-mode "Rosbag view mode"
4     "Major mode for viewing ROS bag files."
5     (let ((f (buffer-file-name)))
6       (let ((buffer-read-only nil))
7         (erase-buffer)
8         (message "Calling rosbag info")
9         (call-process "rosbag" nil (current-buffer) nil
10                      "info" f)
11         (set-buffer-modified-p nil))
12     (view-mode)
13     (set-visited-file-name nil t)))
```

```

14
15 ;; rosbag view mode
16 (add-to-list 'auto-mode-alist '("\\.bag$" . rosbag-view-mode)))

```

### 8.6.3 ros.el

I found this awesome `ros.el` package made by Max Beutelspacher, which facilitate working with ROS machines, supports ROS1 and ROS2, with local workspaces or remote ones (over Trump!).

```

1 ;; `ros.el' depends on `with-shell-interpreter' among other packages
2 ;; See: https://github.com/DerBeutlin/ros.el/blob/master/Cask
3 (package! with-shell-interpreter)
4 (package! ros
5   :recipe (:host github
6            :repo "DerBeutlin/ros.el"))

```

Now, we configure the ROS1/ROS2 workspaces to work on. But before that, we need to install some tools on the ROS machine, and build the workspace for the first time using `colcon build`, the repository contains example Docker files for Noetic and Foxy.

```

1 (use-package! ros
2   :init
3   (map! :leader
4         :prefix ("l" . "custom")
5         :desc "Hydra ROS" "r" #'hydra-ros-main/body)
6   :commands (hydra-ros-main/body ros-set-workspace)
7   :config
8   (setq ros-workspaces
9         (list (ros-dump-workspace
10                :tramp-prefix (format "/docker:%s@%s:" "ros" "ros-machine")
11                :workspace "~/ros_ws"
12                :extends '("/opt/ros/noetic/"))
13               (ros-dump-workspace
14                :tramp-prefix (format "/ssh:%s@%s:" "swd_sk" "172.16.96.42")
15                :workspace "~/ros_ws"
16                :extends '("/opt/ros/noetic/"))
17               (ros-dump-workspace
18                :tramp-prefix (format "/ssh:%s@%s:" "swd_sk" "172.16.96.42")
19                :workspace "~/ros2_ws"
20                :extends '("/opt/ros/foxy/"))))))

```

## 8.7 Scheme

```

1 (after! geiser
2   (setq geiser-default-implementation 'guile
3         geiser-chez-binary "chez-scheme")) ;; default is "scheme"

```

## 8.8 Embedded systems

### 8.8.1 Embed.el

Some embedded systems development tools.

TODO: Try to integrate embedded debuggers adapters with `dap-mode`:

- probe-rs-debugger
- stm32-emacs
- cortex-debug with potential integration with DAP

- esp-debug-adapter

```

1 (package! embed
2   :recipe (:host github
3           :repo "sjsch/embed-el"))

```

```

1 (use-package! embed
2   :commands (embed-openocd-start
3             embed-openocd-stop
4             embed-openocd-gdb
5             embed-openocd-flash)
6
7   :init
8   (map! :leader :prefix ("l" . "custom")
9         (:when (featurep! :tools debugger +lsp)
10              :prefix-map ("e" . "embedded")
11              :desc "Start OpenOCD"      "o" #'embed-openocd-start
12              :desc "Stop OpenOCD"       "O" #'embed-openocd-stop
13              :desc "OpenOCD GDB"        "g" #'embed-openocd-gdb
14              :desc "OpenOCD flash"      "f" #'embed-openocd-flash)))

```

### 8.8.2 Arduino

```

1 (package! arduino-mode
2   :recipe (:host github
3           :repo "bookest/arduino-mode"))

```

### 8.8.3 Bitbake (Yocto)

Add support for Yocto Project files.

```

1 (package! bitbake-modes
2   :recipe (:host bitbucket
3           :repo "olaniilsson/bitbake-modes"))

```

```

1 (use-package! bitbake-modes
2   :commands (wks-mode
3             mmm-mode
4             bb-sh-mode
5             bb-scc-mode
6             bitbake-mode
7             conf-bitbake-mode
8             bitbake-task-log-mode))

```

## 8.9 Debugging

### 8.9.1 DAP

I like to use `cpptools` over `webfreak.debug`. So I enable it after loading `dap-mode`. I like also to have a mode minimal UI. And I like to trigger `dap-hydra` when the program hits a break point, and automatically delete the session and close Hydra when DAP is terminated.

```

1 (unpin! dap-mode)

```

```

1 (after! dap-mode
2   (require 'dap-cpptools)
3
4   ;; More minimal UI
5   (setq dap-auto-configure-features '(locals tooltip)
6         dap-auto-show-output nil ;; Hide the annoying server output
7         lsp-enable-dap-auto-configure t)
8
9   ;; Automatically trigger dap-hydra when a program hits a breakpoint.
10  (add-hook 'dap-stopped-hook (lambda (arg) (call-interactively #'dap-hydra)))
11
12  ;; Automatically delete session and close dap-hydra when DAP is terminated.
13  (add-hook 'dap-terminated-hook
14    (lambda (arg)
15      (call-interactively #'dap-delete-session)
16      (dap-hydra/nil)))
17
18  ;; A workaround to correctly show breakpoints
19  ;; from: https://github.com/emacs-lsp/dap-mode/issues/374#issuecomment-1140399819
20  (add-hook! +dap-running-session-mode
21    (set-window-buffer nil (current-buffer))))

```

**Doom store** Doom Emacs stores session information persistently using the core **store** mechanism. However, relaunching a new session doesn't overwrite the last stored session, to do so, I define a helper function to clear data stored in the "+debugger" location. (see `+debugger--get-last-config` function.)

```

1 (defun +debugger/clear-last-session ()
2   "Clear the last stored session"
3   (interactive)
4   (doom-store-clear "+debugger"))
5
6 (map! :leader :prefix ("l" . "custom")
7   (:when (featurep! :tools debugger +lsp)
8     :prefix-map ("d" . "debugger")
9     :desc "Clear last DAP session" "c" #' +debugger/clear-last-session))

```

### 8.9.2 The Grand “Cathedral” Debugger

For C/C++, DAP mode is missing so much features. In my experience, both `cpptools` and `gdb` DAP interfaces aren't mature, it stops and disconnect while debugging, making it a double pain.

**Additional commands** There is no best than using pure GDB, it makes debugging more flexible. Lets define some missing GDB commands, add them to Hydra keys, and define some reverse debugging commands for usage with `rr` (which we can use by substituting `gdb` by `rr replay` when starting the session).

```

1 (after! realgud
2   (require 'hydra)
3
4   ;; Add some missing gdb/rr commands
5   (defun +realgud:cmd-start (arg)
6     "start = break main + run"
7     (interactive "p")
8     (realgud-command "start"))
9
10  (defun +realgud:cmd-reverse-next (arg)
11    "Reverse next"
12    (interactive "p")
13    (realgud-command "reverse-next"))
14
15  (defun +realgud:cmd-reverse-step (arg)
16    "Reverse step"
17    (interactive "p"))

```

```

18 (realgud-command "reverse-step"))
19
20 (defun +realgud:cmd-reverse-continue (arg)
21   "Reverse continue"
22   (interactive "p")
23   (realgud-command "reverse-continue"))
24
25 (defun +realgud:cmd-reverse-finish (arg)
26   "Reverse finish"
27   (interactive "p")
28   (realgud-command "reverse-finish"))
29
30 ;; Define a hydra binding
31 (defhydra realgud-hydra (:color pink :hint nil :foreign-keys run)
32   "
33   Stepping | _n_: next      | _i_: step   | _o_: finish | _c_: continue | _R_: restart | _u_:

60   ("Sg" realgud:gdb)
61   ("Ss" +realgud:cmd-start)
62   ("q" nil "quit" :color blue) ;; :exit
63   ("Qq" realgud:cmd-quit :color blue)) ;; :exit
64
65 (defun +debugger/realgud:gdb-hydra ()
66   "Run `realgud-hydra'."
67   (interactive)
68   (realgud-hydra/body))
69
70 (map! :leader :prefix ("l" . "custom")
71   (:when (featurep! :tools debugger)
72     :prefix-map ("d" . "debugger")
73     :desc "RealGUD hydra" "h" #' +debugger/realgud:gdb-hydra)))

```

**RealGUD .dir-locals.el support** I do a lot of development on C/C++ apps that gets data from command line arguments, which means I have to type my arguments manually after calling `realgud:gdb`, which is very annoying.

For DAP mode, there is a support for either `dap-debug-edit-template`, or `launch.json`. For RealGUD though, I didn't find any ready-to-use feature like this. So I define a parameter list named `+realgud:launch-plist`, which supports `:program` and `:args`. The first is a string of the program path, and the second is a list of string arguments to pass to the program.

```

1 ;; A variable which to be used in .dir-locals.el, formatted as a property list;
2 ;; '(:program "...":args ("args1" "arg2" ...))
3 ;; "${workspaceFolder}" => gets replaced with project workspace (from projectile)
4 ;; "${workspaceFolderBasename}" => gets replaced with project workspace's basename
5 (defvar +realgud:launch-plist nil)

```

This variable is set in a per-project basis thanks to `.dir-locals.el`, some thing like this:

```

1 ;; Example entry in .dir-locals.el
2 ((nil . ((+realgud:launch-plist . '(:program "${workspaceFolder}/build/bin/my_prog"
3                                     :args ("--in_file=${workspaceFolder}/some/file.csv"
4                                             "--out_file=/tmp/some_random_file"
5                                             "-a")))))

```

The special variables `${workspaceFolder}` and `${workspaceFolderBasename}` are defined as in VS Code, the actual values are filled from `projectile-project-root`.

