

Doom Emacs Configuration

Emacs configuration for work and life!

Abdelhak Bougouffa*

1 This repository

This repository (abougouffa/dotfiles) contains my configuration files for **Zsh**, **Emacs**, **Vim**, **Alacritty** and other Linux related stuff.

If you want to reuse some of these configurations, you will need to modify some directories and add some user specific information (usernames, passwords...)

This is the main configuration file `.doom.d/config.org`, (available also as a PDF file), it contains the literal configuration for Doom Emacs, and I use it to generate some other user configuration files (define aliases, environment variables, user tools, Git configuration...).

1.1 How to install

Since commit 55c92810, I'm using **chezmoi** to manage my Dotfiles.

Now the Dotfiles can be installed using the following command; however, I don't recommend installing all of my dotfiles, try instead to adapt them or to copy some interesting chunks.

```
1 sudo pacman -S chezmoi
2 chezmoi init --apply abougouffa
```

1.2 Emacs stuff

To use my Doom Emacs configuration, you need first to install Doom Emacs to `~/.config/emacs` or `.emacs.d`:

```
1 git clone https://github.com/doomemacs/doomemacs.git ~/.config/emacs
2
3 ~/.config/emacs/bin/doom install
```

Until 12b3d20e, I was using Chemacs2 to manage multiple Emacs profiles. Since I'm using only Doom Emacs and Doom recently introduced a new feature to bootstrap other Emacs configs, so I switched to a plain Doom Emacs config.

2 Intro

I've been using Linux exclusively since 2010, **GNU Emacs** was always installed on my machine, but I didn't discover the **real** Emacs until 2020, in the beginning, I started my Vanilla Emacs configuration from scratch, but after a while, it becomes a mess. As a new Emacs user, I didn't understand the in the beginning how to optimize my configuration and how to do things correctly. I discovered then Spacemacs, which made things much easier, but it was a little slow, and just after, I found the awesome Doom Emacs, and since, I didn't quit my Emacs screen!

In the beginning, I was basically copying chunks of Emacs Lisp code from the internet, which quickly becomes a mess, specially because I was using a mixture of vanilla Emacs style configurations and Doom style ones.

Now I decided to rewrite a cleaner version of my configuration which will be more Doom friendly, and for that, I found an excellent example in *tecosaur's* emacs-config, so my current configuration is heavily inspired by *tecosaur's* one.

2.1 This file

This is my literate configuration file, I use it to generate Doom's config files (`$DOOMDIR/init.el`, `$DOOMDIR/packages.el` and `$DOOMDIR/config.el`), as well as some other shell scripts, app installers, app launchers... etc.

Make `config.el` run (slightly) faster with lexical binding (see this blog post for more info).

```
1 ;; config.el -*- coding: utf-8-unix; lexical-binding: t; -*-
```

Add the shebang and the description to the `setup.sh` file, which will be used to set system settings and install some missing dependencies.

```
1 #!/bin/bash
2
3 # This is an automatically generated setup file, it installes some missing
4 # dependencies, configure system services, set system settings form better
5 # desktop integration... etc.
6 # Abdelhak BOUGOUFFA (c) 2022
```

Add an initial comment to the `~/.zshrc` file.

```
1 # -*- mode: sh; -*-
2
3 # This file is automatically generated from my Org literate configuration.
4 # Abdelhak BOUGOUFFA (c) 2022
```

3 Doom configuration files

3.1 Pseudo early-init

This file will be loaded before the content of Doom's private `init.el`, I add some special stuff which I want to load very early.

```
1 ;; pseudo-early-init.el -*- coding: utf-8-unix; lexical-binding: t; -*-
2
```

3.1.1 Fixes

```
1 ;; Fixes to apply early
```

3.1.2 Useful functions

Here we define some useful functions, some of them are available via other packages like `cl-lib`, `dash.el` or `s.el`, but I don't like to load too much third party libraries, particularly in early stage, so let's define here.

```
1 ;; (+bool "someval")
2 ;; --> t
3 (defun +bool (val) (not (null val)))
4
5 ;; (+foldr (lambda (a b) (message "%d + %d" a b) (+ a b)) 0 '(1 2 3 4 5))
6 ;; --> 15
7 ;; (5 + 0) -> (4 + 5) -> (3 + 9) -> (2 + 12) --> (1 + 14)
8 (defun +foldr (fun acc seq)
9   (if (null seq) acc
10      (funcall fun (car seq) (+foldr fun acc (cdr seq)))))
11
12 ;; (+foldl (lambda (a b) (message "%d + %d" a b) (+ a b)) 0 '(1 2 3 4 5))
13 ;; --> 15
14 ;; (0 + 1) -> (1 + 2) -> (3 + 3) -> (6 + 4) -> (10 + 5)
15 (defun +foldl (fun acc seq)
16   (if (null seq) acc
17      (+foldl fun (funcall fun acc (car seq)) (cdr seq))))
18
19 ;; (+all '(83 88 t "txt"))
20 ;; --> t
21 (defun +all (seq)
22   (+foldr (lambda (r l) (and r l)) t seq))
23
24 ;; (+some '(nil nil "text" nil 2))
25 ;; --> t
26 (defun +some (seq)
27   (+bool (+foldr (lambda (r l) (or r l)) nil seq)))
28
29 ;; (+filter 'stringp '("A" 2 "C" nil 3))
30 ;; --> ("A" "C")
31 (defun +filter (fun seq)
32   (if (null seq) nil
33       (let ((head (car seq))
34             (tail (cdr seq)))
35         (if (funcall fun head)
36             (cons head (+filter fun tail))
37             (+filter fun tail)))))
38
39 ;; (+str-join ", " '("foo" "10" "bar"))
40 ;; --> "foo, 10, bar"
41 (defun +str-join (sep seq)
42   (+foldl (lambda (l r) (concat l sep r))
43          (car seq) (cdr seq)))
44
```

```

45 ;; (+str-split "foo, 10, bar" ", ")
46 ;; --> ("foo" "10" "bar")
47 (defun +str-split (str sep)
48   (let ((s (string-search sep str)))
49     (if s (cons (substring str 0 s)
50                 (+str-split (substring str (+ s (length sep))) sep))
51         (list str))))
52
53 ;; (+zip '(1 2 3 4) '(a b c d) '("A" "B" "C" "D"))
54 ;; --> ((1 a "A") (2 b "B") (3 c "C") (4 d "D"))
55 (defun +zip (&rest seqs)
56   (if (null (car seqs)) nil
57       (cons (mapcar #'car seqs)
58             (apply #' +zip (mapcar #'cdr seqs)))))

```

3.1.3 Check for external tools

Some added packages require external tools, I like to check for these tools and store the result in global constants.

```

1  ;; Some packages do not work correctly on Emacs built with the LUCID feature
2  (defconst IS-LUCID (+bool (string-search "LUCID" system-configuration-features)))
3  (defconst EAF-DIR (expand-file-name "eaf/eaf-repo" doom-etc-dir))
4
5  (defconst AG-P (+bool (executable-find "ag")))
6  (defconst EAF-P (+bool (and (not IS-LUCID) (file-directory-p EAF-DIR))))
7  (defconst MPD-P (+all (mapcar #'executable-find '("mpc" "mpd"))))
8  (defconst MPV-P (+bool (executable-find "mpv")))
9  (defconst REPO-P (+bool (executable-find "repo")))
10 (defconst FRICAS-P (+bool (and (executable-find "fricas") (file-directory-p "/usr/lib/fricas/emacs"))))
11 (defconst MAXIMA-P (+bool (executable-find "maxima")))
12 (defconst QUARTO-P (+bool (executable-find "quarto")))
13 (defconst ROSBAG-P (+bool (executable-find "rosbag")))
14 (defconst ZOTERO-P (+bool (executable-find "zotero")))
15 (defconst CHEZMOI-P (+bool (executable-find "chezmoi")))
16 (defconst ECRYPTFS-P (+all (mapcar #'executable-find '("ecryptfs-add-passphrase"
17   ↪ "/sbin/mount.ecryptfs_private"))))
18 (defconst BITWARDEN-P (+bool (executable-find "bw")))
19 (defconst YOUTUBE-DL-P (+bool (+some (mapcar #'executable-find '("yt-dlp" "youtube-dl")))))
20 (defconst NETEXTENDER-P (+bool (and (executable-find "netExtender") (file-exists-p "~/.local/bin/netextender")
21   ↪ (file-exists-p "~/.ssh/sshvpn.gpg"))))
22 (defconst CLANG-FORMAT-P (+bool (executable-find "clang-format")))
23 (defconst LANGUAGE-TOOL-P (+bool (and (executable-find "language-tool") (string-match "\\(?:MANJARO\\|ARCH\\)"
24   ↪ operating-system-release))))

```

3.2 Doom modules (init.el)

Here is the literate configuration which generates the Doom's `init.el` file, this file contains all the enabled Doom modules with the appropriate flags.

This section defines the default source blocks arguments. All source blocks in this section inherits these headers, so they will not be tangled unless overwriting in the block's header.

3.2.1 File skeleton

This first section defines the template for the subsections, it uses the `no-web` syntax to include subsections specified as `<<sub-section-name>>`.

```

1  ;;; init.el -*- coding: utf-8-unix; lexical-binding: t; -*-
2
3  ;;; This file controls what Doom modules are enabled and what order they load in.
4  ;;; Press 'K' on a module to view its documentation, and 'gd' to browse its directory.
5
6  ;;; I add some special stuff wich I want to load very early.
7  (load! "pseudo-early-init.el")

```

```
8
9 (doom!
10   :input
11   <<doom-input>>
12
13   :completion
14   <<doom-completion>>
15
16   :ui
17   <<doom-ui>>
18
19   :editor
20   <<doom-editor>>
21
22   :emacs
23   <<doom-emacs>>
24
25   :term
26   <<doom-term>>
27
28   :checkers
29   <<doom-checkers>>
30
31   :tools
32   <<doom-tools>>
33
34   :os
35   <<doom-os>>
36
37   :lang
38   <<doom-lang>>
39
40   :email
41   <<doom-email>>
42
43   :app
44   <<doom-app>>
45
46   :config
47   <<doom-config>>
48 )
```

3.2.2 Input (:input)

Enable bidirectional languages support (*bid*).

```
1  bidi
```

3.2.3 General (:config)

Enable *literate* configuration (like this file!), and some defaults.

```
1  literate
2  (default +bindings +smartparens)
```

3.2.4 Completion (:completion)

I'm lazy, I like Emacs to complete my writings.

```
1  (vertico +icons)
2  company
```

3.2.5 User interface (:ui)

Enables some user interface features for better user experience, the beautiful `modeline`, the `treemacs` project tree, better version control integration with `vc-gutter`... and other useful stuff.

```
1 deft
2 doom
3 doom-dashboard
4 hl-todo
5 hydra
6 modeline
7 zen
8 ophints
9 nav-flash
10 (vc-gutter +diff-hl +pretty)
11 (window-select +numbers)
12 (ligatures +extra)
13 (popup +all +defaults)
14 (emoji +ascii +unicode +github)
15 (treemacs +lsp)
16 workspaces
```

3.2.6 Editor (:editor)

Some editing modules, the most important feature is `EVIL` to enable Vim style editing in Emacs. I like also to edit with multiple cursors, enable `yasnipet` support, wrap long lines, auto format support.

```
1 (evil +everywhere)
2 file-templates
3 fold
4 format
5 multiple-cursors
6 parinfer
7 snippets
8 word-wrap
```

3.2.7 Emacs builtin stuff (:emacs)

Beautify Emacs builtin packages.

```
1 (dired +dirvish +icons)
2 (ibuffer +icons)
3 (undo +tree)
4 vc
```

3.2.8 Terminals (:term)

Run commands in terminal from Emacs. I use mainly `vterm` on my local machine, however, I like to have `eshell`, `shell` and `term` installed to use them for remote file editing (via Tramp).

```
1 eshell
2 vterm
3 shell
4 term
```

3.2.9 Checkers (:checkers)

I like to check my documents for errors while I'm typing. The **grammar** module enables LanguageTool support.

```
1 (syntax +childframe)
2 (spell +aspell)
```

3.2.10 Tools (:tools)

I enable some useful tools which facilitate my work flow, I like to enable Docker support, EditorConfig is a good feature to have. I like to enable **lsp-mode** and **dap-mode** for coding and debugging by enabling the **lsp** and **debugger** modules with **+lsp** support (further customization for **lsp** and **dap** below). **pdf** adds support through **pdf-tools**, which are great for viewing PDF files inside Emacs, I also enable some extra tools, like **magit**, **lookup**, **tmux**... etc.

```
1 ein
2 pdf
3 rgb
4 gist
5 make
6 tmux
7 direnv
8 upload
9 tree-sitter
10 editorconfig
11 (lsp +peek)
12 (docker +lsp)
13 (magit +forge)
14 (debugger +lsp)
15 (eval +overlay)
16 (lookup +docsets +dictionary +offline)
```

3.2.11 Operating system (:os)

I enable **tty** for better support of terminal editing.

```
1 (tty +osc)
```

3.2.12 Language support (:lang)

Most of the projects I'm working on are mainly written in C/C++, Python, Rust and some Lisp stuff, I edit also a lot of configuration and data files in several formats (**csv**, **yaml**, **xml**, **json**, **shell** scripts...). I use Org-mode to manage all my papers and notes, so I need to enable as many features as I need, I do enable **plantuml** also to quickly plot UML models withing Org documents.

```
1 plantuml
2 emacs-lisp
3 common-lisp
4 data
5 qt
6 coq
7 (markdown +grip)
8 (ocaml +tree-sitter)

```

3.2.13 Email (:email)

I like to use `mu4e` to manage mail mailboxes. The `+org` flag adds `org-msg` support and `+gmail` adds better management of Gmail accounts.

```

1 (:if (executable-find "mu") (mu4e +org +gmail))