```

1 (defun +realgud:get-launch-debugger-args (&key program args)
2   (let ((debugger--args ""))
3     (when program
4       (setq debugger--args program)
5       (when args
6         (setq debugger--args (concat debugger--args " " (s-join " " args)))))
7     ;; Replace special variables
8     (let* ((ws--root (expand-file-name (or (projectile-project-root) ".")))
9            (ws--basename (file-name-nondirectory
10                          (if (s-ends-with-p "/" ws--root)
11                              (substring ws--root 0 -1)
12                              ws--root))))
13       (s-replace-all
14        (list (cons "${workspaceFolder}" ws--root)
15              (cons "${workspaceFolderBasename}" ws--basename))
16        debugger--args)))
17
18 (defun +debugger/realgud:gdb-launch ()
19   "Launch RealGUD with parameters from +realgud:launch-plist"
20   (interactive)
21   (require 'realgud)
22   (if +realgud:launch-plist
23       (realgud:gdb
24        (concat realgud:gdb-command-name
25                " --args "
26                (apply '+realgud:get-launch-debugger-args +realgud:launch-plist)))
27       (progn
28        (message "Variable +realgud:launch-plist is nil")
29        (realgud:gdb)))
30
31 (map! :leader :prefix ("l" . "custom")
32      (:when (featurep! :tools debugger)
33            :prefix-map ("d" . "debugger")
34            :desc "RealGUD launch" "d" #' +debugger/realgud:gdb-launch))

```

**Record and replay rr** We then add some shortcuts to run `rr` from Emacs, the `rr record` takes the program name and arguments from my local `+realgud:launch-plist`, when `rr replay` respects the arguments configured in RealGUD's GDB command name. Some useful hints could be found [here](#), [here](#), [here](#) and [here](#).

```

1 (after! realgud
2   (require 's)
3
4   (defun +debugger/rr-replay ()
5     "Launch `rr replay'"
6     (interactive)
7     (realgud:gdb (s-replace "gdb" "rr replay" realgud:gdb-command-name)))
8

```

```

9 (defun +debugger/rr-record ()
10   "Launch `rr record' with parameters from `+realgud:launch-plist'"
11   (interactive)
12   (let ((debugger--args (apply '+realgud:get-launch-debugger-args +realgud:launch-plist)))
13     (unless (make-process :name "*rr record*"
14                          :buffer "*rr record*"
15                          :command (append '("rr" "record") (s-split " " debugger--args)))
16       (message "Cannot make process 'rr record'"))))
17
18   (map! :leader :prefix ("l" . "custom")
19         (:when (featurep! :tools debugger)
20               :prefix-map ("d" . "debugger")
21               :desc "rr record" "r" #' +debugger/rr-record
22               :desc "rr replay" "R" #' +debugger/rr-replay)))

```

### 8.9.3 GDB

**Emacs GDB** DAP mode is great, however, it is not mature for C/C++ debugging, it does not support some basic features like *Run until cursor*, *Show disassembled code...* etc. Emacs have builtin `gdb` support through `gdb-mi` and `gud`.

The `emacs-gdb` package overwrites the builtin `gdb-mi`, it is much faster (thanks to it's C module), and it defines some easy to use UI, with Visual Studio like keybindings.

```

1 (package! gdb-mi
2   :recipe (:host github
3           :repo "weirdNox/emacs-gdb"
4           :files ("*.el" "*.c" "*.h" "Makefile")))

```

```

1 (use-package! gdb-mi
2   :init
3   (fmakunbound 'gdb)
4   (fmakunbound 'gdb-enable-debug)
5
6   :config
7   (setq gdb-window-setup-function #'gdb--setup-windows ;; TODO: Customize this
8       gdb-ignore-gdbinit nil) ;; I use gdbinit to define some useful stuff
9   ;; History
10  (defvar +gdb-history-file "~/gdb_history")
11  (defun +gud-gdb-mode-hook-setup ()
12    "GDB setup."
13
14    ;; Suposes "~/.gdbinit" contains:
15    ;; set history save on
16    ;; set history filename ~/.gdb_history
17    ;; set history remove-duplicates 2048
18    (when (and (ring-empty-p comint-input-ring)
19              (file-exists-p +gdb-history-file))
20      (setq comint-input-ring-file-name +gdb-history-file)
21      (comint-read-input-ring t)))
22
23  (add-hook 'gud-gdb-mode-hook '+gud-gdb-mode-hook-setup))

```

**Custom layout for gdb-many-windows** Stolen from <https://stackoverflow.com/a/41326527/3058915>. I used it to change the builtin `gdb-many-windows` layout.

```

1 (setq gdb-many-windows nil)
2
3 (defun set-gdb-layout(&optional c-buffer)
4   (if (not c-buffer)
5       (setq c-buffer (window-buffer (selected-window)))) ;; save current buffer
6

```

```

7 ;; from http://stackoverflow.com/q/39762833/846686
8 (set-window-dedicated-p (selected-window) nil) ;; unset dedicate state if needed
9 (switch-to-buffer gud-comint-buffer)
10 (delete-other-windows) ;; clean all
11
12 (let* ((w-source (selected-window)) ;; left top
13        (w-gdb (split-window w-source nil 'right)) ;; right bottom
14        (w-locals (split-window w-gdb nil 'above)) ;; right middle bottom
15        (w-stack (split-window w-locals nil 'above)) ;; right middle top
16        (w-breakpoints (split-window w-stack nil 'above)) ;; right top
17        (w-io (split-window w-source (floor(* 0.9 (window-body-height))) 'below))) ;; left bottom
18 (set-window-buffer w-io (gdb-get-buffer-create 'gdb-inferior-io))

18       (delete-overlay gud-overlay)))
19
20 (add-hook 'kill-buffer-hook 'gud-kill-buffer)

```

## Highlight current line

### 8.9.4 Valgrind

```
1 (package! valgrind
2   :recipe (:local-repo "lisp/valgrind"))
```

```
1 (use-package! valgrind
2   :commands valgrind)
```

## 8.10 Git & VC

### 8.10.1 Magit

```
1 (after! magit
2   ;; Inspired by https://alhassy.github.io/emacs.d/#Encouraging-useful-commit-messages
3   ;; Making reference to: https://chris.beams.io/posts/git-commit/
4   (defun +git-commit-reminder ()
5     (insert "\n\n-----"
6       # "The commit subject line ought to finish the phrase:
7       # "If applied, this commit will your subject line here ."")
8     (beginning-of-buffer))
9
10  (add-hook 'git-commit-setup-hook '+git-commit-reminder))
```

```
1 (package! company-gitcommit
2   :recipe (:local-repo "lisp/company-gitcommit"))
```

### WIP Company for commit messages

```
1 ;; NOTE: WIP: not tangled
2 (use-package! company-gitcommit
3   :init
4   (add-hook
5     'git-commit-setup-hook
6     (lambda ()
7       (let ((backends (car company-backends)))
8         (setq company-backend
9           (if (listp backends)
10              (cons (append backends 'company-gitcommit) (car company-backends))
11              (append company-backends (list 'company-gitcommit)))))))
```

### 8.10.2 Repo

This adds Emacs integration of `repo`, The Multiple Git Repository Tool. Make sure the `repo` tool is installed, if not, `pacman -S repo` on Arch-based distributions, or directly with:

```
REPO_PATH="$HOME/.local/bin/repo"
curl "https://storage.googleapis.com/git-repo-downloads/repo" > ${REPO_PATH}
chmod a+x ${REPO_PATH}
```

```
1 (package! repo)
```

```
1 (use-package! repo
2   :when REPO-P
3   :commands repo-status)
```

### 8.10.3 Blamer

Display Git information (author, date, message...) for current line

```
1 (package! blamer
2   :recipe (:host github
3           :repo "artawower/blamer.el"))
```

```

1 (use-package! blamer
2   :custom
3   (blamer-idle-time 0.3)
4   (blamer-min-offset 60)
5   (blamer-prettify-time-p t)
6   (blamer-entire-formatter " %s")
7   (blamer-author-formatter " %s ")
8   (blamer-datetime-formatter "[%s], ")
9   (blamer-commit-formatter ""%s"")
10
11  :custom-face
12  (blamer-face ((t :foreground "#7a88cf"
13                  :background nil
14                  :height 125
15                  :italic t)))
16
17  :hook ((prog-mode . blamer-mode)
18         (text-mode . blamer-mode))
19
20  :config
21  (when (featurep! :ui zen) ;; Disable in zen (writeroom) mode
22    (add-hook! 'writeroom-mode-enable-hook (blamer-mode -1))
23    (add-hook! 'writeroom-mode-disable-hook (blamer-mode 1))))

```

## 8.11 Assembly

Add some packages for better assembly coding.

```
1 (package! nasm-mode)
2 (package! haxor-mode)
3 (package! mips-mode)
4 (package! riscv-mode)
5 (package! x86-lookup)
```

```
1 (use-package! nasm-mode
2   :mode "\\.[n]*\\(asm\\|s\\)\\'")
3
4 ;; Get Haxor VM from https://github.com/krzysztof-magosa/haxor
5 (use-package! haxor-mode
6   :mode "\\.[hax]\\'")
7
8 (use-package! mips-mode
9   :mode "\\.[mips]\\'")
10
11 (use-package! riscv-mode
12   :mode "\\.[riscv]\\'")
13
14 (use-package! x86-lookup
```

```

15 :commands (x86-lookup)
16 :config
17 (when (featurep! :tools pdf)
18   (setq x86-lookup-browse-pdf-function 'x86-lookup-browse-pdf-pdf-tools))
19 ;; Get manual from https://www.intel.com/content/www/us/en/developer/articles/technical/intel-sdm.html
20 (setq x86-lookup-pdf (expand-file-name "x86-lookup/325383-sdm-vol-2abcd.pdf" doom-etc-dir)))

```

## 8.12 Disaster

```

1 (package! disaster
2   :pin "9662437834e79cda3c468952ec03947aa39e92f6"
3   :recipe (:host github
4             :repo "abougouffa/disaster"))

```

```

1 (use-package! disaster
2   :commands (disaster)
3   :init
4   (setq disaster-assembly-mode 'nasm-mode)
5
6   (map! :localleader
7         :map (c++-mode-map c-mode-map)
8         :desc "Disaster" "d" #'disaster))

```

## 8.13 Devdocs

```

1 (package! devdocs
2   :recipe (:host github
3             :repo "astoff/devdocs.el"
4             :files ("*.el")))

```

```

1 (use-package! devdocs
2   :commands (devdocs-lookup devdocs-install)
3   :config
4   (setq devdocs-data-dir (expand-file-name "devdocs" doom-etc-dir)))

```

## 8.14 Systemd

For editing systemd unit files.

```

1 (package! systemd)

```

## 8.15 Franca IDL

Add support for *Franca Interface Definition Language*.

```

1 (package! franca-idl
2   :recipe (:host github
3             :repo "zeph1e/franca-idl.el"))

```

```

1 (use-package! franca-idl
2   :commands franca-idl-mode)

```

## 8.16 *L<sup>A</sup>T<sub>E</sub>X*

```

1 (package! aas
2   :recipe (:host github
3           :repo "ymarco/auto-activating-snippets"))

```

```

1 (use-package! aas
2   :commands aas-mode)

```

## 8.17 Flycheck + Projectile

WIP: Not working atm!

```

1 (package! flycheck-projectile
2   :recipe (:host github
3           :repo "nbfalcon/flycheck-projectile"))

```

```

1 (use-package! flycheck-projectile
2   :commands flycheck-projectile-list-errors)

```

## 8.18 Graphviz

Graphviz is a nice method of visualizing simple graphs, based on the DOT graph description language (\*.dot / \*.gv files).

```

1 (package! graphviz-dot-mode)

```

```

1 (use-package! graphviz-dot-mode
2   :commands graphviz-dot-mode
3   :mode ("\\.dot\\'" "\\.gv\\'")
4   :init
5   (after! org
6     (setcdr (assoc "dot" org-src-lang-modes) 'graphviz-dot)))
7
8 (use-package! company-graphviz-dot
9   :after graphviz-dot-mode)

```

## 8.19 Mermaid

```

1 (package! mermaid-mode)
2
3 (package! ob-mermaid
4   :recipe (:host github
5           :repo "arnm/ob-mermaid"))

```

```

1 (use-package! mermaid-mode
2   :commands mermaid-mode
3   :mode ("\\.mmd\\'"))
4
5 (use-package! ob-mermaid
6   :after org
7   :init
8   (after! org
9     (add-to-list 'org-babel-load-languages '(mermaid . t))))

```

## 8.20 Inspector

```

1 (package! inspector
2   :recipe (:host github
3           :repo "mmontone/emacs-inspector"))

```

```

1 (use-package! inspector
2   :commands (inspect-expression inspect-last-sexp))

```

## 9 Office

### 9.1 Org mode additional packages

To avoid problems in the `(after! org)` section.

```

1 (unpin! org-roam) ;; To avoid problems with org-roam-ui
2 (package! websocket)
3 (package! org-roam-ui)
4 (package! org-wild-notifier)
5 (package! org-fragtog)
6 (package! org-ref)
7 (package! org-appear)
8 (package! org-super-agenda)
9 (package! doct)
10
11 (package! org-mode
12   ;; https://github.com/doomemacs/doomemacs/issues/6478#issuecomment-1160699339
13   :pin "971eb6885ec996c923e955730df3bafdbc244e54")
14
15 (package! caldav
16   :recipe (:host github
17           :repo "dengste/org-caldav"))
18
19 (package! org-ol-tree
20   :recipe (:host github :repo "Townk/org-ol-tree")
21   :pin "207c748aa5fea8626be619e8c55bdb1c16118c25")
22
23 (package! org-modern
24   :recipe (:host github
25           :repo "minad/org-modern"))
26
27 (package! org-bib
28   :recipe (:host github
29           :repo "rougier/org-bib-mode"))
30
31 (package! academic-phrases
32   :recipe (:host github
33           :repo "nashamri/academic-phrases"))

```

## 9.2 Org mode

### 9.2.1 Intro

Because this section is fairly expensive to initialize, we'll wrap it in a `(after! ...)` block.

```
1 (after! org
2   <<org-conf>>
3 )
```

### 9.2.2 Behavior

#### Tweaking defaults

```
1 (setq org-directory "~/Dropbox/Org/"      ; let's put files here
2   org-use-property-inheritance t          ; it's convenient to have properties inherited
3   org-log-done 'time                      ; having the time an item is done sounds convenient
4   org-list-allow-alphabetical t           ; have a. A. a) A) list bullets
5   ;; org-export-in-background t           ; run export processes in external emacs process
6   ;; org-export-async-debug t
7   org-tags-column 0
8   org-catch-invisible-edits 'smart        ; try not to accidentally do weird stuff in invisible regions
9   org-export-with-sub-superscripts '{}    ; don't treat lone _ / ^ as sub/superscripts, require _{} / ^{}
10  org-auto-align-tags nil
11  org-special-ctrl-a/e t
12  org-startup-indented t ;; Enable 'org-indent-mode' by default, override with '+#startup: noindent' for big
↪ files
13  org-insert-heading-respect-content t)
```

#### Org basics

**Babel** I also like the `:comments` header-argument, so let's make that a default.

```
1 (setq org-babel-default-header-args
2   '((:session . "none")
3     (:results . "replace")
4     (:exports . "code")
5     (:cache . "no")
6     (:noweb . "no")
7     (:hlines . "no")
8     (:tangle . "no")
9     (:comments . "link")))
```

Babel is really annoying when it comes to working with Scheme (via Geiser), it keeps asking about which Scheme implementation to use, I tried to set this in file local variables (with the `)` and `dir-locals` but it didn't work. This should work now!

```
1 ;; stolen from https://github.com/yohan-pereira/.emacs#babel-config
2 (defun +org-confirm-babel-evaluate (lang body)
3   (not (string= lang "scheme"))) ;; Don't ask for scheme
4
5 (setq org-confirm-babel-evaluate #' +org-confirm-babel-evaluate)
```

**Visual line / auto fill** By default, `visual-line-mode` is turned on, and `auto-fill-mode` off by a hook. However, this messes with tables in Org-mode, and other plain text files (e.g. markdown, L<sup>A</sup>T<sub>E</sub>X) so I'll turn it off for this, and manually enable it for more specific modes as desired.

```

1 (remove-hook 'text-mode-hook #'visual-line-mode)
2 (add-hook 'text-mode-hook #'auto-fill-mode)

```

**EVIL** There also seem to be a few keybindings which use `hjkl`, but miss arrow key equivalents.

```

1 (map! :map evil-org-mode-map
2   :after evil-org
3   :n "g <up>" #'org-backward-heading-same-level
4   :n "g <down>" #'org-forward-heading-same-level
5   :n "g <left>" #'org-up-element
6   :n "g <right>" #'org-down-element)

```

```

1 (setq org-todo-keywords
2   '((sequence "IDEA(i)" "TODO(t)" "NEXT(n)" "PROJ(p)" "STRT(s)" "WAIT(w)" "HOLD(h)" "|" "DONE(d)" "KILL(k)")
3     (sequence "[ ](T)" "[-](S)" "|" "[X](D)")
4     (sequence "|" "OKAY(o)" "YES(y)" "NO(n)")))
5

46     ("medium" . (:foreground "orange" :weight bold))
47     ("hard" . (:foreground "red" :weight bold))
48     ("bonus" . (:foreground "goldenrod" :weight bold))
49     ("noexport" . (:foreground "LimeGreen" :weight bold))))
50

```

```

51 ;; (defun log-todo-next-creation-date (&rest ignore)
52 ;;   "Log NEXT creation time in the property drawer under the key 'ACTIVATED'"
53 ;;   (when (and (string= (org-get-todo-state) "NEXT")
54 ;;               (not (org-entry-get nil "ACTIVATED"))))
55 ;;     (org-entry-put nil "ACTIVATED" (format-time-string "[%Y-%m-%d]")))
56
57 ;; (add-hook 'org-after-todo-state-change-hook #'log-todo-next-creation-date)

```

## TODOs

**Agenda** Set files for org-agenda

```
1 (setq org-agenda-files
2   (list (expand-file-name "inbox.org" org-directory)
3         (expand-file-name "agenda.org" org-directory)
4         (expand-file-name "gcal-agenda.org" org-directory)
5         (expand-file-name "notes.org" org-directory)
6         (expand-file-name "projects.org" org-directory)
7         (expand-file-name "archive.org" org-directory)))
```

Apply some styling on the standard agenda:

```
1 ;; Agenda styling
2 (setq org-agenda-block-separator ?)
3 org-agenda-time-grid
4 '((daily today require-timed)
5   (800 1000 1200 1400 1600 1800 2000)
6   " " " " " ")
7 org-agenda-current-time-string
8 " now ")
```

**Super agenda**    Configure org-super-agenda

[illegible]

```

32      (:name "Emacs" :tag "Emacs" :order 13)
33      (:name "Projects" :tag "Project" :order 14)
34      (:name "Research" :tag "Research" :order 15)
35      (:name "To read" :tag "Read" :order 30)
36      (:name "Waiting" :todo "WAIT" :order 20)
37      (:name "University" :tag "Univ" :order 32)
38      (:name "Trivial" :priority<= "E" :tag ("Trivial" "Unimportant") :todo ("SOMEDAY")
↪      :order 90)
39      (:discard (:tag ("Chore" "Routine" "Daily")))))))))))

```

## Calendar

**Google calendar (org-gcal)** I store my org-gcal configuration privately, it contains something like this:

```

(setq org-gcal-client-id "<SOME_ID>.apps.googleusercontent.com"
      org-gcal-client-secret "<SOME_SECRET>"
      org-gcal-fetch-file-alist '(("<USERNAME>@gmail.com" . "~/Dropbox/Org/gcal-agenda.org")))

```

```

1 (after! org-gcal
2   (load! "lisp/private/org-gcal.el"))

```

**TODO CalDAV** Need to be configured, see the github repo.

```

1 (use-package! caldav
2   :commands (org-caldav-sync))

```

## Capture Set capture files

```

1 (setq +org-capture-emails-file (expand-file-name "inbox.org" org-directory)
2   +org-capture-todo-file (expand-file-name "inbox.org" org-directory)
3   +org-capture-projects-file (expand-file-name "projects.org" org-directory))

```

Lets set up some org-capture templates, and make them visually nice to access.