```

3.2.14 Apps (:app)

Emacs contains a ton of applications, some of them are supported by Doom, I like to use Emacs manage my calendar, chat on IRC, and receive news. I do use EMMS sometimes to play music without leaving Emacs, and I like to enable support for `emacs-everywhere`.

```

1 calendar
2 irc
3 emms
4 everywhere
5 (rss +org)

```

3.3 Additional packages (`packages.el`)

This section generates Doom's `packages.el`, with the associated configurations (`use-package!` blocks). This file shouldn't be byte compiled.

```

1 ;; -*- coding: utf-8-unix; no-byte-compile: t; -*-

```

4 General Emacs settings

4.1 User information

```

1 (setq user-full-name "Abdelhak Bougouffa"
2       user-mail-address "abougouffa@fedoraproject.org")

```

4.2 Secrets

Set the path to my GPG encrypted secrets. I like to set the cache expiry to `nil` instead of the default 2 hours.

```

1 (setq auth-sources '("~/authinfo.gpg")
2       auth-source-do-cache t
3       auth-source-cache-expiry 86400 ; All day, default is 2h (7200)
4       password-cache t
5       password-cache-expiry 86400)
6
7 (after! epa
8   (setq-default epa-file-encrypt-to '("F808A020A3E1AC37"))))

```

4.3 Better defaults

4.3.1 File deletion

Delete files by moving them to trash.

```
1 (setq-default delete-by-moving-to-trash t
2   trash-directory nil) ;; Use freedesktop.org trashcan
```

4.3.2 Window

Take new window space from all other windows (not just current).

```
1 (setq-default window-combination-resize t)
```

Split defaults Split horizontally to right, vertically below the current window.

```
1 (setq evil-vsplt-window-right t
2   evil-split-window-below t)
```

Show list of buffers when splitting.

```
1 (defadvice! prompt-for-buffer (&rest _)
2   :after '(evil-window-split evil-window-vsplt)
3   (consult-buffer))
```

4.3.3 Messages buffer

Stick to buffer tail, useful with `*Messages*` buffer. Derived from this answer.

```
1 (defvar +messages-buffer-auto-tail--enabled nil)
2
3 (defun +messages-buffer-auto-tail--advice (&rest arg)
4   "Make *Messages* buffer auto-scroll to the end after each message."
5   (let* ((buf-name (buffer-name (messages-buffer)))
6         ;; Create *Messages* buffer if it does not exist
7         (buf (get-buffer-create buf-name)))
8     ;; Activate this advice only if the point is _not_ in the *Messages* buffer
9     ;; to begin with. This condition is required; otherwise you will not be
10    ;; able to use `isearch' and other stuff within the *Messages* buffer as
11    ;; the point will keep moving to the end of buffer :P
12    (when (not (string= buf-name (buffer-name)))
13      ;; Go to the end of buffer in all *Messages* buffer windows that are
14      ;; *live* (`get-buffer-window-list' returns a list of only live windows).
15      (dolist (win (get-buffer-window-list buf-name nil :all-frames))
16        (with-selected-window win
17          (goto-char (point-max)))))
18      ;; Go to the end of the *Messages* buffer even if it is not in one of
19      ;; the live windows.
20      (with-current-buffer buf
21        (goto-char (point-max))))))
22
23 (defun +messages-buffer-toggle-auto-tail ()
24   "Auto tail the '*Messages*' buffer."
25   (interactive)
26   ;; Add/remove an advice from the 'message' function.
27   (cond (+messages-buffer-auto-tail--enabled
28         (advice-remove 'message '+messages-buffer-auto-tail--advice)
29         (setq +messages-buffer-auto-tail--enabled nil)
30         (message "+messages-buffer-auto-tail: Disabled."))
```

```

31 (t
32   (advice-add 'message :after '+messages-buffer-auto-tail--advice)
33   (setq +messages-buffer-auto-tail--enabled t)
34   (message "+messages-buffer-auto-tail: Enabled.))))

```

4.3.4 Undo and auto-save

There is a package bbatsov/super-save, maybe better than the default `auto-save-mode`.

```

1 (setq undo-limit 80000000    ;; Raise undo-limit to 80Mb
2   evil-want-fine-undo t    ;; By default while in insert all changes are one big blob. Be more granular
3   auto-save-default t      ;; Nobody likes to lose work, I certainly don't
4   scroll-preserve-screen-position 'always ;; Don't have `point' jump around
5   scroll-margin 2)         ;; It's nice to maintain a little margin

```

4.3.5 Editing

```

1 ;; Stretch cursor to the glyph width
2 (setq-default x-stretch-cursor t)
3
4 ;; Enable relative line numbers
5 (setq display-line-numbers-type 'relative)
6
7 ;; Iterate through CamelCase words
8 (global-subword-mode 1)

```

4.3.6 Emacs sources

```

1 (setq source-directory
2   (expand-file-name "~/Softwares/src/emacs"))

```

4.3.7 Frame

Focus created frame The problem is, every time I launch an Emacs frame (from KDE), Emacs starts with no focus, I need each time to `Alt-TAB` to get Emacs under focus, and then start typing. I tried changing this behavior from Emacs by hooking `raise-frame` at startup, but it didn't work.

Got from this comment, not working on my Emacs version.

```

1 ;; NOTE: Not tangled, not working
2 (add-hook 'server-switch-hook #'raise-frame)

```

After some investigations, I found that this issue is probably KDE specific, the issue goes away by setting: **Window Management > Window Behavior > Focus > Focus stealing prevention** to *None* in the KDE Settings.

5 Emacs daemon

5.1 Initialization

When the daemon is running, I almost always want to do a few particular things with it, so I may as well eat the load time at startup. We also want to keep `mu4e` running.

Lastly, while I'm not sure quite why it happens, but after a bit it seems that new Emacs client frames start on the `*scratch*` buffer instead of the dashboard. I prefer the dashboard, so let's ensure that's always switched to in new frames.

```

1 (defun +greedily-do-daemon-setup ()
2   ;; mu4e
3   (when (require 'mu4e nil t)
4     ;; Differ starting `mu4e'
5     (run-at-time 30 nil (lambda ()
6                           (setq mu4e-confirm-quit t)
7                           (mu4e--start))))
8
9   ;; RSS
10  (when (require 'elfeed nil t)
11    (run-at-time nil (* 8 60 60) #'elfeed-update)))
12
13  (when (daemonp)
14    (add-hook 'emacs-startup-hook #' +greedily-do-daemon-setup)
15    (add-hook! 'server-after-make-frame-hook
16              #'doom/reload-theme
17              (unless (string-match-p "\\*draft\\\\\\\\*stdin\\\\\\\\|emacs-everywhere" (buffer-name))
18                (switch-to-buffer +doom-dashboard-name))))

```

5.2 Tweaks

5.2.1 Save recent files

When editing files with Emacs client, the files does not get stored by `recentf`, making Emacs forgets about recently opened files. A quick fix is to hook the `recentf-save-list` command to the `delete-frame-functions` and `delete-terminal-functions` which gets executed each time a frame/terminal is deleted.

```

1 (when (daemonp)
2   (add-hook! '(delete-frame-functions delete-terminal-functions)
3             (recentf-save-list)))

```

6 Package configuration

6.1 User interface

6.1.1 Font

Doom exposes five (optional) variables for controlling fonts in Doom. Here are the three important ones: `doom-font`, `doom-unicode-font` and `doom-variable-pitch-font`. The `doom-big-font` is used for `doom-big-font-mode`; use this for presentations or streaming.

They all accept either a font-spec, font string ("Input Mono-12"), or xlfed font string. You generally only need these two:

Some good fonts:

- Iosevka Fixed (THE FONT)
- Nerd fonts
 - FantasqueSansMono Nerd Font Mono
 - mononoki Nerd Font Mono
 - CaskaydiaCove Nerd Font Mono
- Cascadia Code
- Fantasque Sans Mono
- JuliaMono (good Unicode support)
- IBM Plex Mono

- JetBrains Mono
- Roboto Mono
- Source Code Pro
- Input Mono Narrow
- Fira Code

```

1 (setq doom-font (font-spec :family "Iosevka Fixed" :size 20) ;; :weight 'light)
2   doom-big-font (font-spec :family "Iosevka Fixed" :size 30 :weight 'light)
3   doom-variable-pitch-font (font-spec :family "Andika") ;; inherits the :size from doom-font
4   doom-unicode-font (font-spec :family "JuliaMono")
5   doom-serif-font (font-spec :family "Input Serif" :weight 'light))

```

6.1.2 Theme

Doom Set Doom's theme, some good choices:

- doom-palenight
- doom-one
- doom-vibrant
- doom-dark+ (VS Code like)
- doom-tomorrow-night
- doom-xcode
- doom-material
- doom-ayu-mirage
- doom-monokai-pro

```

1 (setq doom-theme 'doom-one-light)
2 ;; (setq doom-theme 'modus-operandi)
3 (remove-hook 'window-setup-hook #'doom-init-theme-h)
4 (add-hook 'after-init-hook #'doom-init-theme-h 'append)

```

```

1 (package! modus-themes)

```

Modus

```

1 ;; NOTE: Not tangled, needs further customization for my taste
2 (use-package! modus-themes
3   :init
4   (setq modus-themes-hl-line '(accented)

64  (map! :leader
65        :prefix "t" ;; toggle
66        :desc "Toggle Modus theme" "m" #'modus-themes-toggle))

```

6.1.3 Mode line

Clock Display time and set the format to 24h.

```

1  (after! doom-modeline
2    (setq display-time-string-forms
3      '(((property (concat " " 24-hours ":" minutes))))))
4  (display-time-mode 1) ; Enable time in the mode-line

```

Battery Show battery level unless battery is not present or battery information is unknown.

```
1 (after! doom-modeline
2   (let ((battery-str (battery)))
3     (unless (or (equal "Battery status not available" battery-str)
4                 (string-match-p (regexp-quote "unknown") battery-str)
5                 (string-match-p (regexp-quote "N/A") battery-str))
6       (display-battery-mode 1))))
```

```
1 (setq doom-modeline-major-mode-icon t
2       doom-modeline-major-mode-color-icon t
3       doom-modeline-buffer-state-icon t)
```

Mode line customization

6.1.4 Set transparency

```
1 ;; NOTE: Not tangled
2 (set-frame-parameter (selected-frame) 'alpha '(97 100))
3 (add-to-list 'default-frame-alist '(alpha 97 100))
```

6.1.5 Dashboard

Custom splash image Change the logo to an image, a set of beautiful images can be found in `assets`.

File
emacs-e.svg
gnu-emacs-white.svg
gnu-emacs-flat.svg
blackhole-lines.svg
doom-emacs-white.svg
doom-emacs-dark.svg

```
1 (setq fancy-splash-image (expand-file-name "assets/emacs-e.png" doom-private-dir))
```

```
1 (remove-hook '+doom-dashboard-functions #'doom-dashboard-widget-shortmenu)
2 (add-hook! '+doom-dashboard-mode-hook (hl-line-mode -1)) ;; (hide-mode-line-mode 1)
3 (setq-hook! '+doom-dashboard-mode-hook evil-normal-state-cursor (list nil))
```

Dashboard

6.1.6 Which key

Make `which-key` popup faster.

```
1 (setq which-key-idle-delay 0.5 ;; Default is 1.0
2       which-key-idle-secondary-delay 0.05) ;; Default is nil
```

I've stolen this chunk (like many others) from `tecosaur`'s config, it helps to replace the `evil-` prefix with a unicode symbol, making `which-key`'s candidate list less verbose.

```
1 (setq which-key-allow-multiple-replacements t)
2
3 (after! which-key
4   (pushnew! which-key-replacement-alist
5     '("(" . "\\`+?evil[-:]?\\(?:a-\\)?\\(\\.\\|\\)" . (nil . "\\1"))
6     '("(" . "\\`+?evilem--?motion-\\(\\.\\|\\)" . (nil . "\\1")))))
```

6.1.7 Window title

I'd like to have just the buffer name, then if applicable the project folder.

```
1 (setq frame-title-format
2   '("("
3     (:eval
4       (if (s-contains-p org-roam-directory (or buffer-file-name ""))
5         (replace-regexp-in-string
6           "[0-9]*-?" " "
7           (subst-char-in-string ?_ ?  buffer-file-name))
8         "%b"))
9     (:eval
10      (let ((project-name (projectile-project-name)))
11        (unless (string= "-" project-name)
12          (format (if (buffer-modified-p) " %s" " %s") project-name))))))
```

6.1.8 Fringe

Increase the left fringe width, to enable rendering breakpoints (in debug modes) correctly.

```
1 (after! lsp-mode
2   (add-hook 'lsp-mode-hook (lambda () (set-fringe-mode '(20 . 20)))))
3
4 ;; The new `+pretty' flag in `vc-gutter' should fix this
5 ;; (after! org-modern
6 ;;   (add-hook 'org-modern-mode-hook (lambda () (set-fringe-mode '(20 . 20)))))
7
8 ;; ; Use slightly larger fringes, useful for `gutter'
9 ;; (setq-default left-fringe-width 10
10 ;;               right-fringe-width 10)
```

6.1.9 Vertico

Since `doom-emacs@ece4a74`, Doom supports the `+childframe` for `:completion` `vertico`. This can be used to adjust the left and right fringes.

```
1 (after! vertico-posframe
2   (setq vertico-posframe-parameters '((left-fringe . 12) (right-fringe . 14))
3     vertico-posframe-border-width 3))
```

6.1.10 Company

I do not find `company` useful in Org files.

```
1 (setq company-global-modes
2   '(not erc-mode
3     circe-mode
4     message-mode))
```

```

5      help-mode
6      gud-mode
7      vterm-mode
8      org-mode))

```

6.1.11 SVG tag

```

1 (package! svg-tag-mode)

```

```

1 (use-package! svg-tag-mode
2   :commands svg-tag-mode
3   :config
4   (setq svg-tag-tags
5     '(("^\\.* .* \\(:[A-Za-z0-9]+\\)" .
6       ((lambda (tag) (svg-tag-make)
7         tag
8         :beg 1
9         :font-family "Roboto Mono"
10        :font-size 6
11        :height 0.6
12        :padding 0
13        :margin 0)))
14     ("\\(:[A-Za-z0-9]+:\\)" .
15       ((lambda (tag) (svg-tag-make)
16         tag
17         :beg 1
18         :end -1
19         :font-family "Roboto Mono"
20         :font-size 6
21         :height 0.6
22         :padding 0
23         :margin 0))))))

```

6.1.12 Focus

Dim the font color of text in surrounding paragraphs, focus only on the current line.

```

1 (package! focus)

```

```

1 (use-package! focus
2   :commands focus-mode)

```

6.1.13 Smooth scrolling

```

1 (when (<= emacs-major-version 28)
2   (package! good-scroll))

```

```

1 (if (> emacs-major-version 28)
2   (pixel-scroll-precision-mode 1)
3   (use-package! good-scroll
4     :config (good-scroll-mode 1)))

```

6.1.14 All the icons

Set some custom icons for some file extensions, basically for `.m` files.

```
1 (after! all-the-icons
2   (setcdr (assoc "m" all-the-icons-extension-icon-alist)
3     (cdr (assoc "matlab" all-the-icons-extension-icon-alist))))
```

6.2 Editing

6.2.1 Scratch buffer

Tell the scratch buffer to start in `emacs-lisp-mode`.

```
1 (setq doom-scratch-initial-major-mode 'emacs-lisp-mode)
```

6.2.2 Mouse buttons

Map extra mouse buttons to jump between buffers

```
1 (map! :n [mouse-8] #'better-jumper-jump-backward
2       :n [mouse-9] #'better-jumper-jump-forward)
```

6.2.3 Page break lines

A feature that displays ugly form feed characters as tidy horizontal rules. Inspired by M-EMACS.

```
1 (package! page-break-lines)
```

```
1 (use-package! page-break-lines
2   :diminish
3   :init (global-page-break-lines-mode))
```

6.2.4 Binary files

Taken from this answer.

```
1 (defun +hexl/buffer-binary-p (&optional buffer)
2   "Return whether BUFFER or the current buffer is binary.
3
4   A binary buffer is defined as containing at least one null byte.
5
6   Returns either nil, or the position of the first null byte."
7   (with-current-buffer (or buffer (current-buffer))
8     (save-excursion (goto-char (point-min))
9       (search-forward (string ?\x00) nil t 1))))
10
11 (defun +hexl/hexl-if-binary ()
12   "If `hexl-mode' is not already active, and the current buffer
13   is binary, activate `hexl-mode'."
14   (interactive)
15   (unless (eq major-mode 'hexl-mode)
16     (when (+hexl/buffer-binary-p)
17       (hexl-mode))))
18
19 (add-to-list 'magic-fallback-mode-alist '(+hexl/buffer-binary-p . hexl-mode) t)
```

6.2.5 Very large files

The *very large files* mode loads large files in chunks, allowing one to open ridiculously large files.

```
1 (package! vlf)
```

To make VLF available without delaying startup, we'll just load it in quiet moments.

```
1 (use-package! vlf-setup
2   :defer-incrementally vlf-tune vlf-base vlf-write vlf-search vlf-occur vlf-follow vlf-ediff vlf)
```

6.2.6 Evil

I'm not using `evil-escape`, lets disable it.

```
1 (package! evil-escape :disable t)
```

```
1 (after! evil
2   (setq evil-kill-on-visual-paste nil)) ; Don't put overwritten text in the kill ring
```

6.2.7 Aggressive indent

```
1 (package! aggressive-indent)
```

```
1 (use-package! aggressive-indent
2   :commands (aggressive-indent-mode))
```

6.2.8 YASnippet

Nested snippets are good, enable that.

```
1 (setq yas-triggers-in-field t)
```

6.3 Literate configuration

6.3.1 Allow babel execution in doom CLI actions

This file generates all my Doom config files, it works nicely, but for it to work with `doom sync` et al. I need to make sure that Org doesn't try to confirm that I want to allow evaluation (I do!).

Thankfully Doom supports `$DOOMDIR/cli.el` file which is sourced every time a CLI command is run, so we can just enable evaluation by setting `org-confirm-babel-evaluate` to `nil` there.

While we're at it, we should silence `org-babel-execute-src-block` to avoid polluting the output.

```
1 ;;; cli.el -*- lexical-binding: t; -*-
2 (setq org-confirm-babel-evaluate nil)
3
4 (defun doom-shut-up-a (orig-fn &rest args)
5   (quiet! (apply orig-fn args)))
6
7 (advice-add 'org-babel-execute-src-block :around #'doom-shut-up-a)
```

6.3.2 Asynchronous tangling

Doom adds an `org-mode` hook `+literate-enable-recompile-h`. This is a nice idea, but it's too blocking for my taste. Since I trust my tangling to be fairly straightforward, I'll just redefine it to a simpler, async, function.

```

1 (defvar +literate-tangle--proc nil)
2 (defvar +literate-tangle--proc-start-time nil)
3
4 (defadvice! +literate-tangle-async-h ()
5   "A very simplified version of `+literate-tangle-h`, but async."
6   :override #' +literate-tangle-h
7   (unless (getenv "__NOTANGLE")
8     (let ((default-directory doom-private-dir))
9       (when +literate-tangle--proc
10         (message "Killing outdated tangle process...")
11         (set-process-sentinel +literate-tangle--proc #'ignore)
12         (kill-process +literate-tangle--proc)
13         (sit-for 0.3)) ; ensure the message is seen for a bit
14       (setq +literate-tangle--proc-start-time (float-time)
15             +literate-tangle--proc
16             (start-process "tangle-config"
17                           (get-buffer-create " *tangle config*")
18                           "emacs" "--batch" "--eval"
19                           (format "(progn \
20 (require 'ox) \

```

```
60
61 (add-to-list 'treemacs-ignored-file-predicates #'treemacs-ignore-filter))
```

6.4.2 Projectile

Doom Emacs defined a function `(doom-project-ignored-p path)` and uses it with `projectile-ignored-project-function`. So we will create a wrapper function which calls Doom's one, with an extra check.

```
1 ;; Run `M-x projectile-discover-projects-in-search-path' to reload paths from this variable
2 (setq projectile-project-search-path
3   '("~/PhD/papers"
4     "~/PhD/workspace"
5     "~/PhD/workspace-no"
6     "~/PhD/workspace-no/ez-wheel/swd-starter-kit-repo"
7     ("~/Projects/foss" . 2))) ;; ("dir" . depth)
8
9 (setq projectile-ignored-projects
10   '("/tmp"
11     "~/."
12     "~/.cache"
13     "~/.doom.d"
14     "~/.emacs.d/.local/straight/repos/"))
15
16 (setq +projectile-ignored-roots
17   '("~/."
18     ;; No need for this one, as `doom-project-ignored-p' checks for files in `doom-local-dir'
19     "~/.emacs.d/.local/straight/"))
20
21 (defun +projectile-ignored-project-function (filepath)
22   "Return t if FILEPATH is within any of `+projectile-ignored-roots'"
23   (require 'cl-lib)
24   (or (doom-project-ignored-p filepath) ;; Used by default by doom with `projectile-ignored-project-function'
25       (cl-some (lambda (root) (file-in-directory-p (expand-file-name filepath) (expand-file-name root)))
26                 +projectile-ignored-roots)))
27
28 (setq projectile-ignored-project-function #' +projectile-ignored-project-function)
```

6.4.3 Tramp

Let's try to make tramp handle prompts better

```
1 (after! tramp
2   (setenv "SHELL" "/bin/bash")
3   (setq tramp-shell-prompt-pattern "\\(?:~\\|
4     \\)[^$%>\\n]*#[^$%> ] *\\(\\[[0-9;]*[a-zA-Z] *\\))*")) ;; default +
```

6.4.4 Eros-eval

This makes the result of evals slightly prettier.

```
1 (setq eros-eval-result-prefix " ")
```

6.4.5 dir-locals.el

Reload `dir-locals.el` variables after modification. Taken from this answer.

```

1 (defun +dir-locals-reload-for-current-buffer ()
2   "reload dir locals for the current buffer"
3   (interactive)
4   (let ((enable-local-variables :all))
5     (hack-dir-local-variables-non-file-buffer)))
6
7 (defun +dir-locals-reload-for-all-buffers-in-this-directory ()
8   "For every buffer with the same `default-directory` as the
9   current buffer's, reload dir-locals."
10  (interactive)
11  (let ((dir default-directory))
12    (dolist (buffer (buffer-list))
13      (with-current-buffer buffer
14        (when (equal default-directory dir)
15          (+dir-locals-reload-for-current-buffer))))))
16
17 (defun +dir-locals-enable-autoreload ()
18   (when (and (buffer-file-name)
19             (equal dir-locals-file (file-name-nondirectory (buffer-file-name))))
20     (message "Dir-locals will be reloaded after saving.")
21     (add-hook 'after-save-hook '+dir-locals-reload-for-all-buffers-in-this-directory nil t)))
22
23 (add-hook! '(emacs-lisp-mode-hook lisp-data-mode-hook) #' +dir-locals-enable-autoreload)

```

6.4.6 Language Server Protocol

Eglot Eglot uses `project.el` to detect the project root. This is a workaround to make it work with `projectile`:

```

1 (after! eglot
2   ;; A hack to make it works with projectile
3   (defun projectile-project-find-function (dir)
4     (let* ((root (projectile-project-root dir))
5            (and root (cons 'transient root))))
6
7     (with-eval-after-load 'project
8       (add-to-list 'project-find-functions 'projectile-project-find-function))
9
10  ;; Use clangd with some options
11  (set-eglot-client! 'c++-mode '("clangd" "-j=3" "--clang-tidy")))

```

LSP mode

Enable some useful UI stuff LSP mode provides a set of configurable UI stuff. By default, Doom Emacs disables some UI components; however, I like to enable some less intrusive, more useful UI stuff.

```

1 (after! lsp-ui
2   (setq lsp-ui-sideline-enable t
3         lsp-ui-sideline-show-code-actions t
4         lsp-ui-sideline-show-diagnostics t
5         lsp-ui-sideline-show-hover nil
6         lsp-log-io nil
7         lsp-lens-enable t ; not working properly with ccls!
8         lsp-diagnostics-provider :auto
9         lsp-enable-symbol-highlighting t
10        lsp-headerline-breadcrumb-enable nil
11        lsp-headerline-breadcrumb-segments '(symbols)))

```

```

1 (after! lsp-clangd
2   (setq lsp-clients-clangd-args
3     '("--j=4"
4       "--background-index"
5       "--clang-tidy"
6       "--completion-style=detailed"
7       "--header-insertion=never"
8       "--header-insertion-decorators=0"))
9   (set-lsp-priority! 'clangd 1))

```

LSP mode with clangd

```

1 ;; NOTE: Not tangled, using the default ccls
2 (after! ccls
3   (setq ccls-initialization-options
4     '(:index (:comments 2
5              :trackDependency 1
6              :threads 4)
7       :completion (:detailedLabel t)))
8   (set-lsp-priority! 'ccls 2)) ; optional as ccls is the default in Doom

```

LSP mode with ccls

Enable lsp over tramp

1. Python

```

1 (after! tramp
2   (require 'lsp-mode)
3   ;; (require 'lsp-pyright)
4
5   (setq lsp-enable-snippet nil
6         lsp-log-io nil
7         ;; To bypass the "lsp--document-highlight fails if
8         ;; textDocument/documentHighlight is not supported" error
9         lsp-enable-symbol-highlighting nil)
10
11   (lsp-register-client

16                lsp-clients-clangd-args)))
17      :major-modes '(c-mode c++-mode objc-mode cuda-mode)
18      :remote? t
19      :server-id 'clangd-remote)))

```

VHDL By default, LSP uses the proprietary VHDL-Tool to provide LSP features; however, there is free and open source alternatives: `ghdl-ls` and `rust_hdl`. I have some issues running `ghdl-ls` installed from `pip` through the `pyghdl` package, so let's use `rust_hdl` instead.

```

1 (use-package! vhd1-mode
2   :hook (vhd1-mode . #'lsp-vhd1-ls-load)
3   :init
4   (defun +lsp-vhd1-ls-load ()
5     (interactive)
6     (lsp t)
7     (flycheck-mode t))
8
9   :config
10  ;; Required unless vhd1_ls is on the $PATH
11  (setq lsp-vhd1-server-path "~/Projects/foss/repos/rust_hdl/target/release/vhd1_ls"
12        lsp-vhd1-server 'vhd1-ls
13        lsp-vhd1--params nil)
14  (require 'lsp-vhd1))

```

```

1 (package! lsp-sonarlint)

```

SonarLint

```

1 ;; TODO: configure it, for the moment, it seems that it doesn't support C/C++

```

6.4.7 Cppcheck

Check for everything!

```

1 (after! flycheck
2   (setq flycheck-cppcheck-checks '("information"
3                                   "missingInclude"
4                                   "performance"
5                                   "portability"
6                                   "style"
7                                   "unusedFunction"
8                                   "warning"))) ;; Actually, we can use "all"

```

6.4.8 Project CMake

A good new package to facilitate using CMake projects with Emacs, it glues together `project`, `eglot`, `cmake` and `clangd`.

```

1 (package! project-cmake
2   :disable (not (featurep! :tools lsp +eglot)) ; Enable only if (lsp +eglot) is used
3   :recipe (:host github
4           :repo "juanjosegarciaripoll/project-cmake"))

```

```

1 (use-package! project-cmake
2   :config
3   (require 'eglot)
4   (project-cmake-scan-kits)
5   (project-cmake-eglot-integration))

```

6.4.9 Clang-format

```

1 (package! clang-format)

```

```

1 (use-package! clang-format
2   :when CLANG-FORMAT-P
3   :commands (clang-format-region))

```

6.4.10 Auto-include C++ headers

```

1 (package! cpp-auto-include
2   :recipe (:host github
3           :repo "emacsorphanage/cpp-auto-include"))

```

```

1 (use-package! cpp-auto-include
2   :commands cpp-auto-include)

```

6.4.11 Emacs Refactor

```
1 (package! erefactor
2   :recipe (:host github
3           :repo "mhayashi1120/Emacs-erefactor"))
```

```
1 (use-package! erefactor
2   :defer t)
```

6.5 Symbols

6.5.1 Emojify

For starters, twitter's emojis look nicer than emoji-one. Other than that, this is pretty great OOTB .

```
1 (setq emojify-emoji-set "twemoji-v2")
```

One minor annoyance is the use of emojis over the default character when the default is actually preferred. This occurs with overlay symbols I use in Org mode, such as checkbox state, and a few other miscellaneous cases.