```

1 (use-package! doct
2   :commands (doct))

```

```

1 (after! org-capture

20   "Select a member of an alist with multiple keys. Prettified.
21
22   TABLE is the alist which should contain entries where the car is a string.
23   There should be two types of entries.
24
25   1. prefix descriptions like (\"a\" \"Description\")
26      This indicates that `a' is a prefix key for multi-letter selection, and
27      that there are entries following with keys like \"ab\", \"ax\"...
28
29   2. Select-able members must have more than two elements, with the first
30      being the string of keys that lead to selecting it, and the second a
31      short description string of the item.
32
33   The command will then make a temporary buffer listing all entries
34   that can be selected with a single key, and all the single key
35   prefixes. When you press the key for a single-letter entry, it is selected.
36   When you press a prefix key, the commands (and maybe further prefixes)
37   under this key will be shown and offered for selection.
38
39   TITLE will be placed over the selection in the temporary buffer,
40   PROMPT will be used when prompting for a key. SPECIALS is an
41   alist with (\"key\" \"description\") entries. When one of these
42   is selected, only the bare key is returned."

5       :unnarrowed t))))

```

## Org Roam Capture template

**Snippet Helpers** I often want to set `src-block` headers, and it's a pain to:

- type them out
- remember what the accepted values are
- oh, and specifying the same language again and again

We can solve this in three steps:

- having one-letter snippets, conditioned on `(point)` being within a src header
- creating a nice prompt showing accepted values and the current default
- pre-filling the `src-block` language with the last language used

For header args, the keys I'll use are:

- r for :results
- e for :exports
- v for :eval
- s for :session

- d for :dir

```

1 (defun +yas/org-src-header-p ()
2   "Determine whether `point' is within a src-block header or header-args."
3   (pcase (org-element-type (org-element-context))
4     ('src-block (< (point) ; before code part of the src-block
5                  (save-excursion (goto-char (org-element-property :begin (org-element-context)))
6                                (forward-line 1)
7                                (point))))
8     ('inline-src-block (< (point) ; before code part of the inline-src-block
9                          (save-excursion (goto-char (org-element-property :begin (org-element-context)))
10                                          (search-forward "]"")
11                                          (point))))
12     ('keyword (string-match-p "^header-args" (org-element-property :value (org-element-context))))))

```

Now let's write a function we can reference in YASnippets to produce a nice interactive way to specify header arguments.

```

1 (defun +yas/org-prompt-header-arg (arg question values)
2   "Prompt the user to set ARG header property to one of VALUES with QUESTION.
3   The default value is identified and indicated. If either default is selected,
4   or no selection is made: nil is returned."
5   (let* ((src-block-p (not (looking-back "^#\\+property: [ \\t]+header-args:.*" (line-beginning-position))))
6         (default
7          (or
8           (cdr (assoc arg
9                     (if src-block-p
7                     (nth 2 (org-babel-get-src-block-info t))
8                     (org-babel-merge-params
9                      org-babel-default-header-args
10                      (let ((lang-headers
11                           (intern (concat "org-babel-default-header-args:"
12                                           (+yas/org-src-lang))))
13                          (when (boundp lang-headers) (eval lang-headers t))))))
14                      ""))
15                      default-value)
16          (setq values (mapcar
17                      (lambda (value)
18                        (if (string-match-p (regexp-quote value) default)
19                          (setq default-value
20                              (concat value " "
21                                      (propertize "(default)" 'face 'font-lock-doc-face)))
22                          value))
23                      values))
24         (let ((selection (consult--read question values :default default-value)))
25           (unless (or (string-match-p "(default)$" selection)
26                       (string= "" selection))
27             selection))))

```

Finally, we fetch the language information for new source blocks.

Since we're getting this info, we might as well go a step further and also provide the ability to determine the most popular language in the buffer that doesn't have any `header-args` set for it (with `#+properties`).

```

1 (defun +yas/org-src-lang ()
2   "Try to find the current language of the src/header at `point'.
3   Return nil otherwise."

7           (case-fold-search nil))
8       (while (re-search-forward "[ \t]*#\\+[A-Z_]+" nil t)
9         (unless (s-matches-p "RESULTS" (match-string 0))
10          (replace-match (downcase (match-string 0)) t)
11          (setq count (1+ count))))
12     (message "Replaced %d occurrences" count)))

```

**Org notifier** Add support for `org-wild-notifier`.

```

1 (use-package! org-wild-notifier
2   :hook (org-load . org-wild-notifier-mode)
3   :config
4   (setq org-wild-notifier-alert-time '(60 30)))

```

### 9.2.3 Custom links

**Sub-figures** This defines a new link type `subfig` to enable exporting sub-figures to  $\text{\LaTeX}$ , taken from “Export subfigures to  $\text{\LaTeX}$  (and HTML)”.

```

1 (org-link-set-parameters
2   "subfig"
3   :follow (lambda (file) (find-file file))
4   :face '(:foreground "chocolate" :weight bold :underline t)
5   :display 'full
6   :export
7   (lambda (file desc backend)
8     (when (eq backend 'latex)
9       (if (string-match ">\\((.+\\))" desc)
10         (concat "\\begin{subfigure}[b]"
11                 "\\caption{" (replace-regexp-in-string "\\s+>(.+)" "" desc) "}"
12                 "\\includegraphics" "[" (match-string 1 desc) "]" "{" file "}" "\\end{subfigure}")
13         (format "\\begin{subfigure}\\includegraphics{%s}\\end{subfigure}" desc file))))))

```

Example of usage:

```

#+caption: Lorem ipsum dolor
#+attr_latex: :options \centering
#+begin_figure
[[subfig:img1.jpg][Caption of img1 >(width=.3\textwidth)]]

[[subfig:img2.jpg][Caption of img2 >(width=.3\textwidth)]]

[[subfig:img3.jpg][Caption of img3 >(width=.6\textwidth)]]
#+end_figure

```

**L<sup>A</sup>T<sub>E</sub>X** inline markup Needs to make a `?`, with this hack you can write `[[latex:textsc][Some text]]`.

```

1 (org-add-link-type
2   "latex" nil
3   (lambda (path desc format)
4     (cond
5       ((eq format 'html)
6        (format "<span class=\"%s\">%s</span>" path desc))
7       ((eq format 'latex)
8        (format "\\%s{%s}" path desc))))))

```

### 9.2.4 Visuals

Here I try to do two things: improve the styling of the various documents, via font changes etc., and also propagate colours from the current theme.

#### Font display

**Headings** Let's make the title and the headings a bit bigger:

```

1 (custom-set-faces!
2   '(org-document-title :height 1.2))
3
4 (custom-set-faces!
5   '(outline-1 :weight extra-bold :height 1.25)
6   '(outline-2 :weight bold :height 1.15)
7   '(outline-3 :weight bold :height 1.12)
8   '(outline-4 :weight semi-bold :height 1.09)

10 ;;   (?B . 'all-the-icons-orange)
11 ;;   (?C . 'all-the-icons-yellow)
12 ;;   (?D . 'all-the-icons-green)
13 ;;   (?E . 'all-the-icons-blue))

```

## Symbols

### L<sup>A</sup>T<sub>E</sub>X fragments

**Prettier highlighting** First off, we want those fragments to look good.

```

1 (setq org-highlight-latex-and-related '(native script entities))

```

However, by using `native` highlighting the `org-block` face is added, and that doesn't look too great — particularly when the fragments are previewed.

Ideally `org-src-font-lock-fontify-block` wouldn't add the `org-block` face, but we can avoid advising that entire function by just adding another face with `:inherit default` which will override the background color.

Inspecting `org-do-latex-and-related` shows that `"latex"` is the language argument passed, and so we can override the background as discussed above.

```
1 (require 'org-src)
2 (add-to-list 'org-src-block-faces '("latex" (:inherit default :extend t)))
```

**Prettier rendering** It's nice to customize the look of  $\text{\LaTeX}$  fragments.

```
1 ;; (setq org-format-latex-header "\\documentclass{article}
2 ;; \\usepackage[svgnames]{xcolor}
3 ;; \\usepackage[T1]{fontenc}
4 ;; \\usepackage{booktabs}
5
6 ;; \\pagestyle{empty} % do not remove
7
8 ;; \\setlength{\\textwidth}{\\paperwidth}
9 ;; \\addtolength{\\textwidth}{-3cm}
10 ;; \\setlength{\\oddsidemargin}{1.5cm}
11 ;; \\addtolength{\\oddsidemargin}{-2.54cm}
12 ;; \\setlength{\\evensidemargin}{\\oddsidemargin}
13 ;; \\setlength{\\textheight}{\\paperheight}
14 ;; \\addtolength{\\textheight}{-\\headheight}
15 ;; \\addtolength{\\textheight}{-\\headsep}
16 ;; \\addtolength{\\textheight}{-\\footskip}
17 ;; \\addtolength{\\textheight}{-3cm}
18 ;; \\setlength{\\topmargin}{1.5cm}
19 ;; \\addtolength{\\topmargin}{-2.54cm}
20 ;; \\usepackage{arev}
21 ;; ")
```

Since we can, instead of making the background color match the `default` face, let's make it transparent.

```
1 (setq org-format-latex-options
2   (plist-put org-format-latex-options :background "Transparent"))
3
4 ;; Can be dvipng, dvisvgm, imagemagick
5 (setq org-preview-latex-default-process 'dvisvgm)
6
7 ;; Define a function to set the format latex scale (to be reused in hooks)
8 (defun +org-format-latex-set-scale (scale)
9   (setq org-format-latex-options (plist-put org-format-latex-options :scale scale)))
10

13
14 ;; Increase scale in Zen mode
15 (when (featurep! :ui zen)
16   (add-hook! 'writeroom-mode-enable-hook (+org-format-latex-set-scale 2.0))
17   (add-hook! 'writeroom-mode-disable-hook (+org-format-latex-set-scale 1.4)))
```

**Better equation numbering** Numbered equations all have (1) as the number for fragments with vanilla org-mode. This code (from `scimax`) injects the correct numbers into the previews so they look good. **Not working right now!**

```
1 (defun +scimax-org-renumber-environment (orig-func &rest args)

```

## Citar

### 9.2.6 Exporting

**General settings** By default Org only exports the first three levels of headings as ... headings. This is rather unfortunate as my documents frequently stray far beyond three levels of depth. The two main formats I care about exporting to are L<sup>A</sup>T<sub>E</sub>X and HTML. When using an `article` class, L<sup>A</sup>T<sub>E</sub>X headlines go from `\section`, `\subsection`, `\subsubsection`, and `\paragraph` to `\subgraph` — *five* levels. HTML5 has six levels of headings (`<h1>` to `<h6>`), but first level Org headings get exported as `<h2>` elements — leaving *five* usable levels.

As such, it would seem to make sense to recognize the first *five* levels of Org headings when exporting.