We can accommodate our preferences by deleting those entries from the emoji hash table

```

1 (defvar emojiify-disabled-emojis
2   '(;; Org
3     " " " " " " " " " " " " " " " " " " " " "@ " " " " " " " " " "
4     ;; Terminal powerline
5     " "
6     ;; Box drawing
7     " " " ")
8   "Characters that should never be affected by `emojiify-mode'.")
9
10 (defadvice! emojiify-delete-from-data ()
11   "Ensure `emojiify-disabled-emojis' don't appear in `emojiify-emojis'."
12   :after #'emojiify-set-emoji-data
13   (dolist (emoji emojiify-disabled-emojis)
14     (remhash emoji emojiify-emojis)))
```

Now, it would be good to have a minor mode which allowed you to type ascii/gh emojis and get them converted to unicode. Let's make one.

```

1 (defun emojiify--replace-text-with-emoji (orig-fn emoji text buffer start end &optional target)
2   "Modify `emojiify--propertize-text-for-emoji' to replace ascii/github emoticons with unicode emojis, on the
   ↪ fly."
3   (if (or (not emoticon-to-emoji) (= 1 (length text)))
4       (funcall orig-fn emoji text buffer start end target)
5       (delete-region start end)
6       (insert (ht-get emoji "unicode"))))
7
8 (define-minor-mode emoticon-to-emoji
9   "Write ascii/gh emojis, and have them converted to unicode live."
10  :global nil
11  :init-value nil
12  (if emoticon-to-emoji
13      (progn
14        (setq-local emojiify-emoji-styles '(ascii github unicode))
15        (advice-add 'emojiify--propertize-text-for-emoji :around #'emojiify--replace-text-with-emoji)
16        (unless emojiify-mode
17          (emojiify-turn-on-emojiify-mode)))
18      (setq-local emojiify-emoji-styles (default-value 'emojiify-emoji-styles))
19      (advice-remove 'emojiify--propertize-text-for-emoji #'emojiify--replace-text-with-emoji)))

```

This new minor mode of ours will be nice for messages, so let's hook it in for Email and IRC.

```
1 (add-hook! '(mu4e-compose-mode org-msg-edit-mode circe-channel-mode) (emoticon-to-emoji 1))
```

6.5.2 Ligatures

Extra ligatures are good, however, I'd like to see my keywords! Let's disable them in C/C++, Rust and Python modes. In addition to that, Lisps do replace lambdas with the greek symbol λ , however, this cause miss formatting and sometimes messes up with the parenthesis, so let's disable ligatures on Lisps.

```
1 (defun +appened-to-negation-list (head tail)
2   (if (sequencep head)
3     (delete-dups
4       (if (eq (car tail) 'not)
5         (append head tail)
6         (append tail head)))
7     tail))
8
9 (setq +ligatures-extras-in-modes
10      (+appened-to-negation-list
11       +ligatures-extras-in-modes
12       '(not c-mode c++-mode emacs-lisp-mode python-mode scheme-mode racket-mode rust-mode)))
13
14 (setq +ligatures-in-modes
15      (+appened-to-negation-list
16       +ligatures-in-modes
17       '(not emacs-lisp-mode scheme-mode racket-mode)))
```

6.6 Checkers (spell & grammar)

6.6.1 Spell-Fu

Install the `aspell` back-end and the dictionaries to use with `spell-fu`

```
sudo pacman -S aspell aspell-en aspell-fr
```

Now, `spell-fu` supports multiple languages! Let's add English, French and Arabic. So I can “mélanger les langues sans avoir de problèmes!”.

```
1 (after! spell-fu
2   (defun +spell-fu-register-dictionary (lang)
3     "Add `LANG` to spell-fu multi-dict, with a personal dictionary."
4     ;; Add the dictionary
5     (spell-fu-dictionary-add (spell-fu-get-ispell-dictionary lang))
6     (let ((personal-dict-file (expand-file-name (format "aspell.%s.pws" lang) doom-private-dir)))
7       ;; Create an empty personal dictionary if it doesn't exists
8       (unless (file-exists-p personal-dict-file) (write-region "" nil personal-dict-file))
9       ;; Add the personal dictionary
10      (spell-fu-dictionary-add (spell-fu-get-personal-dictionary (format "%s-personal" lang)
11        personal-dict-file))))
12
13 (add-hook 'spell-fu-mode-hook
14   (lambda ()
15     (+spell-fu-register-dictionary "en")
16     (+spell-fu-register-dictionary "fr"))))
```

6.6.2 Guess language

Can be interesting for automatically switching the language for spell checking, grammar...

```

1 (package! guess-language
2   :recipe (:host github
3           :repo "tmalsburg/guess-language.el"))

```

```

1 (use-package! guess-language
2   :config
3   (setq guess-language-languages '(en fr ar)
4         guess-language-min-paragraph-length 35
5         guess-language-langcodes '((en . ("en_US" "English" " " "English"))
6                                       (fr . ("français" "French" " " "Français"))
7                                       (ar . ("arabic" "Arabic" " " "Arabic"))))
8   ;; :hook (text-mode . guess-language-mode)
9   :commands (guess-language
10              guess-language-mode
11              guess-language-region
12              guess-language-mark-lines))

```

6.6.3 Grammarly

Use either `eglot-grammarly` or `lsp-grammarly`.

```

1 (package! grammarly

```

LTeX Originally, LTeX LS stands for *L^AT_EX Language Server*, it acts as a Language Server for L^AT_EX, but not only. It can check the grammar and the spelling of several markup languages such as BibTeX, ConTeXt, L^AT_EX, Markdown, Org, reStructuredText... and others. Alongside, it provides interfacing with LanguageTool to implement natural language checking.

TO BE WATCHED: Other WIP LanguageTool LSP implementations for both LSP Mode and Eglot can be interesting. However, LTeX seems to be a good solution, as it understands the structure of plain text formats such as Org and Markdown, which reduces the false positives due to the marking and special commands.

7             ag-project-files
8             ag-project-regex))
```

6.8.8 Emacs Application Framework

EAF is presented as: *A free/libre and open-source extensible framework that revolutionizes the graphical capabilities of Emacs*. Or the key to ultimately *Live in Emacs*.

First, install EAF as specified in the project's readme. To update EAF, we need to run `git pull ; ./install-eaf.py` in `lisp/emacs-application-framework` and `(M-x eaf-install-and-update)` in Emacs. This updates EAF, applications and their dependencies.

```

```

7.4 VPN configuration

7.4.1 NetExtender wrapper

I store my NetExtender VPN parameters in a GPG encrypted file. The credentials file contains a line of private parameters to pass to *netExtender*, like this:

```

1 echo "-u <USERNAME> -d <DOMAINE> -p <PASSWORD> -s <SERVER_IP>" \
2 | gpg -c > sslvpn.gpg

```

Then I like to have a simple script which decrypt the credentials and launch a session via the *netExtender* command.

```

1 #!/bin/bash
2
3 if ! command -v netExtender &> /dev/null
4 then
5   echo "netExtender not found, installing from AUR using 'yay'"
6   yay -S netextender
7 fi
8
9 MY_LOGIN_PARAMS_FILE="$HOME/.ssh/sslvpn.gpg"
10
11 echo "Y\n" | netExtender --auto-reconnect \
12 $(gpg -q --for-your-eyes-only --no-tty -d "${MY_LOGIN_PARAMS_FILE}")

```

7.4.2 Emacs + NetExtender

```

1 (when NETEXTENDER-P
2   (defvar +netextender-process-name "netextender")
3   (defvar +netextender-buffer-name " *NetExtender*")
4   (defvar +netextender-command '("~/local/bin/netextender"))
5
6   (defun +netextender-start ()
7     "Launch a NetExtender VPN session"
8     (interactive)
9     (unless (get-process +netextender-process-name)
10      (if (make-process :name +netextender-process-name
11                       :buffer +netextender-buffer-name
12                       :command +netextender-command)
13          (message "Started NetExtender VPN session")
14          (message "Cannot start NetExtender"))))

```

```

15
16 (defun +netextender-kill ()
17   "Kill the created NetExtender VPN session"
18   (interactive)
19   (when (get-process +netextender-process-name)
20     (if (kill-buffer +netextender-buffer-name)
21         (message "Killed NetExtender VPN session")
22         (message "Cannot kill NetExtender")))))

```

7.5 Email mu4e

Configuring mu4e as email client needs three parts:

- Incoming mail configuration IMAP (using mbsync)
- Outgoing mail configuration SMTP (using smtpmail or msmtplib)
- Email indexer and viewer (via mu and mu4e)

7.5.1 IMAP (mbsync)

You will need to:

- Install mu and isync (`sudo pacman -S mu isync`)
- Set up a proper configuration file for your accounts at `~/.mbsyncrc`
- Run `mu init --maildir=~/.Maildir --my-address=user@host1 --my-address=user@host2`
- Run `mbsync -c ~/.mbsyncrc -a`
- For sending mails from mu4e, add a `~/.authinfo` file, file contains a line in this format `machine MAIL.DOMAIN.TLD login USER port 587 password PASSWD`
- Encrypt the `~/.authinfo` file using GPG `gpg -c ~/.authinfo` and delete the original unencrypted file.

I use a `mbsyncrc` file for multi-accounts, with some hacks for Gmail accounts (to rename the [Gmail]/... folders). Here is an explained configuration example.

In the configuration file, there is a parameter named `Pass` which should be set to the password in plain text. Most of the examples you can find online uses this parameter, but in real life, nobody uses it, it is extremely unsafe to put the password in plain text configuration file. Instead, `mbsync` configuration file provides the alternative `PassCmd` parameter, which can be set to an arbitrary shell command which gets the password for you. You can set it for example to call the `pass` password manager to output the account password, or to `bw` command (for Bitwarden users). For me, I'm using it with Emacs' `~/.authinfo.gpg`, the `PassCmd` in my configuration uses GPG and `awk` to decrypt and filter the file content to find the required account's password. I set `PassCmd` to something like this:

```

1 gpg -q --for-your-eyes-only --no-tty --logger-file /dev/null --batch -d ~/.authinfo.gpg | awk '/machine
  ↳ smtp\.googlemail\.com login username@gmail\.com/ {print $NF}'

```

Remember the line format in the `~/.authinfo.gpg` file:

```

1 machine smtp.googlemail.com login username@gmail.com port 587 password PASSWD

```

This `PassCmd` command above, decrypts the `~/.authinfo.gpg`, passes it to `awk` to search the line containing "machine smtp.googlemail.com login username@gmail.com" and prints the last field (the last field `$NF` in the `awk` command corresponds to the password, as you can see in the line format).

The whole `~/.mbsync` file should look like this:

```

1  # mbsync config file
2  # GLOBAL OPTIONS
3  BufferLimit 50mb           # Global option: Default buffer size is 10M, too small for modern machines.
4  Sync All                  # Channels global: Sync everything "Pull Push New ReNew Delete Flags" (default
   ↪ option)
5  Create Both              # Channels global: Automatically create missing mailboxes on both sides
6  Expunge Both            # Channels global: Delete messages marked for deletion on both sides
7  CopyArrivalDate yes     # Channels global: Propagate arrival time with the messages

7.5.2 SMTP (msmtp)

I was using the standard `smtpmail` to send mails; but recently, I'm getting problems when sending mails. I passed a whole day trying to fix mail sending for one of my accounts, at the end of the day, I got a working setup; BUT, sending the first mail always ask me about password! I need to enter the password to be able to send the mail, Emacs asks me then if I want to save it to `~/.authinfo.gpg`, when I confirm saving it, it got duplicated in the `.authinfo.gpg` file.

This seems to be a bug; I also found somewhere that `smtpmail` is buggy, and that `msmtp` seems to be a good alternative, so now I'm using a `msmtp`-based setup, and it works like a charm!

For this, we will need an additional configuration file, `~/.msmtpsrc`, I configure it the same way as `mbsync`,

specifying this time SMTP servers instead of IMAP ones. I extract the passwords from `~/.authinfo.gpg` using GPG and `awk`, the same way we did in `mbsync`'s configuration.