```
1 (setq org-export-headline-levels 5) ;; I like nesting
```

I'm also going to make use of an item in `ox-extra` so that I can add an `:ignore:` tag to headings for the content to be kept, but the heading itself ignored (unlike `:noexport:` which ignored both heading and content). This is useful when I want to use headings to provide a structure for writing that doesn't appear in the final documents.

```
1 (require 'ox-extra)
2 (ox-extras-activate '(ignore-headlines))
```

Since I (roughly) track Org HEAD, it makes sense to include the git version in the creator string.

```
1 (setq org-export-creator-string
2       (format "Emacs %s (Org mode %s)" emacs-version (org-release)))
```

### L<sup>A</sup>T<sub>E</sub>X export

**Compiling** By default Org uses `pdflatex × 3 + bibtex`. This simply won't do in our modern world. `latexmk + biber` (which is used automatically with `latexmk`) is a simply superior combination.

```
1 ;; `org-latex-compilers' contains a list of possible values ("pdflatex" "xelatex" "lualatex")
2 ;; for the `%latex' argument.
3 (setq org-latex-pdf-process '("latexmk -shell-escape -pdf -quiet -f -%latex -interaction=nonstopmode
4   ↪ -output-directory=%o %f"))
```

```
1 ;; Add 'svg' package to display SVG pictures (uses inkscape, imagemagik and ghostscript)
2 ;; (add-to-list 'org-latex-packages-alist '("" "svg"))
3 ;; (add-to-list 'org-latex-packages-alist '("" "fontspec")) ;; for xelatex
4 ;; (add-to-list 'org-latex-packages-alist '("utf8" "inputenc"))
```

### Org L<sup>A</sup>T<sub>E</sub>X packages

```
1 ;; this is for code syntax highlighting in export. you need to use
2 ;; -shell-escape with latex, and install pygments.
3 ;; (add-to-list 'org-latex-packages-alist '("sugnames" "xcolor"))
4 ;; (add-to-list 'org-latex-packages-alist '("" "minted"))
5
6 ;; (setq org-latex-listings 'minted) ;; Per document, in local variables
7 (setq org-latex-minted-options '(("frame" "lines")
8   ("fontsize" "\\footnotesize")
9   ("tabsize" "2")
10  ("breaklines" "")
11  ("breakanywhere" "") ;; break anywhere, no just on spaces
```

```

12         ("style" "default")
13         ("bgcolor" "GhostWhite")
14         ("linenos" "")))
15
16 (dolist (pair '((ipython    "python")
17                 (jupyter    "python")

83
84 (setq org-latex-default-class "article")
85 ;; org-latex-tables-booktabs t
86 ;; org-latex-reference-command "\\cref{%s}")

```

### Class templates

**Hugo** Update files with last modified date, when `#+lastmod:` is available

```

1 (setq time-stamp-active t
2   time-stamp-start "#\\+lastmod:[ \\t]*"
3   time-stamp-end "$"
4   time-stamp-format "%04Y-%02m-%02d")
5
6 (add-hook 'before-save-hook 'time-stamp nil)

```

## 9.3 Text editing

### 9.3.1 Plain text

It's nice to see ANSI color codes displayed. However, until Emacs 28 it's not possible to do this without modifying the buffer, so let's condition this block on that.

```

1 (after! text-mode
2   (add-hook! 'text-mode-hook
3     (unless (derived-mode-p 'org-mode)
4       ;; Apply ANSI color codes
5       (with-silent-modifications
6         (ansi-color-apply-on-region (point-min) (point-max) t))))))

```

### 9.3.2 Academic phrases

When writing your academic paper, you might get stuck trying to find the right phrase that captures your intention. This package tries to alleviate that problem by presenting you with a list of phrases organized by the topic or by the paper section that you are writing. This package has around 600 phrases so far.

This is based on the book titled “English for Writing Research - Papers Useful Phrases”.

```
1 (use-package! academic-phrases
2   :commands (academic-phrases
3             academic-phrases-by-section))
```

### 9.3.3 Quarto

Integration of Quarto in Emacs.

```
1 (package! quarto-mode)
```

```
1 (use-package! quarto-mode
2   :when QUARTO-P)
```

## 10 System configuration

### 10.1 Mime types

#### 10.1.1 Org mode files

Org mode isn’t recognized as its own mime type by default, but that can easily be changed with the following file. For system-wide changes try `/usr/share/mime/packages/org.xml`.

```
1 <mime-info xmlns='http://www.freedesktop.org/standards/shared-mime-info'>
2   <mime-type type="text/org">
3     <comment>Emacs Org-mode File</comment>
4     <glob pattern="*.org"/>
5     <alias type="text/org"/>
6   </mime-type>
7 </mime-info>
```

What’s nice is that Papirus now has an icon for `text/org`. One simply needs to refresh their mime database:

```
1 update-mime-database ~/.local/share/mime
```

Then set Emacs as the default editor:

```
1 xdg-mime default emacs-client.desktop text/org
```

#### 10.1.2 Registering org-protocol://

The recommended method of registering a protocol is by registering a desktop application, which seems reasonable.

```
1 [Desktop Entry]
2 Name=Emacs Org-Protocol
3 Exec=emacsclient %u
4 Icon=/home/hacko/.doom.d/assets/org-mode.svg
```

```

5 Type=Application
6 Terminal=false
7 MimeType=x-scheme-handler/org-protocol

```

To associate `org-protocol://` links with the desktop file:

```

1 xdg-mime default org-protocol.desktop x-scheme-handler/org-protocol

```

### 10.1.3 Configuring Chrome/Brave

As specified in the official documentation, we would like to invoke the `org-protocol://` without confirmation. To do this, we need to add this system-wide configuration.

```

1 read -p "Do you want to set Chrome/Brave to show the 'Always open ...' checkbox, to be used with the
  ↳ 'org-protocol://' registration? [Y | N]: " INSTALL_CONFIRM
2
3 if [[ $INSTALL_CONFIRM == "Y" ]]
4 then
5     sudo mkdir -p /etc/opt/chrome/policies/managed/
6
7     sudo tee /etc/opt/chrome/policies/managed/external_protocol_dialog.json > /dev/null <<'EOF'
8     {
9     "ExternalProtocolDialogShowAlwaysOpenCheckbox": true
10    }
11 EOF
12
13 sudo chmod 644 /etc/opt/chrome/policies/managed/external_protocol_dialog.json
14 fi

```

Then add a bookmarklet in your browser with this code:

```

1 javascript:location.href =
2 'org-protocol://roam-ref?template=r&ref='
3 + encodeURIComponent(location.href)
4 + '&title='
5 + encodeURIComponent(document.title)
6 + '&body='
7 + encodeURIComponent(window.getSelection())

```

## 10.2 Git

### 10.2.1 Git diffs

Based on this gist and this article.

```

1 *.tex diff=tex
2 *.bib diff=bibtex
3 *.{c,h,c++,h++,cc,hh,cpp,hpp} diff=cpp
4 *.m diff=matlab
5 *.py diff=python
6 *.rb diff=ruby
7 *.php diff=php
8 *.pl diff=perl
9 *.{html,xhtml} diff=html
10 *.f diff=fortran
11 *.{el,lisp,scm} diff=lisp
12 *.r diff=rstats
13 *.texi* diff=texinfo
14 *.org diff=org
15 *.rs diff=rust
16

```

```

17 *.odt diff=odt
18 *.odp diff=libreoffice
19 *.ods diff=libreoffice
20 *.doc diff=doc
21 *.xls diff=xls
22 *.ppt diff=ppt
23 *.docx diff=docx
24 *.xlsx diff=xlsx
25 *.pptx diff=pptx
26 *.rtf diff=rtf
27
28 *.{png,jpg,jpeg,gif} diff=exif
29
30 *.pdf diff=pdf
31 *.djvu diff=djvu
32 *.epub diff=pandoc
33 *.chm diff=tika
34 *.mhtml? diff=tika
35
36 *.{class,jar} diff=tika
37 *.{rar,7z,zip,apk} diff=tika

```

Then adding some regular expressions for it to `~/.config/git/config`, with some tools to view diffs on binary files.

```

### 10.2.2 Apache Tika App wrapper

**Apache Tika** is a content detection and analysis framework. It detects and extracts metadata and text from over a thousand different file types. We will be using the Tika App in command-line mode to show some meaningful diff information for some binary files.

First, let's add a custom script to run **tika-app**:

```

1  #!/bin/sh
2  APACHE_TIKA_JAR="$HOME/.local/share/tika/tika-app.jar"
3
4  if [ -f ${APACHE_TIKA_JAR} ]
5  then
6      exec java -Dfile.encoding=UTF-8 -jar ${APACHE_TIKA_JAR} "$@" 2>/dev/null
7  else
8      echo "JAR file not found at ${APACHE_TIKA_JAR}"
9  fi

```

Add tika's installation instructions to the `setup.sh` file.

```

1  update_apache_tika () {
2      TIKA_JAR_PATH=$HOME/.local/share/tika
3
4      if [ ! -d ${TIKA_JAR_PATH} ]
5      then
6          mkdir -p ${TIKA_JAR_PATH}
7      fi
8
9      TIKA_BASE_URL=https://archive.apache.org/dist/tika/
10     TIKA_JAR_LINK="${TIKA_JAR_PATH}/tika-app.jar"
11
12     echo -n "Checking for new Apache Tika App version... "
13
14     # Get the latest version
15     TIKA_VERSION=$(
16         curl -s ${TIKA_BASE_URL} | # Get the page
17         pandoc -f html -t plain | # Convert HTML page to plain text.
18         awk '/([0-9]+\.[0-9]+\.[0-9])\// {print substr($1, 0, length($1)-1)}' | # Get the versions directories (pattern:
19         ↪ X.X.X/)
20         sort -rV | # Sort versions, the newest first
21         head -n 1 # Get the first (newest) version
22     )
23
24     if [ -z ${TIKA_VERSION} ]
25     then
26         echo "Failed, check your internet connection."
27         exit 1
28     fi
29
30     echo "Latest version is ${TIKA_VERSION}"
31
32     TIKA_JAR="${TIKA_JAR_PATH}/tika-app-${TIKA_VERSION}.jar"
33     TIKA_JAR_URL="${TIKA_BASE_URL}${TIKA_VERSION}/tika-app-${TIKA_VERSION}.jar"
34
35     if [ ! -f ${TIKA_JAR} ]
36     then
37         echo "New version available!"
38         read -p "Do you want to download Apache Tika App v${TIKA_VERSION}? [Y | N]: " INSTALL_CONFIRM
39         if [[ $INSTALL_CONFIRM == "Y" ]]
40         then
41             curl -o ${TIKA_JAR} ${TIKA_JAR_URL} && echo "Apache Tika App v${TIKA_VERSION} downloaded successfully"
42         fi
43     else
44         echo "Apache Tika App is up-to-date, version ${TIKA_VERSION} already downloaded to '${TIKA_JAR}'"
45     fi
46
47     # Check the existence of the symbolic link
48     if [ -L ${TIKA_JAR_LINK} ]
49     then
50         unlink ${TIKA_JAR_LINK}
51     fi
52
53     # Create a symbolic link to the installed version
54     ln -s ${TIKA_JAR} ${TIKA_JAR_LINK}
55 }
56
57 update_apache_tika;

```

When it detects that Tesseract is installed, Tika App will try to extract text from some file types. For some reason, it tries to use Tesseract with some compressed files like \*.bz2, \*.apk... etc. I would like to disable this feature by exporting an XML config file which will be used when launching the Tika App (using `--config=<tika-config.xml>`).

```

1 <?xml version="1.0" encoding="UTF-8"?>
2 <properties>
3   <parsers>
4     <parser class="org.apache.tika.parser.DefaultParser">
5       <parser-exclude class="org.apache.tika.parser.ocr.TesseractOCRParser"/>
6     </parser>
7   </parsers>
8 </properties>

```

## 10.3 Emacs' Systemd daemon

Let's define a Systemd service to launch Emacs server automatically.

```

1 [Unit]
2 Description=Emacs server daemon
3 Documentation=info:emacs man:emacs(1) https://gnu.org/software/emacs/
4
5 [Service]
6 Type=forking
7 ExecStart=sh -c 'emacs --daemon && emacsclient -c --eval "(delete-frame)'"
8 ExecStop=/usr/bin/emacsclient --no-wait --eval "(progn (setq kill-emacs-hook nil) (kill-emacs))"
9 Restart=on-failure
10
11 [Install]
12 WantedBy=default.target

```

Which is then enabled by:

```

1 systemctl --user enable emacs.service

```

For some reason if a frame isn't opened early in the initialization process, the daemon doesn't seem to like opening frames later — hence the `&& emacsclient` part of the `ExecStart` value.

## 10.4 Emacs Client

### 10.4.1 Desktop integration

It can now be nice to use this as a 'default app' for opening files. If we add an appropriate desktop entry, and enable it in the desktop environment.

```

1 [Desktop Entry]
2 Name=Emacs (Client)
3 GenericName=Text Editor
4 Comment=A flexible platform for end-user applications
5 MimeType=text/english;text/plain;text/org;text/x-makefile;text/x-c++hdr;text/x-c++src;text/x-chdr;text/x-csrc;t
6 ↪ ext/x-java;text/x-moc;text/x-pascal;text/x-tcl;text/x-tex,application/x-shellscrip;text/x-c;text/x-c++;
7 Exec=emacsclient -create-frame --frame-parameters="(fullscreen . maximized)"
8 ↪ --alternate-editor="/usr/bin/emacs" --no-wait %F
9 Icon=emacs
10 Type=Application
11 Terminal=false
12 Categories=TextEditor;Utility;
13 StartupWMClass=Emacs
14 Keywords=Text;Editor;
15 X-KDE-StartupNotify=false

```

### 10.4.2 Command-line wrapper

A wrapper around `emacsclient`:

- Accepting `stdin` by putting it in a temporary file and immediately opening it.
- Guessing that the `tty` is a good idea when `$DISPLAY` is unset (relevant with SSH sessions, among other things).
- With a whiff of 24-bit color support, sets `TERM` variable to a `terminfo` that (probably) announces 24-bit color support.
- Changes GUI `emacsclient` instances to be non-blocking by default (`--no-wait`), and instead take a flag to suppress this behavior (`-w`).

I would use `sh`, but using arrays for argument manipulation is just too convenient, so I'll raise the requirement to `bash`. Since arrays are the only 'extra' compared to `sh`, other shells like `ksh` etc. should work too.

```

1  #!/usr/bin/env bash
2  force_tty=false
3  force_wait=false
4  stdin_mode=""
5
6  args=()
7
8  usage () {
9      echo -e "Usage: e [-t] [-m MODE] [OPTIONS] FILE [-]"
10
11      Emacs client convenience wrapper.
12
13      Options:
14      -h, --help          Show this message
15      -t, -nw, --tty       Force terminal mode
16      -w, --wait           Don't supply --no-wait to graphical emacsclient
17      -                     Take stdin (when last argument)
18      -m MODE, --mode MODE Mode to open stdin with
19      -mm, --maximized     Start Emacs client in maximized window
20
21      Run emacsclient --help to see help for the emacsclient."
22  }
23
24  while :
25  do
26      case "$1" in
27          -t | -nw | --tty)
28              force_tty=true
29              shift ;;
30          -w | --wait)
31              force_wait=true
32              shift ;;
33          -m | --mode)
34              stdin_mode="($2-mode)"
35              shift 2 ;;
36          -mm | --maximized)
37              args+=("--frame-parameters=(fullscreen . maximized)")
38              shift ;;
39          -h | --help)
40              usage
41              exit 0 ;;
42          --*=*)
43              set -- "$@" "${1%*=*}" "${1#*=}"
44              shift ;;
45          *)
46              [ "$#" = 0 ] && break
47              args+=("$1")
48              shift ;;
49      esac
50  done
51
```

```

52 if [ ! "${#args[*]}" = 0 ] && [ "${args[-1]}" = "-" ]
53 then
54     unset 'args[-1]'
55     TMP="$(mktemp /tmp/emacsstdin-XXX)"
56     cat > "$TMP"
57     args+=((-eval "(let ((b (generate-new-buffer \"*stdin*\"))) (switch-to-buffer b) (insert-file-contents
        ↪ \"\$TMP\") (delete-file \"\$TMP\")\${stdin_mode}))")
58 fi
59
60 if [ -z "$DISPLAY" ] || $force_tty
61 then
62     # detect terminals with sneaky 24-bit support
63     if { [ "$COLORTERM" = truecolor ] || [ "$COLORTERM" = 24bit ]; } \
64         && [ "$(tput colors 2>/dev/null)" -lt 257 ]
65     then
66         if echo "$TERM" | grep -q "~\w\+-[0-9]"
67         then
68             termstub="${TERM%*-*}"
69         else
70             termstub="${TERM#*-}"
71         fi
72
73         if infocmp "$termstub-direct" >/dev/null 2>&1
74         then
75             TERM="$termstub-direct"
76         else
77             TERM="xterm-direct"
78         fi # should be fairly safe
79     fi
80
81     emacsclient --tty -create-frame --alternate-editor="/usr/bin/emacs" "${args[@]}"
82 else
83     if ! $force_wait
84     then
85         args+=((-no-wait))
86     fi
87
88     emacsclient -create-frame --alternate-editor="/usr/bin/emacs" "${args[@]}"
89 fi

```

**Useful aliases** Now, to set an alias to use `e` with `magit`, and then for maximum laziness we can set aliases for the terminal-forced variants.

```

1 # Aliases to run emacs+magit
2 alias magit='e --eval "(progn (magit-status) (delete-other-windows))"'
3 alias magitt='e -t --eval "(progn (magit-status) (delete-other-windows))"'
4
5 # Aliases to run emacs+mu4e
6 alias emu='e --eval "(progn (=mu4e) (delete-other-windows))"'
7 alias emut='e -t --eval "(progn (=mu4e) (delete-other-windows))"'

```

And this to launch Emacs in terminal mode `et`, I use this as a default `$EDITOR`

```

1 #!/usr/bin/env bash
2 e -t "$@"

```

And `ev` for use with `$VISUAL`:

```

1 #!/usr/bin/env bash
2 e -w "$@"

```

```

1 export EDITOR=$HOME/.local/bin/et
2 # export VISUAL=$HOME/.local/bin/ev

```

## 10.5 AppImage

Install/update the `appimageupdatetool.AppImage` tool:

```

1 update_appimageupdatetool () {
2     TOOL_NAME=appimageupdatetool
3     MACHINE_ARCH=$(uname -m)
4     APPIMAGE_UPDATE_TOOL_PATH="$HOME/.local/bin/${TOOL_NAME}"
5     APPIMAGE_UPDATE_TOOL_URL="https://github.com/AppImage/AppImageUpdate/releases/download/continuous/${TOOL_NAME}
6     ↪}-${MACHINE_ARCH}.AppImage"
7
8     if [ -f ${APPIMAGE_UPDATE_TOOL_PATH} ] && $APPIMAGE_UPDATE_TOOL_PATH -j ${APPIMAGE_UPDATE_TOOL_PATH}
9     ↪ 2&>/dev/null
10    then
11        echo "${TOOL_NAME} already up to date"
12    else
13        if [ -f ${APPIMAGE_UPDATE_TOOL_PATH} ]
14        then
15            echo "Update available, downloading latest ${MACHINE_ARCH} version to ${APPIMAGE_UPDATE_TOOL_PATH}"
16            mv ${APPIMAGE_UPDATE_TOOL_PATH} "${APPIMAGE_UPDATE_TOOL_PATH}.backup"
17        else
18            echo "${TOOL_NAME} not found, downloading latest ${MACHINE_ARCH} version to ${APPIMAGE_UPDATE_TOOL_PATH}"
19        fi
20        wget -O ${APPIMAGE_UPDATE_TOOL_PATH} ${APPIMAGE_UPDATE_TOOL_URL} && # 2&>/dev/null
21        echo "Downloaded ${TOOL_NAME}-${MACHINE_ARCH}.AppImage" &&
22        [ -f "${APPIMAGE_UPDATE_TOOL_PATH}.backup" ] &&
23        rm "${APPIMAGE_UPDATE_TOOL_PATH}.backup"
24        chmod a+x ${APPIMAGE_UPDATE_TOOL_PATH}
25    fi
26 }
27
28 update_appimageupdatetool;