The following is a sample file `~/.msmtp.rc`.

```

1  # Set default values for all following accounts.
2  defaults
3  auth                on
4  tls                 on
5  tls_starttls        on
6  tls_trust_file       /etc/ssl/certs/ca-certificates.crt
7  logfile              ~/.msmtp.log
8
9  # Gmail
10 account              gmail
11 auth                 plain
12 host                 smtp.googlemail.com
13 port                 587
14 from                 username@gmail.com
15 user                 username
16 passwordval          "gpg -q --for-your-eyes-only --no-tty --logger-file /dev/null --batch -d
   ↪ ~/.authinfo.gpg | awk '/machine smtp.googlemail.com login .*/@gmail.com/ {print $NF}'"
17 add_missing_date_header on
18
19 ## Gmail - aliases
20 account              alias-account : gmail
21 from                 alias@mail.com
22
23 account              other-alias : gmail
24 from                 other.alias@address.org
25
26 # Work

7.7 Multimedia

I like to use an MPD powered EMMS, so when I restart Emacs I do not lose my music.

7.7.1 MPD, MPC, and MPV

```

1 ;; Not sure if it is required!
2 (after! mpc
3   (setq mpc-host "localhost:6600"))

```

I like to launch the music daemon `mpd` using `Systemd`, let's define some commands in Emacs to start/kill the server:

```

1 (defun +mpd-daemon-start ()
2   "Start MPD, connects to it and syncs the metadata cache."
3   (interactive)
4   (let ((mpd-daemon-running-p (+mpd-daemon-running-p)))
5     (unless mpd-daemon-running-p
6       ;; Start the daemon if it is not already running.
7       (setq mpd-daemon-running-p (zerop (call-process "systemctl" nil nil nil "--user" "start" "mpd.service"))))
8     (cond ((+mpd-daemon-running-p)
9           (+mpd-mpc-update)
10          (emms-player-mpd-connect)
11          (emms-cache-set-from-mpd-all)
12          (message "Connected to MPD!"))
13          (t
14           (warn "An error occurred when trying to start Systemd mpd.service."))))))
15
16 (defun +mpd-daemon-stop ()
17   "Stops playback and kill the MPD daemon."
18   (interactive)
19   (emms-stop)
20   (call-process "systemctl" nil nil nil "--user" "stop" "mpd.service")
21   (message "MPD stopped!"))
22
23 (defun +mpd-daemon-running-p ()

```

7.7.4 Keybindings

Lastly, let's define the keybindings for these commands, under <leader> l m.

```

1 (map! :leader :prefix ("l" . "custom")
2   (:when (featurep! :app emms)
3     :prefix ("m" . "media")
4     :desc "Playlist go" "g" #'emms-playlist-mode-go
5     :desc "Add playlist" "D" #'emms-add-playlist
6     :desc "Toggle random playlist" "r" #'emms-toggle-random-playlist
7     :desc "Add directory" "d" #'emms-add-directory
8     :desc "Add file" "f" #'emms-add-file
9     :desc "Smart browse" "b" #'emms-smart-browse
10    :desc "Play/Pause" "p" #'emms-pause

```

```

11 :desc "Start" "S" #'emms-start
12 :desc "Start" "S" #'emms-start
13 :desc "Stop" "s" #'emms-stop))

```

Then we add MPD related keybindings if MPD is used.

```

1 (map! :leader
2 :prefix ("l m")
3 (:when (and (featurep! :app emms) MPD-P)
4 :prefix ("m" . "mpd/mpc")
5 :desc "Start daemon" "s" #'mpd-daemon-start
6 :desc "Stop daemon" "k" #'mpd-daemon-stop
7 :desc "EMMS player (MPD update)" "R" #'emms-player-mpd-update-all-reset-cache
8 :desc "Update database" "u" #'mpd-mpc-update))

```

7.7.5 Cycle song information in mode line

I found a useful package named `emms-mode-line-cycle` which permits to do this; however, it has not been updated since a while, it uses some obsolete functions to draw icon in mode line, so I forked it, got rid of the problematic parts, and added some minor stuff.

```

1 (package! emms-mode-line-cycle
2 :recipe (:host github
3 :repo "abougouffa/emms-mode-line-cycle"))

```

```

1 (use-package! emms-mode-line-cycle
2 :after emms
3 :config
4 (setq emms-mode-line-cycle-max-width 15
5 emms-mode-line-cycle-additional-space-num 4
6 emms-mode-line-cycle-any-width-p nil
7 emms-mode-line-cycle-velocity 4)
8
9 ;; Some music files do not have metadata, by default, the track title
10 ;; will be the full file path, so, if I detect what seems to be an absolute
11 ;; path, I trim the directory part and get only the file name.
12 (setq emms-mode-line-cycle-current-title-function
13 (lambda ()
14 (let ((name (emms-track-description (emms-playlist-current-selected-track))))
15 (if (file-name-absolute-p name) (file-name-base name) name))))
16
17 ;; Mode line formatting settings
18 ;; This format complements the 'emms-mode-line-format' one.
19 (setq emms-mode-line-format " %s " ;;
20 ;; To hide the playing time without stopping the cycling.
21 emms-playing-time-display-format "")
22
23 (defun +emms-mode-line-toggle-format-hook ()
24 "Toggle the 'emms-mode-line-format' string, when playing or paused."
25 (setq emms-mode-line-format (concat " " (if emms-player-paused-p " " " ") " %s ")))
26 ;; Force a sync to get the right song name over MPD in mode line
27 (when MPD-P (emms-player-mpd-sync-from-mpd))
28 ;; Trigger a forced update of mode line (useful when pausing)
29 (emms-mode-line-alter-mode-line))
30
31 ;; Hook the function to the 'emms-player-paused-hook'
32 (add-hook 'emms-player-paused-hook '+emms-mode-line-toggle-format-hook)
33
34 (emms-mode-line-cycle 1))

```

7.8 Maxima

The Maxima CAS comes bundled with three Emacs modes: `maxima`, `imaxima` and `emaxima`; installed by default in `"/usr/share/emacs/site-lisp/maxima"`.

7.8.1 Maxima

The `emacs-mirror/maxima` seems more up-to-date, and supports completion via `Company`, so let's install it from GitHub. Note that, normally, we don't need to specify a recipe; however, installing it directly seems to not install `company-maxima.el` and `poly-maxima.el`.

```

1 (package! maxima
2   :recipe (:host github
3           :repo "emacs-mirror/maxima"
4           :files (:defaults
5                  "keywords"
6                  "company-maxima.el"
7                  "poly-maxima.el"))))

```

```

1 (use-package! maxima
2   :when MAXIMA-P
3   :commands (maxima-mode maxima-inferior-mode maxima)
4   :init
5   (require 'straight) ;; to use `straight-build-dir' and `straight-base-dir'
6   (setq maxima-font-lock-keywords-directory ;; a workaround to undo the straight workaround!
7         (expand-file-name (format "straight/%s/maxima/keywords" straight-build-dir straight-base-dir)))
8
9   ;; The `maxima-hook-function' setup `company-maxima'.
10  (add-hook 'maxima-mode-hook #'maxima-hook-function)
11  (add-hook 'maxima-inferior-mode-hook #'maxima-hook-function)
12  (add-to-list 'auto-mode-alist '("\\.ma[cs]\\." . maxima-mode)))

```

7.8.2 IMaxima

For the `imaxima` (Maxima with image support), the `emacs-sattic/imaxima` seems outdated compared to the `imaxima` package of the official Maxima distribution, so let's install `imaxima` from the source code of Maxima, hosted on Sourceforge `git.code.sf.net/p/maxima/code`. The package files are stored in the repository's subdirectory `interfaces/emacs/imaxima`.

```

1 ;; Use the `imaxima' package bundled with the official Maxima distribution.
2 (package! imaxima
3   :recipe (:host nil ;; Unsupported host, we will specify the complete repo link
4           :repo "https://git.code.sf.net/p/maxima/code"
5           :files ("interfaces/emacs/imaxima/*"))))

```

```

1 (use-package! imaxima
2   :when MAXIMA-P
3   :commands (imaxima imath-mode)
4   :init
5   (setq imaxima-use-maxima-mode-flag nil ;; otherwise, it don't render equations with LaTeX.
6         imaxima-scale-factor 2.0)
7
8   ;; Hook the `maxima-inferior-mode' to get Company completion.
9   (add-hook 'imaxima-startup-hook #'maxima-inferior-mode))

```

7.9 FriCAS

The FriCAS comes bundled with an Emacs mode, let's load it.

```

1 (use-package! fricas
2   :when FRICAS-P
3   :load-path "/usr/lib/fricas/emacs"
4   :commands (fricas-mode fricas-eval fricas))

```

8 Programming

8.1 File templates

For some file types, we can overwrite the defaults in the snippets' directory.

```

1 (set-file-template! "\\\\.tex$" :trigger "--" :mode 'latex-mode)
2 (set-file-template! "\\\\.org$" :trigger "--" :mode 'org-mode)
3 (set-file-template! "/LICEN[CS]E$" :trigger '+file-templates/insert-license)

```

8.2 CSV rainbow

Stolen from here.

```

1 (after! csv-mode
2   ;; TODO: Need to fix the case of two commas, example "a,b,,c,d"
3   (require 'cl-lib)
4   (require 'color)
5
6   (map! :localleader
7     :map csv-mode-map
8     "R" #' +csv-rainbow)
9
10  (defun +csv-rainbow (&optional separator)
11    (interactive (list (when current-prefix-arg (read-char "Separator: "))))
12    (font-lock-mode 1)
13    (let* ((separator (or separator ?\,))
14           (n (count-matches (string separator) (point-at-bol) (point-at-eol)))
15           (colors (cl-loop for i from 0 to 1.0 by (/ 2.0 n)
16                           collect (apply #'color-rgb-to-hex
17                                           (color-hsl-to-rgb i 0.3 0.5)))))
18      (cl-loop for i from 2 to n by 2
19                for c in colors
20                for r = (format "%c\\([~%c\\n]+%c\\)\\{d\\}" separator separator i)
21                do (font-lock-add-keywords nil `((,r (1 '(face (:foreground ,c))))))))
22
23  ;; provide CSV mode setup
24  ;; (add-hook 'csv-mode-hook (lambda () (+csv-rainbow)))

```

8.3 Vim

```

1 (package! vimrc-mode
2   :recipe (:host github
3           :repo "mcandre/vimrc-mode"))

```

```

1 (use-package! vimrc-mode
2   :mode "\\\\.vim\\(rc\\)?\\\\" )

```

8.4 ESS

View data frames better with

```
1 (package! ess-view)
```

8.5 GNU Octave

Files with the .m extension gets recognized automatically as Objective-C files. I've never used Objective-C before, so let's change it to be recognized as Octave/Matlab files.

```
1 (add-to-list 'auto-mode-alist '("\\.m\\'" . octave-mode))
```

8.6 ROS

8.6.1 Extensions

Add ROS specific file formats:

```
1 (add-to-list 'auto-mode-alist '("\\.rviz\\'" . conf-unix-mode))
2 (add-to-list 'auto-mode-alist '("\\.urdf\\'" . xml-mode))
3 (add-to-list 'auto-mode-alist '("\\.xacro\\'" . xml-mode))
4 (add-to-list 'auto-mode-alist '("\\.launch\\'" . xml-mode))
5
6 ;; Use gdb-script-mode for msg and srv files
7 (add-to-list 'auto-mode-alist '("\\.msg\\'" . gdb-script-mode))
8 (add-to-list 'auto-mode-alist '("\\.srv\\'" . gdb-script-mode))
9 (add-to-list 'auto-mode-alist '("\\.action\\'" . gdb-script-mode))
```

8.6.2 ROS bags

Mode to view ROS .bag files. Taken from code-iai/ros_emacs_utils.

```
1 (when ROSBAG-P
2   (define-derived-mode rosbag-view-mode
3     fundamental-mode "Rosbag view mode"
4     "Major mode for viewing ROS bag files."
5     (let ((f (buffer-file-name)))
6       (let ((buffer-read-only nil))
7         (erase-buffer)
8         (message "Calling rosbag info")
9         (call-process "rosbag" nil (current-buffer) nil
10                      "info" f)
11         (set-buffer-modified-p nil))
12     (view-mode)
13     (set-visited-file-name nil t)))
14
15 ;; rosbag view mode
16 (add-to-list 'auto-mode-alist '("\\.bag$" . rosbag-view-mode)))
```

8.6.3 ros.el

I found this awesome `ros.el` package made by Max Beutelspacher, which facilitate working with ROS machines, supports ROS1 and ROS2, with local workspaces or remote ones (over Trump!).

```

1 ;; `ros.el' depends on `with-shell-interpreter' among other packages
2 ;; See: https://github.com/DerBeutlin/ros.el/blob/master/Cask
3 (package! with-shell-interpreter)
4 (package! ros
5   :recipe (:host github
6           :repo "DerBeutlin/ros.el"))

```

Now, we configure the ROS1/ROS2 workspaces to work on. But before that, we need to install some tools on the ROS machine, and build the workspace for the first time using `colcon build`, the repository contains example Docker files for Noetic and Foxy.