```

## 10.6 Oh-my-Zsh

### 10.6.1 Path

Path to your oh-my-zsh installation.

```

1 export ZSH="$HOME/.oh-my-zsh"

```

### 10.6.2 Themes and customization:

Set name of the theme to load, if set to "random", it will load a random theme each time oh-my-zsh is loaded, in which case, to know which specific one was loaded, run: `echo $RANDOM_THEME` See [github.com/ohmyzsh/ohmyzsh/wiki/Themes](https://github.com/ohmyzsh/ohmyzsh/wiki/Themes).

```

1 # Typewritten customizations
2 TYPEWRITTEN_RELATIVE_PATH="adaptive"
3 TYPEWRITTEN_CURSOR="underscore"
4
5 ZSH_THEME="typewritten/typewritten"
6
7 # Set list of themes to pick from when loading at random
8 # Setting this variable when ZSH_THEME=random will cause zsh to load
9 # a theme from this variable instead of looking in $ZSH/themes/
10 # If set to an empty array, this variable will have no effect.
11 # ZSH_THEME_RANDOM_CANDIDATES=( "robbyrussell" "agnoster" )

```

### 10.6.3 Behavior

```

1  # Uncomment the following line to use case-sensitive completion.
2  # CASE_SENSITIVE="true"
3
4  # Uncomment the following line to use hyphen-insensitive completion.
5  # Case-sensitive completion must be off. _ and - will be interchangeable.
6  # HYPHEN_INSENSITIVE="true"
7
8  # Uncomment the following line to disable bi-weekly auto-update checks.
9  # DISABLE_AUTO_UPDATE="true"
10
11 # Uncomment the following line to automatically update without prompting.
12 DISABLE_UPDATE_PROMPT="true"
13
14 # Uncomment the following line to change how often to auto-update (in days).
15 export UPDATE_ZSH_DAYS=3
16
17 # Uncomment the following line if pasting URLs and other text is messed up.
18 # DISABLE_MAGIC_FUNCTIONS="true"
19
20 # Uncomment the following line to disable colors in ls.
21 # DISABLE_LS_COLORS="true"
22
23 # Uncomment the following line to disable auto-setting terminal title.
24 # DISABLE_AUTO_TITLE="true"
25
26 # Uncomment the following line to enable command auto-correction.
27 # ENABLE_CORRECTION="true"
28
29 # Uncomment the following line to display red dots whilst waiting for completion.
30 # COMPLETION_WAITING_DOTS="true"
31
32 # Uncomment the following line if you want to disable marking untracked files
33 # under VCS as dirty. This makes repository status check for large repositories
34 # much, much faster.
35 # DISABLE_UNTRACKED_FILES_DIRTY="true"
36
37 # Uncomment the following line if you want to change the command execution time
38 # stamp shown in the history command output.
39 # You can set one of the optional three formats:
40 # "mm/dd/yyyy"|"dd.mm.yyyy"|"yyyy-mm-dd"
41 # or set a custom format using the strftime function format specifications,
42 # see 'man strftime' for details.
43 # HIST_STAMPS="mm/dd/yyyy"

```

### 10.6.4 Plugins

```

1  # Would you like to use another custom folder than $ZSH/custom?
2  ZSH_CUSTOM=$HOME/.config/my_ohmyzsh_customizations
3
4  # Which plugins would you like to load?
5  # Standard plugins can be found in $ZSH/plugins/
6  # Custom plugins may be added to $ZSH_CUSTOM/plugins/
7  # Example format: plugins=(rails git textmate ruby lighthouse)
8  # Add wisely, as too many plugins slow down shell startup.
9  plugins=(
10     zsh-autosuggestions
11     zsh-navigation-tools
12     zsh-interactive-cd
13     archlinux
14     ssh-agent
15     sudo
16     docker
17     systemd
18     tmux

```

```

19 python
20 pip
21 rust
22 repo
23 git
24 cp
25 rsync
26 ripgrep
27 fzf
28 fd
29 z
30 )

```

### 10.6.5 Bootstrap Oh-my-Zsh

```

1 source $ZSH/oh-my-zsh.sh

```

### 10.6.6 Aliases

```

1 # Aliases
2 alias zshconfig="vim ~/.zshrc"
3 alias ohmyzsh="ranger $ZSH"

```

## 10.7 Zsh user configuration

### 10.7.1 pbcopy and pbpaste

I like to define MacOS-like commands (`pbcopy` and `pbpaste`) to copy and paste in terminal (from `stdin`, to `stdout`). The `pbcopy` and `pbpaste` are defined using either `xclip` or `xsel`, you would need to install these tools, otherwise we wouldn't define the aliases.

```

1 # Define aliases to 'pbcopy' and 'pbpaste'
2 if command -v xclip &> /dev/null
3 then
4     # Define aliases using xclip
5     alias pbcopy='xclip -selection clipboard'
6     alias pbpaste='xclip -selection clipboard -o'
7 elif command -v xsel &> /dev/null
8 then
9     # Define aliases using xsel
10    alias pbcopy='xsel --clipboard --input'
11    alias pbpaste='xsel --clipboard --output'
12 fi

```

### 10.7.2 netpaste

Define a `netpaste` command to paste to a Pastebin server.

```

1 alias netpaste='curl -F file=@- 0x0.st' # OR 'curl -F f:1=<- ix.io '

```

### 10.7.3 Sudo GUI!

And then define `gsuon` and `gsuoff` aliases to run graphical apps from terminal with root permissions, this requires `xhost`.

```
1 # To run GUI apps from terminal with root permissions
2 if command -v xhost &> /dev/null
3 then
4     alias gsuon='xhost si:localuser:root'
5     alias gsuoff='xhost -si:localuser:root'
6 fi
```

### 10.7.4 Neovim

Use Neovim instead of VIM to provide `vi` and `vim` commands.

```
1 # NeoVim
2 if command -v nvim &> /dev/null
3 then
4     alias vim="nvim"
5     alias vi="nvim"
6 fi
```

### 10.7.5 ESP-IDF

Add some aliases to work with the ESP-IDF framework.

```
1 if [ -d $HOME/Softwares/src/esp-idf/ ]
2 then
3     alias esp-prepare-env='source $HOME/Softwares/src/esp-idf/export.sh'
4     alias esp-update='echo "Updating ESP-IDF framework..." && cd $HOME/src/esp-idf && git pull --all && echo
5     ↪ "Updated successfully"'
6 else
7     alias esp-prepare-env='echo "esp-idf repo not found. You can clone the esp-idf repo using git clone
8     ↪ https://github.com/espressif/esp-idf.git"'
9     alias esp-update=esp-prepare-env
10 fi
```

### 10.7.6 CLI wttr.in client

Define an alias to get weather information for my city:

```
1 export WTTRIN_CITY=Orsay
2
3 alias wttrin='curl wttr.in/$WTTRIN_CITY'
4 alias wttrin2='curl v2.wttr.in/$WTTRIN_CITY'
```

### 10.7.7 Minicom

Enable Meta key and colors in minicom:

```
1 export MINICOM='-m -c on'
```

### 10.7.8 Rust

Define Rust sources path, and add packages installed from `cargo` to the `PATH`.

```
1 export RUST_SRC_PATH=$HOME/.rustup/toolchains/stable-x86_64-unknown-linux-gnu/lib/rustlib/src/rust/src/
2 export PATH=$PATH:$HOME/.cargo/bin
```

I'm using the AUR package `clang-format-static-bin`, which provide multiple versions of Clang-format, I use it with some work projects requiring a specific version of Clang-format.

### 10.7.9 Clang-format

```
1 export PATH=$PATH:/opt/clang-format-static
```

### 10.7.10 CMake

Add my manually installed libraries to CMake and `PATH`.

```
1 export CMAKE_PREFIX_PATH=$HOME/Softwares/src/install
2 export PATH=$PATH:$HOME/Softwares/src/install/bin
```

### 10.7.11 Node

Set NPM installation path to local:

```
1 NPM_PACKAGES="${HOME}/.npm-packages"
2
3 # Export NPM bin path
4 export PATH="$PATH:$NPM_PACKAGES/bin"
5
6 # Preserve MANPATH if you already defined it somewhere in your config.
7 # Otherwise, fall back to `manpath` so we can inherit from `/etc/manpath`.
8 export MANPATH="${MANPATH-$(manpath)}:$NPM_PACKAGES/share/man"
9
10 # Tell Node about these packages
11 export NODE_PATH="$NPM_PACKAGES/lib/node_modules:$NODE_PATH"
```

Tell NPM to use this directory for its global package installs by adding this in `~/.npmrc`:

```
1 prefix = ~/.npm-packages
```

Some useful stuff (`fzf`, `opam`, Doom Emacs...)