```

1 (use-package! ros
2   :init
3   (map! :leader
4         :prefix ("l" . "custom")
5         :desc "Hydra ROS" "r" #'hydra-ros-main/body)
6   :commands (hydra-ros-main/body ros-set-workspace)
7   :config
8   (setq ros-workspaces
9         (list (ros-dump-workspace
10               :tramp-prefix (format "/docker:%s@%s:" "ros" "ros-machine")
11               :workspace "~/ros_ws"
12               :extends '("/opt/ros/noetic/"))
13               (ros-dump-workspace
14                 :tramp-prefix (format "/ssh:%s@%s:" "swd_sk" "172.16.96.42")
15                 :workspace "~/ros_ws"
16                 :extends '("/opt/ros/noetic/"))
17                 (ros-dump-workspace
18                   :tramp-prefix (format "/ssh:%s@%s:" "swd_sk" "172.16.96.42")
19                   :workspace "~/ros2_ws"
20                   :extends '("/opt/ros/foxy/"))))))))

```

8.7 Scheme

```

1 (after! geiser
2   (setq geiser-default-implementation 'guile
3         geiser-chez-binary "chez-scheme")) ;; default is "scheme"

```

8.8 Embedded systems

8.8.1 Embed.el

Some embedded systems development tools.

TODO: Try to integrate embedded debuggers adapters with `dap-mode`:

- probe-rs-debugger
- stm32-emacs
- cortex-debug with potential integration with DAP
- esp-debug-adapter

```

1 (package! embed
2   :recipe (:host github
3           :repo "sjsch/embed-el"))

```

```

1 (use-package! embed
2   :commands (embed-openocd-start
3              embed-openocd-stop
4              embed-openocd-gdb
5              embed-openocd-flash)
6
7   :init
8   (map! :leader :prefix ("l" . "custom")
9         (:when (featurep! :tools debugger +lsp)
10              :prefix ("e" . "embedded")
11              :desc "Start OpenOCD"      "o" #'embed-openocd-start
12              :desc "Stop OpenOCD"      "O" #'embed-openocd-stop
13              :desc "OpenOCD GDB"       "g" #'embed-openocd-gdb
14              :desc "OpenOCD flash"     "f" #'embed-openocd-flash)))

```

8.8.2 Arduino

```

1 (package! arduino-mode
2   :recipe (:host github
3           :repo "bookest/arduino-mode"))

```

8.8.3 Bitbake (Yocto)

Add support for Yocto Project files.

```

1 (package! bitbake-modes
2   :recipe (:host bitbucket
3           :repo "olaniilsson/bitbake-modes"))

```

```

1 (use-package! bitbake-modes
2   :commands (wks-mode
3              mmm-mode
4              bb-sh-mode
5              bb-scc-mode
6              bitbake-mode
7              conf-bitbake-mode
8              bitbake-task-log-mode))

```

8.9 Debugging

8.9.1 DAP

I like to use `cpptools` over `webfreak.debug`. So I enable it after loading `dap-mode`. I like also to have a mode minimal UI. And I like to trigger `dap-hydra` when the program hits a break point, and automatically delete the session and close Hydra when DAP is terminated.

```

1 (unpin! dap-mode)

```

```

1 (after! dap-mode
2   (require 'dap-cpptools)
3
4   ;; More minimal UI
5   (setq dap-auto-configure-features '(locals tooltip)
6         dap-auto-show-output nil ;; Hide the annoying server output
7         lsp-enable-dap-auto-configure t)
8

```

```

9  ;; Automatically trigger dap-hydra when a program hits a breakpoint.
10 (add-hook 'dap-stopped-hook (lambda (arg) (call-interactively #'dap-hydra)))
11
12  ;; Automatically delete session and close dap-hydra when DAP is terminated.
13 (add-hook 'dap-terminated-hook
14   (lambda (arg)
15     (call-interactively #'dap-delete-session)
16     (dap-hydra/nil)))
17
18  ;; A workaround to correctly show breakpoints
19  ;; from: https://github.com/emacs-lsp/dap-mode/issues/374#issuecomment-1140399819
20 (add-hook! +dap-running-session-mode
21   (set-window-buffer nil (current-buffer))))

```

Doom store Doom Emacs stores session information persistently using the core `store` mechanism. However, relaunching a new session doesn't overwrite the last stored session, to do so, I define a helper function to clear data stored in the `" +debugger"` location. (see `+debugger--get-last-config` function.)

```

1 (defun +debugger/clear-last-session ()
2   "Clear the last stored session"
3   (interactive)
4   (doom-store-clear "+debugger"))
5
6 (map! :leader :prefix ("l" . "custom")
7   (:when (featurep! :tools debugger +lsp)
8     :prefix ("d" . "debugger")
9     :desc "Clear last DAP session" "c" #' +debugger/clear-last-session))

```

8.9.2 The Grand “Cathedral” Debugger

For C/C++, DAP mode is missing so much features. In my experience, both `cpptools` and `gdb` DAP interfaces aren't mature, it stops and disconnect while debugging, making it a double pain.

Additional commands There is no better than using pure GDB, it makes debugging extremely flexible. Let's define some missing GDB commands, add them to Hydra keys, and define some reverse debugging commands for usage with `rr` (which we can use by substituting `gdb` by `rr replay` when starting a debug session).

```

1 (after! realgud
2   (require 'hydra)
3
4   ;; Add some missing gdb/rr commands
5   (defun +realgud:cmd-start (arg)
6     "start = break main + run"
7     (interactive "p")
8     (realgud-command "start"))
9
10  (defun +realgud:cmd-reverse-next (arg)
11    "Reverse next"
12    (interactive "p")
13    (realgud-command "reverse-next"))
14
15  (defun +realgud:cmd-reverse-step (arg)
16    "Reverse step"
17    (interactive "p")
18    (realgud-command "reverse-step"))
19
20  (defun +realgud:cmd-reverse-continue (arg)
21    "Reverse continue"
22    (interactive "p")
23    (realgud-command "reverse-continue"))
24
25  (defun +realgud:cmd-reverse-finish (arg)

```

```

26 "Reverse finish"
27 (interactive "p")
28 (realgud-command "reverse-finish"))
29
30 ;; Define a hydra binding
31 (defhydra realgud-hydra (:color pink :hint nil :foreign-keys run)
32 "

65 (defun +debugger/realgud:gdb-hydra ()
66 "Run `realgud-hydra'."
67 (interactive)
68 (realgud-hydra/body))
69
70 (map! :leader :prefix ("l" . "custom")
71 (:when (featurep! :tools debugger)
72 :prefix ("d" . "debugger")
73 :desc "RealGUD hydra" "h" #' +debugger/realgud:gdb-hydra)))

```

RealGUD .dir-locals.el support I do a lot of development on C/C++ apps that gets data from command line arguments, which means I have to type my arguments manually after calling `realgud:gdb`, which is very annoying.

For DAP mode, there is a support for either `dap-debug-edit-template`, or `launch.json`. For RealGUD though, I didn't find any ready-to-use feature like this. So I define a parameter list named `+realgud:launch-plist`, which supports `:program` and `:args`. The first is a string of the program path, and the second is a list of string arguments to pass to the program.

```

1 ;; A variable which to be used in .dir-locals.el, formatted as a property list;
2 ;; '(:program "... " :args ("arg1" "arg2" ...))
3 ;; "${workspaceFolder}" => gets replaced with project workspace (from projectile)
4 ;; "${workspaceFolderBasename}" => gets replaced with project workspace's basename
5 (defvar +realgud:launch-plist nil)

```

This variable is set in a per-project basis thanks to `.dir-locals.el`, something like this:

```
1 ;; Example entry in .dir-locals.el
2 ((nil . ((+realgud:launch-plist . '(:program "${workspaceFolder}/build/bin/my_prog"
3                                     :args ("--in_file=${workspaceFolder}/some/file.csv"
4                                             "--out_file=/tmp/some_randome_file"
5                                             "-a")))))
```

The special variables `${workspaceFolder}` and `${workspaceFolderBasename}` are defined as in VS Code, the actual values are filled from `projectile-project-root`.

```
1 (defun +realgud:get-launch-debugger-args (&key program args)
2   (let ((debugger--args ""))
3     (when program
4       (setq debugger--args program))
5     (when args
6       (setq debugger--args (concat debugger--args " " (s-join " " args)))))
7   ;; Replace special variables
8   (let* ((ws--root (expand-file-name (or (projectile-project-root) ".")))
9          (ws--basename (file-name-nondirectory
10                          (if (s-ends-with-p "/" ws--root)
11                              (substring ws--root 0 -1)
12                              ws--root))))
13     (s-replace-all
14      (list (cons "${workspaceFolder}" ws--root)
15            (cons "${workspaceFolderBasename}" ws--basename))
16      debugger--args)))

```

8.9.3 GDB

Emacs GDB *a.k.a.* gdb-mi DAP mode is great, however, it is not mature for C/C++ debugging, it does not support some basic features like *Run until cursor*, *Show disassembled code*, etc. Emacs have builtin **gdb** support through **gdb-mi** and **gud**.

The **emacs-gdb** package overwrites the builtin **gdb-mi**, it is much faster (thanks to it's C module), and it defines some easy to use UI, with Visual Studio like keybindings.

```

1 (package! gdb-mi
2   :recipe (:host github
3           :repo "weirdNox/emacs-gdb"
4           :files ("*.el" "*.c" "*.h" "Makefile")))

```

```

1 (use-package! gdb-mi
2   :init
3   (fmakunbound 'gdb)
4   (fmakunbound 'gdb-enable-debug)
5
6   :config
7   (setq gdb-window-setup-function #'gdb--setup-windows ;; TODO: Customize this
8       gdb-ignore-gdbinit nil) ;; I use gdbinit to define some useful stuff
9   ;; History

```

Babel is really annoying when it comes to working with Scheme (via Geiser), it keeps asking about which Scheme implementation to use, I tried to set this as a local variable (using `)` and `.dir-locals.el`, but it didn't work. This hack should solve the problem now!

```

1 ;; stolen from https://github.com/yohan-pereira/.emacs#babel-config
2 (defun +org-confirm-babel-evaluate (lang body)
3   (not (string= lang "scheme"))) ;; Don't ask for scheme

Visual line & autofill By default, `visual-line-mode` is turned on, and `auto-fill-mode` off by a hook. However, this messes with tables in Org-mode, and other plain text files (e.g. markdown, \LaTeX) so I'll turn it off for this, and manually enable it for more specific modes as desired.

```

1 (remove-hook 'text-mode-hook #'visual-line-mode)
2 (add-hook 'text-mode-hook #'auto-fill-mode)

```

EVIL There also seem to be a few keybindings which use `hjkl`, but miss arrow key equivalents.

```

21
22    TABLE is the alist which should contain entries where the car is a string.
23    There should be two types of entries.
24
25    1. prefix descriptions like (\a\ "Description\")
26    This indicates that `a' is a prefix key for multi-letter selection, and
27    that there are entries following with keys like \ab\, \ax\...
28
29    2. Select-able members must have more than two elements, with the first
30    being the string of keys that lead to selecting it, and the second a
31    short description string of the item.
32
33    The command will then make a temporary buffer listing all entries
34    that can be selected with a single key, and all the single key
35    prefixes. When you press the key for a single-letter entry, it is selected.
36    When you press a prefix key, the commands (and maybe further prefixes)
37    under this key will be shown and offered for selection.
38
39    TITLE will be placed over the selection in the temporary buffer,
40    PROMPT will be used when prompting for a key. SPECIALS is an
41    alist with (\key\ "description\") entries. When one of these
42    is selected, only the bare key is returned."

```

Org Roam Capture template

Snippet Helpers

I often want to set `src-block` headers, and it's a pain to:

- type them out
- remember what the accepted values are
- oh, and specifying the same language again and again

We can solve this in three steps:

- having one-letter snippets, conditioned on `(point)` being within a src header
- creating a nice prompt showing accepted values and the current default
- pre-filling the `src-block` language with the last language used

For header args, the keys I'll use are:

- r for :results
- e for :exports
- v for :eval
- s for :session
- d for :dir

```

1 (defun +yas/org-src-header-p ()
2   "Determine whether `point' is within a src-block header or header-args."
3   (pcase (org-element-type (org-element-context))
4     ('src-block (< (point) ; before code part of the src-block
5                  (save-excursion (goto-char (org-element-property :begin (org-element-context)))
6                                (forward-line 1)
7                                (point))))
8     ('inline-src-block (< (point) ; before code part of the inline-src-block
9                          (save-excursion (goto-char (org-element-property :begin (org-element-context)))
10                                          (search-forward "{")
11                                          (point))))
12     ('keyword (string-match-p "~header-args" (org-element-property :value (org-element-context)))))

```

Now let's write a function we can reference in YASnippets to produce a nice interactive way to specify header arguments.

```

1 (defun +yas/org-prompt-header-arg (arg question values)
2   "Prompt the user to set ARG header property to one of VALUES with QUESTION.
3   The default value is identified and indicated. If either default is selected,
4   or no selection is made: nil is returned."
5   (let* ((src-block-p (not (looking-back "~#\+property:[ \t]+header-args:.*" (line-beginning-position))))
6         (default
7          (or
8           (cdr (assoc arg
9                     (if src-block-p
10                        (nth 2 (org-babel-get-src-block-info t))
11                        (org-babel-merge-params
12                          org-babel-default-header-args
13                          (let ((lang-headers
14                              (intern (concat "org-babel-default-header-args:"
15                                              (+yas/org-src-lang))))
16                                (when (boundp lang-headers) (eval lang-headers t))))))
17           default-value)
18         (setq values (mapcar
19                      (lambda (value)
20                        (if (string-match-p (regexp-quote value) default)
21                          (setq default-value
22                                (concat value " "
23                                          (propertyize "(default)" 'face 'font-lock-doc-face)))
24                        value))
25                      values))
26         (let ((selection (consult--read question values :default default-value)))
27           (unless (or (string-match-p "(default)$" selection)
28                       (string= "" selection))
29             selection))))
30

```

Finally, we fetch the language information for new source blocks.

Since we're getting this info, we might as well go a step further and also provide the ability to determine the most popular language in the buffer that doesn't have any `header-args` set for it (with `#+properties`).

```

1 (defun +yas/org-src-lang ()
2   "Try to find the current language of the src/header at `point'."
3   "Return nil otherwise."

25       (while (re-search-forward "[ \t]*#\\+property: +header-args" nil t)
26         (push (+yas/org-src-lang) header-langs)))
27
28     (setq src-langs
29           (mapcar #'car
30                   ;; sort alist by frequency (desc.)
31                   (sort
32                    ;; generate alist with form (value . frequency)
33                    (cl-loop for (n . m) in (seq-group-by #'identity src-langs)
34                          collect (cons n (length m)))
35                    (lambda (a b) (> (cdr a) (cdr b))))))
36
37   (car (cl-set-difference src-langs header-langs :test #'string=)))
38

```

Translate capital keywords to lower case Everyone used to use `#+CAPITAL` keywords. Then people realised that `#+lowercase` is actually both marginally easier and visually nicer, so now the capital version is just used in the manual.

Org is standardized on lower case. Uppercase is used in the manual as a poor man’s bold, and supported for historical reasons. — Nicolas Goaziou

```

1 (defun +org-syntax-convert-keyword-case-to-lower ()
2   "Convert all #+KEYWORDS to #+keywords."
3   (interactive)
4   (save-excursion
5     (goto-char (point-min))
6     (let ((count 0)
7           (case-fold-search nil))
8       (while (re-search-forward "[ \t]*#\\+[A-Z_]+" nil t)
9         (unless (s-matches-p "RESULTS" (match-string 0))
10          (replace-match (downcase (match-string 0)) t)
11          (setq count (1+ count))))
12     (message "Replaced %d occurrences" count))))

```

Org notifier Add support for `org-wild-notifier`.

```

1 (use-package! org-wild-notifier
2   :hook (org-load . org-wild-notifier-mode)
3   :config
4   (setq org-wild-notifier-alert-time '(60 30)))

```

9.2.3 Custom links

Sub-figures This defines a new link type `subfig` to enable exporting sub-figures to \LaTeX , taken from “Export subfigures to \LaTeX (and HTML)”.

```

1 (org-link-set-parameters
2   "subfig"
3   :follow (lambda (file) (find-file file))
4   :face '(:foreground "chocolate" :weight bold :underline t)

```

```

5 :display 'full
6 :export
7 (lambda (file desc backend)
8   (when (eq backend 'latex)
9     (if (string-match ">(\{.+\\})" desc)
10        (concat "\\begin{subfigure}[b]"
11                "\\caption{" (replace-regexp-in-string "\s+>(.+)" "" desc) "}"
12                "\\includegraphics" "[" (match-string 1 desc) "]" "{" file "}" "\\end{subfigure}")
13        (format "\\begin{subfigure}\\includegraphics{%s}\\end{subfigure}" desc file))))

```

Example of usage:

```

#+caption: Lorem ipsum dolor
#+attr_latex: :options \centering
#+begin_figure
[[subfig:img1.jpg][Caption of img1 >(width=.3\textwidth)]]

[[subfig:img2.jpg][Caption of img2 >(width=.3\textwidth)]]

[[subfig:img3.jpg][Caption of img3 >(width=.6\textwidth)]]
#+end_figure

```

L^AT_EX inline markup Needs to make a `?`, with this hack you can write `[[latex:textsc][Some text]]`.

```

1 (org-add-link-type
2   "latex" nil
3   (lambda (path desc format)
4     (cond
5       ((eq format 'html)
6        (format "<span class=\"%s\">%s</span>" path desc))
7       ((eq format 'latex)
8        (format "\\%s{%s}" path desc))))

```

9.2.4 Visuals

Here I try to do two things: improve the styling of the various documents, via font changes etc., and also propagate colours from the current theme.

Font display

Headings Let's make the title and the headings a bit bigger:

```

1 (custom-set-faces!
2   '(org-document-title :height 1.2))
3
4 (custom-set-faces!
5   '(outline-1 :weight extra-bold :height 1.25)
6   '(outline-2 :weight bold :height 1.15)
7   '(outline-3 :weight bold :height 1.12)
8   '(outline-4 :weight semi-bold :height 1.09)
9   '(outline-5 :weight semi-bold :height 1.06)
10  '(outline-6 :weight semi-bold :height 1.03)
11  '(outline-8 :weight semi-bold)
12  '(outline-9 :weight semi-bold))

```

Deadlines It seems reasonable to have deadlines in the error face when they're passed.

```
1 (setq org-agenda-deadline-faces
2   '( (1.001 . error)
3     (1.000 . org-warning)
4     (0.500 . org-upcoming-deadline)
5     (0.000 . org-upcoming-distant-deadline)))
```

Font styling We can then have quote blocks stand out a bit more by making them *italic*.

```
1 (setq org-fontify-quote-and-verse-blocks t)
```

While `org-hide-emphasis-markers` is very nice, it can sometimes make edits which occur at the border a bit more fiddley. We can improve this situation without sacrificing visual amenities with the `org-appear` package.

```
1 (use-package! org-appear
2   :hook (org-mode . org-appear-mode)
3   :config
4   (setq org-appear-autoemphasis t
5         org-appear-autosubmarkers t
6         org-appear-autolinks nil)
7   ;; for proper first-time setup, `org-appear--set-elements'
8   ;; needs to be run after other hooks have acted.
9   (run-at-time nil nil #'org-appear--set-elements))
```

```
1 (setq org-inline-src-prettify-results '(" " . " "))
2 doom-themes-org-fontify-special-tags nil)
```

L^AT_EX fragments

Prettier highlighting First off, we want those fragments to look good.

```

1 (setq org-highlight-latex-and-related '(native script entities))

```

However, by using `native` highlighting the `org-block` face is added, and that doesn't look too great — particularly when the fragments are previewed.

Ideally `org-src-font-lock-fontify-block` wouldn't add the `org-block` face, but we can avoid advising that entire function by just adding another face with `:inherit default` which will override the background color.

Inspecting `org-do-latex-and-related` shows that `"latex"` is the language argument passed, and so we can override the background as discussed above.

```
1 (require 'org-src)
2 (add-to-list 'org-src-block-faces '("latex" (:inherit default :extend t)))
```

Prettier rendering It's nice to customize the look of L^AT_EX fragments.

```
1 ;; (setq org-format-latex-header "\\documentclass{article}
2 ;; \\usepackage[svgnames]{xcolor}
3 ;; \\usepackage[T1]{fontenc}
4 ;; \\usepackage{booktabs}
5
6 ;; \\pagestyle{empty} % do not remove
7
8 ;; \\setlength{\\textwidth}{\\paperwidth}
9 ;; \\addtolength{\\textwidth}{-3cm}
10 ;; \\setlength{\\oddsidemargin}{1.5cm}
11 ;; \\addtolength{\\oddsidemargin}{-2.54cm}
12 ;; \\setlength{\\evensidemargin}{\\oddsidemargin}
13 ;; \\setlength{\\textheight}{\\paperheight}
14 ;; \\addtolength{\\textheight}{-\\headheight}
15 ;; \\addtolength{\\textheight}{-\\headsep}
16 ;; \\addtolength{\\textheight}{-\\footskip}
17 ;; \\addtolength{\\textheight}{-3cm}
18 ;; \\setlength{\\topmargin}{1.5cm}
19 ;; \\addtolength{\\topmargin}{-2.54cm}
20 ;; \\usepackage{arev}
21 ;; ")
```

Since we can, instead of making the background color match the `default` face, let's make it transparent.

```
1 (setq org-format-latex-options
2   (plist-put org-format-latex-options :background "Transparent"))
3
4 ;; Can be dvipng, dvisvgm, imagemagick
5 (setq org-preview-latex-default-process 'dvisvgm)
6
7 ;; Define a function to set the format latex scale (to be reused in hooks)
8 (defun +org-format-latex-set-scale (scale)
9   (setq org-format-latex-options (plist-put org-format-latex-options :scale scale)))
10
11 ;; Set the default scale
12 (+org-format-latex-set-scale 1.4)
13
14 ;; Increase scale in Zen mode
15 (when (featurep! :ui zen)
16   (add-hook! 'writeroom-mode-enable-hook (+org-format-latex-set-scale 2.0))
17   (add-hook! 'writeroom-mode-disable-hook (+org-format-latex-set-scale 1.4)))
```

Better equation numbering Numbered equations all have (1) as the number for fragments with vanilla `org-mode`. This code (from `scimax`) injects the correct numbers into the previews, so they look good.

This hack is not properly working right now!, it seems to work only with `align` blocks. **NEEDS INVESTIGATION.**

```
1 (defun +scimax-org-renumber-environment (orig-func &rest args)
2   "A function to inject numbers in LaTeX fragment previews."

9.2.6 Exporting

General settings By default, Org only exports the first three levels of headings as ... headings. This is rather unfortunate as my documents frequently stray far beyond three levels of depth. The two main formats I care about exporting to are L^AT_EX and HTML. When using an `article` class, L^AT_EX headlines go from `\section`, `\subsection`, `\subsubsection`, and `\paragraph` to `\subgraph` — *five* levels. HTML5 has six levels of headings (`<h1>` to `<h6>`), but first level Org headings get exported as `<h2>` elements - leaving *five* usable levels.

As such, it would seem to make sense to recognize the first *five* levels of Org headings when exporting.

```

1 (setq org-export-headline-levels 5) ;; I like nesting

```

I'm also going to make use of an item in `ox-extra` so that I can add an `:ignore:` tag to headings for the content to be kept, but the heading itself ignored (unlike `:noexport:` which ignored both heading and content). This is useful when I want to use headings to provide a structure for writing that doesn't appear in the final documents.

```

1 (require 'ox-extra)
2 (ox-extras-activate '(ignore-headlines))

```

Since I (roughly) track Org HEAD, it makes sense to include the git version in the creator string.

```

1 (setq org-export-creator-string
2   (format "Emacs %s (Org mode %s)" emacs-version (org-release)))

```

L^AT_EX export

Compiling By default, Org uses the classical `pdflatex × 3 + bibtex`. This simply won't do in our modern world. `latexmk + biber` (which is used automatically with `latexmk`) is a simply superior combination.

```

1 ;; `org-latex-compilers' contains a list of possible values ("pdflatex" "xelatex" "lualatex")
2 ;; for the `%latex' argument.
3 (setq org-latex-pdf-process '("latexmk -shell-escape -pdf -quiet -f -%latex -interaction=nonstopmode
  ↪ -output-directory=%o %f"))

```

```

1 ;; Add 'svg' package to display SVG pictures (uses inkscape, imagemagik and ghostscript)
2 ;; (add-to-list 'org-latex-packages-alist '("" "svg"))
3 ;; (add-to-list 'org-latex-packages-alist '("" "fontspec")) ;; for xelatex
4 ;; (add-to-list 'org-latex-packages-alist '("utf8" "inputenc"))

```

Org L^AT_EX packages

Export PDFs with syntax highlighting This is for code syntax highlighting in export. You need to use `-shell-escape` with latex, and install the `python-pygments` package.

```

Class templates

Export multi-files Org documents Let's say we have a multi-files document, with `main.org` as the entry point. Supposing a document with a structure like this:

Files `intro.org`, `chap1.org`, ... are included in `main.org` using the Org command `.` In such a setup, we will spend most of our time writing in a chapter files, and not the `main.org`, where when want to export the document, we would need to open the top-level file `main.org` before exporting.

A solution to this is **to admit the following convention**:

If a file named `main.org` is present beside any other Org file, it should be considered as the entry

Figure 1: Example of a multi-files document structure

point; and whenever we export to PDF (from any of the Org files like: `intro.org`, `chap1.org`, ...), we automatically jump to the `main.org`, and run the export there.

This can be achieved by adding an Emacs-Lisp *advice* around the `(org-latex-export-to-pdf)` to switch to `main.org` (if it exists) before running the export.

```

1 (advice-add 'org-latex-export-to-pdf :around
2   (lambda (orig-fn &rest orig-args)
3     (message "PDF exported to: %s."
4       (if (file-exists-p (expand-file-name "main.org"))
5         (with-current-buffer (find-file-noselect "main.org")
6           (apply orig-fn orig-args))
7         (apply orig-fn orig-args))))))

```

Hugo Update files with last modified date, when `#+lastmod:` is available

```

1 (setq time-stamp-active t
2   time-stamp-start "#\\+lastmod: [ \\t]*"
3   time-stamp-end "$"
4   time-stamp-format "%04Y-%02m-%02d")
5
6 (add-hook 'before-save-hook 'time-stamp nil)

```

9.3 Text editing

9.3.1 Plain text

It's nice to see ANSI color codes displayed. However, until Emacs 28 it's not possible to do this without modifying the buffer, so let's condition this block on that.

```

1 (after! text-mode
2   (add-hook! 'text-mode-hook
3     (unless (derived-mode-p 'org-mode)
4       ;; Apply ANSI color codes
5       (with-silent-modifications
6         (ansi-color-apply-on-region (point-min) (point-max) t))))))

```

9.3.2 Academic phrases

When writing your academic paper, you might get stuck trying to find the right phrase that captures your intention. This package tries to alleviate that problem by presenting you with a list of phrases organized by the topic or by the paper section that you are writing. This package has around 600 phrases so far.