### 10.7.12 tmux

I like to use `tmux` by default, even on my local sessions, I like to start a `tmux` in a `default` session on the first time I launch a terminal, and then, attach any other terminal to this default session:

```
1 # If not running inside Emacs (via vterm/eshell...)
2 if [ -z $INSIDE_EMACS ]
3 then
4     if command -v tmux &> /dev/null && [ -z "$TMUX" ]
5     then
6         tmux attach -t default || tmux new -s default
7     fi
8 fi
```

### 10.7.13 Other stuff

```

1  # You may need to manually set your language environment
2  # export LANG=en_US.UTF-8
3
4  # Preferred editor for local and remote sessions
5  # if [[ -n $SSH_CONNECTION ]]; then
6  #   export EDITOR='vim'
7  # else
8  #   export EDITOR='mvim'
9  # fi
10
11 # Compilation flags
12 # export ARCHFLAGS="-arch x86_64"
13
14 # FZF
15 [ -f ~/.fzf.zsh ] && source ~/.fzf.zsh
16
17 # OPAM configuration
18 [[ ! -r $HOME/.opam/opam-init/init.zsh ]] || source $HOME/.opam/opam-init/init.zsh > /dev/null 2> /dev/null
19
20 # Add ~/.config/emacs/bin to path (for DOOM Emacs stuff)
21 export PATH=$PATH:$HOME/.config/emacs/bin

```

Define some environment variables.

```

1  export DS_DIR=~/.PhD/datasets-no/experiment_images/
2  export DSO_BIN_DIR=~/.PhD/workspace-no/vo/orig/dso/build/release/bin
3  export DSO_RES_DIR=~/.PhD/workspace-no/vo/orig/dso_results

```

Load my bitwarden-cli session, exported to BW\_SESSION.

```

1  source ~/.bitwarden-session

```

## 10.8 System dark theme trick

Zotero does not support dark mode (ATM), when using a system-wide dark theme (at least on KDE), Zotero UI gets messed up, to fix this, we can force Zotero to use its default GTK theme by defining the `GTK_THEME=Default`.

```

1  [Desktop Entry]
2  Type=Application
3  Name=Zotero
4  GenericName=A free, easy-to-use tool to help you collect, organize, cite, and share your research sources.
5  Icon=zotero
6  Exec=GTK_THEME=Default /usr/bin/zotero --url %u
7  Categories=Office
8  Terminal=false
9  MimeType=x-scheme-handler/zotero

```

Same thing for Scilab

```

1  [Desktop Entry]
2  Comment=Scientific software package for numerical computations
3  Exec=GTK_THEME=Default scilab -f %f
4  GenericName=Scientific Software Package
5  Icon=scilab
6  Name=Scilab
7  StartupNotify=false
8  Terminal=false
9  Type=Application
10 Categories=Science;Math;

```

```

11 Keywords=Science;Math;Numerical;Simulation
12 MimeType=application/x-scilab-sci;application/x-scilab-sce;application/x-scilab-tst;application/x-scilab-dem;ap
↪ plication/x-scilab-sod;application/x-scilab-xcos;application/x-scilab-zcos;application/x-scilab-bin;applica
↪ tion/x-scilab-cosf;application/x-scilab-cos;

```

```

1 [Desktop Entry]
2 Comment=Hybrid simulator
3 Exec=GTK_THEME=Default xcos
4 GenericName=Scientific Software Package
5 Icon=xcos
6 Name=Xcos
7 StartupNotify=false
8 Terminal=false
9 Type=Application
10 Categories=Science;Physics;
11 Keywords=Science;Physics;Simulation
12 MimeType=application/x-scilab-xcos;application/x-scilab-zcos;application/x-scilab-cosf;application/x-scilab-cos;

```

## 10.9 Rust format

For Rust code base, the file `$HOME/.rustfmt.toml` contains the global format settings, I like to set it to:

```

1 # Rust edition 2018
2 edition = "2018"
3
4 # Use Unix style newlines, with 2 spaces tabulation.
5 newline_style = "Unix"
6 tab_spaces = 2
7 hard_tabs = false
8
9 # Make one line functions in a single line
10 fn_single_line = true
11
12 # Format strings
13 format_strings = true
14
15 # Increase the max line width
16 max_width = 120
17
18 # Merge nested imports
19 merge_imports = true
20
21 # Enum and Struct alignment
22 enum_discrim_align_threshold = 20
23 struct_field_align_threshold = 20
24
25 # Reorder impl items: type > const > macros > methods.
26 reorder_impl_items = true
27
28 # Comments and documentation formating
29 wrap_comments = true
30 normalize_comments = true
31 normalize_doc_attributes = true
32 format_code_in_doc_comments = true
33 report_fixme = "Always"
34 todo = "Always"

```

## 10.10 eCryptfs

### 10.10.1 Unlock and mount script

```

1  #!/bin/sh -e
2  # This script mounts a user's confidential private folder
3  #
4  # Original by Michael Halcrow, IBM
5  # Extracted to a stand-alone script by Dustin Kirkland <kirkland@ubuntu.com>
6  # Modified by: Abdelhak Bougouffa <abougouffa@fedoraproject.org>
7  #
8  # This script:
9  # * interactively prompts for a user's wrapping passphrase (defaults to their
10 #   login passphrase)
11 # * checks it for validity
12 # * unwraps a users mount passphrase with their supplied wrapping passphrase
13 # * inserts the mount passphrase into the keyring
14 # * and mounts a user's encrypted private folder
15
16 PRIVATE_DIR="Private"
17 PW_ATTEMPTS=3
18 MESSAGE=`gettext "Enter your login passphrase:"`
19
20 if [ -f $HOME/.ecryptfs/wrapping-independent ]
21 then
22     # use a wrapping passphrase different from the login passphrase
23     MESSAGE=`gettext "Enter your wrapping passphrase:"`
24 fi
25
26 WRAPPED_PASSPHRASE_FILE="$HOME/.ecryptfs/wrapped-passphrase"
27 MOUNT_PASSPHRASE_SIG_FILE="$HOME/.ecryptfs/$PRIVATE_DIR.sig"
28
29 # First, silently try to perform the mount, which would succeed if the appropriate
30 # key is available in the keyring
31 if /sbin/mount.ecryptfs_private >/dev/null 2>&1
32 then
33     exit 0
34 fi
35
36 # Otherwise, interactively prompt for the user's password
37 if [ -f "$WRAPPED_PASSPHRASE_FILE" -a -f "$MOUNT_PASSPHRASE_SIG_FILE" ]

81 fi
82
83 dolphin "$HOME/Private"
84 exit 0

```

### 10.10.2 Desktop integration

```

1 [Desktop Entry]
2 Type=Application
3 Version=1.0
4 Name=eCryptfs Unlock Private Directory
5 Icon=unlock
6 Exec=/home/hacko/.ecryptfs/ecryptfs-mount-private-gui
7 Terminal=False

```

## 10.11 GDB

### 10.11.1 Early init

I like to disable the initial message (containing copyright info and other stuff), the right way to do this is either by starting `gdb` with `-q` option, or (since GDB v11 I think), by setting in `~/.gdbearlyinit`.

```

1 # GDB early init file
2 # Abdelhak Bougouffa (c) 2022
3
4 # Disable showing the initial message
5 set startup-quietly

```

### 10.11.2 Init

GDB loads `$HOME/.gdbinit` at startup, I like to define some default options in this file, this is a WIP, but won't evolve too much, as it is recommended to keep the `.gdbinit` simple. For the moment, it does just enable pretty printing, and defines `c` and `n` commands to wrap `continue` and `next` with a post `refresh`, this is just to avoid the annoying TUI when the program outputs to the stdout.

```

1 # GDB init file
2 # Abdelhak Bougouffa (c) 2022
3
4 # Save history
5 set history save on
6 set history filename ~/.gdb_history
7 set history remove-duplicates 2048
8

```

```

9  # Set pretty print
10 set print pretty on
11
12 # This fixes the annoying ncurses TUI glitches and saves typing C-l each time to refresh the screen
13 define cc
14   continue
15   refresh
16 end
17
18 define nn
19   next
20   refresh
21 end
22
23 guile
24 <<guile-check-for-script>>
25 end

```

**WIP: Guile Scheme per program/project script** I often debug programs with a lot of arguments, I like to be able to set the arguments and the binary file to be launched in a per project script (currently using Guile Scheme). This bit of code checks if the `gdb.scm` file exists in the working directory, and if so, loads it.

A more flexible way is to provide a per program config files (to debug a program named `fft`, I like to create a script named `fft.scm` which gets loaded after the file). The following is a WIP, for the moment, I need to call my custom command `dbg-guile` when GDB done loading symbols from the file, otherwise, the used `(current-progspace)` returns an object with no filename. I need a mechanism to hook the `(dbg-find-and-load)` to GDB's load file functionality.

```

1  (use-modules (gdb))
2
3  (define (dbg-check-and-load filename)
4    (if (file-exists? filename)
5        (begin (display (string-append "Found a Guile Scheme script, loading file " filename "\n"))
6                (load filename)
7                #t)
8        #f))
9
10 (define (dbg-find-and-load)
11   ;; Get the program name from the current progspace
12   ;; For a program named "prog", the priorities goes like this:
13   ;; 1. a script with the same program name (prog.scm) exists in the current directory
14   ;; 2. a script with the same program name (prog.scm) exists in the program directory
15   ;; 3. a script with the name (gdb.scm) exists in the current directory
16   (let ((dbg-prg-filename (progspace-filename (current-progspace))))
17     (if dbg-prg-filename
18         (or (dbg-check-and-load (string-append (basename dbg-prg-filename) ".scm"))
19             (dbg-check-and-load (string-append dbg-prg-filename ".scm")))
20         (dbg-check-and-load "gdb.scm"))))
21
22 ;; Run by default
23 (dbg-find-and-load)
24
25 ;; Define a command to load binary specific config
26 (register-command! (make-command "dbg-guile" #:invoke (lambda (self arg from-tty) (dbg-find-and-load))))

```

In my project, I create a `gdb.scm` (or `<program-name>.scm`) with something like this:

```

1  ;; Load program executable
2  (execute "file ./build/bin/my_program")
3
4  ;; Load program arguments
5  (execute (string-join '("set args "
6                          "arg1"
7                          "--param=arg2")))

```

## 10.12 GnuPG

I add this to my `~/.gnupg/gpg-agent.conf`, to set the time-to-live to one day.

```
1 # Do not ask me about entered passwords for 24h (during the same session)
2 default-cache-ttl 86400
3 max-cache-ttl 86400
```

## 10.13 Packages

I like to use the BMC class, however, I do not like to manually install stuff in system directories, so I made an Arch Linux AUR package `bmc-git` for it.

I do use the `metropolis` theme for Beamer presentations, so I'm maintaining a package of it in the AUR too.

```
1 check_and_install_pkg () {
2     PKG_NAME="$1"
3     if ! pacman -Qiq ${PKG_NAME} &> /dev/null
4     then
5         echo "Package ${PKG_NAME} is missing, installing it using yay"
6         yay -S ${PKG_NAME}
7     fi
8 }
9
10 check_and_install_pkg bmc-git
11 check_and_install_pkg beamer-theme-metropolis
```

## 10.14 KDE Plasma

On KDE, there is a good support for HiDPI displays, however, an annoying thing is the small icons in some contexts (for example, a right click on desktop). This can be fixed by setting `PLASMA_USE_QT_SCALING=1`. KDE sources the files with `.sh` extension found on `~/.config/plasma-workspace/env`, so lets create our's.

```
1 # export PLASMA_USE_QT_SCALING=1
```