This is based on the book titled “English for Writing Research - Papers Useful Phrases”.

```
1 (use-package! academic-phrases
2   :commands (academic-phrases
3             academic-phrases-by-section))
```

9.3.3 Quarto

Integration of Quarto in Emacs.

```
1 (package! quarto-mode)
```

```
1 (use-package! quarto-mode
2   :when QUARTO-P)
```

9.3.4 French apostrophes

```
1 (defun +helper--in-buffer-replace (old new)
2   "Replace OLD with NEW in the current buffer."
3   (save-excursion
4     (goto-char (point-min))
5     (let ((case-fold-search nil)
6           (cnt 0))
7       (while (re-search-forward old nil t)
8         (replace-match new)
9         (setq cnt (1+ cnt)))
10      cnt)))
11
12 (defun +helper-clear-frenchy-punctuations ()
13   "Replace french apostrophes (') by regular quotes (')."
14   (interactive)
15   (let ((chars '("(" " " . "")) (',' " " . "")))
16     (cnt 0))
17   (dolist (pair chars)
18     (setq cnt (+ cnt (+helper--in-buffer-replace (car pair) (cdr pair)))))
19   (message "Replaced %d matche(s)." cnt)))
```

9.3.5 Yanking multi-lines paragraphs

```
1 (defun +helper-paragraphized-yank ()
2   "Copy, then remove newlines and Org styling (/*_~)."
3   (interactive)
4   (copy-region-as-kill nil nil t)
5   (with-temp-buffer
6     (yank)
7     ;; Remove newlines, and Org styling (/*_~)
8     (goto-char (point-min))
9     (let ((case-fold-search nil))
10      (while (re-search-forward "[\n/*_~]" nil t)
11        (replace-match (if (s-matches-p (match-string 0) "\n" " " "")) t)))
12      (kill-region (point-min) (point-max))))
13
14 (map! :localleader
15       :map (org-mode-map markdown-mode-map latex-mode-map text-mode-map)
16       :desc "Paragraphized yank" "y" #' +helper-paragraphized-yank)
```

10 System configuration

10.1 Mime types

10.1.1 Org mode files

Org mode isn't recognized as its own mime type by default, but that can easily be changed with the following file. For system-wide changes try `/usr/share/mime/packages/org.xml`.

```
1 <mime-info xmlns='http://www.freedesktop.org/standards/shared-mime-info'>
2   <mime-type type="text/org">
3     <comment>Emacs Org-mode File</comment>
4     <glob pattern="*.org"/>
5     <alias type="text/org"/>
6   </mime-type>
7 </mime-info>
```

What's nice is that Papirus now has an icon for `text/org`. One simply needs to refresh their mime database:

```
1 update-mime-database ~/.local/share/mime
```

Then set Emacs as the default editor:

```
1 xdg-mime default emacs-client.desktop text/org
```

10.1.2 Registering `org-protocol://`

The recommended method of registering a protocol is by registering a desktop application, which seems reasonable.

```
1 [Desktop Entry]
2 Name=Emacs Org-Protocol
3 Exec=emacsclient %u
4 Icon=/home/hacko/.doom.d/assets/org-mode.svg
5 Type=Application
6 Terminal=false
7 MimeType=x-scheme-handler/org-protocol
```

To associate `org-protocol://` links with the desktop file:

```
1 xdg-mime default org-protocol.desktop x-scheme-handler/org-protocol
```

10.1.3 Configuring Chrome/Brave

As specified in the official documentation, we would like to invoke the `org-protocol://` without confirmation. To do this, we need to add this system-wide configuration.

```
1 read -p "Do you want to set Chrome/Brave to show the 'Always open ...' checkbox, to be used with the
2 ↩ 'org-protocol://' registration? [Y | N]: " INSTALL_CONFIRM
3
4 if [[ "$INSTALL_CONFIRM" == "Y" ]]
5 then
6   sudo mkdir -p /etc/opt/chrome/policies/managed/
7
8   sudo tee /etc/opt/chrome/policies/managed/external_protocol_dialog.json > /dev/null <<'EOF'
9   {
10     "ExternalProtocolDialogShowAlwaysOpenCheckbox": true
11   }
12 EOF
```

```

12 sudo chmod 644 /etc/opt/chrome/policies/managed/external_protocol_dialog.json
13
14 fi

```

Then add a bookmarklet in your browser with this code:

```

1 javascript:location.href =
2   'org-protocol://roam-ref?template=r&ref='
3   + encodeURIComponent(location.href)
4   + '&title='
5   + encodeURIComponent(document.title)
6   + '&body='
7   + encodeURIComponent(window.getSelection())

```

10.2 Git

10.2.1 Git diffs

Based on this gist and this article.

```

1 *.tex diff=tex
2 *.bib diff=bibtex
3 *.{c,h,c++,h++,cc,hh,cpp,hpp} diff=cpp
4 *.m diff=matlab
5 *.py diff=python
6 *.rb diff=ruby
7 *.php diff=php
8 *.pl diff=perl
9 *.{html,xhtml} diff=html
10 *.f diff=fortran
11 *.{el,lisp,scm} diff=lisp
12 *.r diff=rstats
13 *.texi* diff=texinfo
14 *.org diff=org
15 *.rs diff=rust
16
17 *.odt diff=odt
18 *.odp diff=libreoffice
19 *.ods diff=libreoffice
20 *.doc diff=doc
21 *.xls diff=xls
22 *.ppt diff=ppt
23 *.docx diff=docx
24 *.xlsx diff=xlsx
25 *.pptx diff=pptx
26 *.rtf diff=rtf
27
28 *.{png,jpg,jpeg,gif} diff=exif
29
30 *.pdf diff=pdf
31 *.djvu diff=djvu
32 *.epub diff=pandoc
33 *.chm diff=tika
34 *.mhtml? diff=tika
35
36 *.{class,jar} diff=tika
37 *.{rar,7z,zip,apk} diff=tika

```

Then adding some regular expressions for it to ~/.config/git/config, with some tools to view diffs on binary files.

```

10.2.2 Apache Tika App wrapper

Apache Tika is a content detection and analysis framework. It detects and extracts metadata and text from over a thousand different file types. We will be using the Tika App in command-line mode to show some meaningful diff information for some binary files.

First, let's add a custom script to run **tika-app**:

```

1 #!/bin/sh
2 APACHE_TIKA_JAR="$HOME/.local/share/tika/tika-app.jar"
3
4 if [ -f "${APACHE_TIKA_JAR}" ]
5 then
6     exec java -Dfile.encoding=UTF-8 -jar "${APACHE_TIKA_JAR}" "$@" 2>/dev/null
7 else
8     echo "JAR file not found at ${APACHE_TIKA_JAR}"
9 fi

```

Add **tika**'s installation instructions to the **setup.sh** file.

```

1 update_apache_tika () {
2     TIKA_JAR_PATH="$HOME/.local/share/tika"
3
4     if [ ! -d "${TIKA_JAR_PATH}" ]
5     then
6         mkdir -p "${TIKA_JAR_PATH}"
7     fi
8
9     TIKA_BASE_URL=https://archive.apache.org/dist/tika/
10    TIKA_JAR_LINK="${TIKA_JAR_PATH}/tika-app.jar"
11
12    echo -n "Checking for new Apache Tika App version... "
13
14    # Get the latest version
15    TIKA_VERSION=$(
16        curl -s "${TIKA_BASE_URL}" | # Get the page

```

```

17 pandoc -f html -t plain | # Convert HTML page to plain text.
18 awk '/([0-9]+\.[0-9]+\.[0-9])\// {print substr($1, 0, length($1)-1)}' | # Get the versions directories (pattern:
   ↪ X.X.X/)
19 sort -rV | # Sort versions, the newest first
20 head -n 1 # Get the first (newest) version
21 )
22
23 if [ -z "${TIKA_VERSION}" ]
24 then
25     echo "Failed, check your internet connection."
26     exit 1
27 fi
28
29 echo "Lastest version is ${TIKA_VERSION}"
30
31 TIKA_JAR="${TIKA_JAR_PATH}/tika-app-${TIKA_VERSION}.jar"
32 TIKA_JAR_URL="${TIKA_BASE_URL}/${TIKA_VERSION}/tika-app-${TIKA_VERSION}.jar"
33
34 if [ ! -f "${TIKA_JAR}" ]
35 then
36     echo "New version available!"
37     read -p "Do you want to download Apache Tika App v${TIKA_VERSION}? [Y | N]: " INSTALL_CONFIRM
38     if [[ "$INSTALL_CONFIRM" == "Y" ]]
39     then
40         curl -o "${TIKA_JAR}" "${TIKA_JAR_URL}" && echo "Apache Tika App v${TIKA_VERSION} downloaded successfully"
41     fi
42 else
43     echo "Apache Tika App is up-to-date, version ${TIKA_VERSION} already downloaded to '${TIKA_JAR}'"
44 fi
45
46 # Check the existance of the symbolic link
47 if [ -L "${TIKA_JAR_LINK}" ]
48 then
49     unlink "${TIKA_JAR_LINK}"
50 fi
51
52 # Create a symbolic link to the installed version
53 ln -s "${TIKA_JAR}" "${TIKA_JAR_LINK}"
54 }
55
56 update_apache_tika;

```

When it detects that Tesseract is installed, Tika App will try to extract text from some file types. For some reason, it tries to use Tesseract with some compressed files like *.bz2, *.apk... etc. I would like to disable this feature by exporting an XML config file which will be used when launching the Tika App (using --config=tika-config.xml).

```

1 <?xml version="1.0" encoding="UTF-8"?>
2 <properties>
3   <parsers>
4     <parser class="org.apache.tika.parser.DefaultParser">
5       <parser-exclude class="org.apache.tika.parser.ocr.TesseractOCRParser"/>
6     </parser>
7   </parsers>
8 </properties>

```

10.3 Emacs' Systemd daemon

Let's define a Systemd service to launch Emacs server automatically.

```

1 [Unit]
2 Description=Emacs server daemon
3 Documentation=info:emacs man:emacs(1) https://gnu.org/software/emacs/
4
5 [Service]

```

```

6 Type=forking
7 ExecStart=sh -c 'gpg -q --no-tty --logger-file /dev/null --batch -d ~/.authinfo.gpg > \dev\null; emacs --daemon
↪ && emacsclient -c --eval "(delete-frame)'"
8 ExecStop=/usr/bin/emacsclient --no-wait --eval "(progn (setq kill-emacs-hook nil) (kill-emacs))"
9 Restart=on-failure
10
11 [Install]
12 WantedBy=default.target

```

Which is then enabled by:

```

1 systemctl --user enable emacs.service

```

For some reason if a frame isn't opened early in the initialization process, the daemon doesn't seem to like opening frames later — hence the `&& emacsclient` part of the `ExecStart` value.

NOTE: I'm calling `gpg` before `emacs --daemon` to get asked for my GPG passphrase early, as it prevents Emacs' daemon from starting when it is trying to decrypt `~/.authinfo.gpg`.

10.4 Emacs Client

10.4.1 Desktop integration

It can now be nice to use this as a 'default app' for opening files. If we add an appropriate desktop entry, and enable it in the desktop environment.

```

1 [Desktop Entry]
2 Name=Emacs (Client)
3 GenericName=Text Editor
4 Comment=A flexible platform for end-user applications
5 MimeType=text/english;text/plain;text/org;text/x-makefile;text/x-c++hdr;text/x-c++src;text/x-chdr;text/x-csrc;t
↪ ext/x-java;text/x-moc;text/x-pascal;text/x-tcl;text/x-tex;application/x-shellscript;text/x-c;text/x-c++;
6 Exec=emacsclient -create-frame --frame-parameters="(fullscreen . maximized)"
↪ --alternate-editor="/usr/bin/emacs" --no-wait %F
7 Icon=emacs
8 Type=Application
9 Terminal=false
10 Categories=TextEditor;Utility;
11 StartupWMClass=Emacs
12 Keywords=Text;Editor;
13 X-KDE-StartupNotify=false

```

10.4.2 Command-line wrapper

A wrapper around `emacsclient`:

- Accepting `stdin` by putting it in a temporary file and immediately opening it.
- Guessing that the `tty` is a good idea when `$DISPLAY` is unset (relevant with SSH sessions, among other things).
- With a whiff of 24-bit color support, sets `TERM` variable to a `terminfo` that (probably) announces 24-bit color support.
- Changes GUI `emacsclient` instances to be non-blocking by default (`--no-wait`), and instead take a flag to suppress this behavior (`-w`).

I would use `sh`, but using arrays for argument manipulation is just too convenient, so I'll raise the requirement to `bash`. Since arrays are the only 'extra' compared to `sh`, other shells like `ksh` etc. should work too.

```

1  #!/usr/bin/env bash
2  force_tty=false
3  force_wait=false
4  stdin_mode=""
5
6  args=()
7
8  usage () {
9      echo -e "Usage: e [-t] [-m MODE] [OPTIONS] FILE [-]"
10
11     Emacs client convenience wrapper.
12
13     Options:
14     -h, --help           Show this message
15     -t, -nw, --tty       Force terminal mode
16     -w, --wait           Don't supply --no-wait to graphical emacsclient
17     -                     Take stdin (when last argument)
18     -m MODE, --mode MODE Mode to open stdin with
19     -mm, --maximized     Start Emacs client in maximized window
20
21     Run emacsclient --help to see help for the emacsclient."
22 }
23
24 while :
25 do
26     case "$1" in
27         -t | -nw | --tty)
28             force_tty=true
29             shift ;;
30         -w | --wait)
31             force_wait=true
32             shift ;;
33         -m | --mode)
34             stdin_mode=" ($2-mode)"
35             shift 2 ;;
36         -mm | --maximized)
37             args+=("--frame-parameters='(fullscreen . maximized)")
38             shift ;;
39         -h | --help)
40             usage
41             exit 0 ;;
42         --*=*)
43             set -- "$@" "${1%*=*}" "${1#*=}"
44             shift ;;
45         *)
46             [ "$#" = 0 ] && break
47             args+=("$1")
48             shift ;;
49     esac
50 done
51
52 if [ ! "${#args[*]}" = 0 ] && [ "${args[-1]}" = "-" ]
53 then
54     unset 'args[-1]'
55     TMP="$(mktemp /tmp/emacsstdin-XXX)"
56     cat > "$TMP"
57     args+=((--eval "(let ((b (generate-new-buffer \"*stdin*\"))) (switch-to-buffer b) (insert-file-contents
58 ↪ \" $TMP\") (delete-file \"$TMP\")${stdin_mode})))"
59 fi
60
61 if [ -z "$DISPLAY" ] || $force_tty
62 then
63     # detect terminals with sneaky 24-bit support
64     if { [ "$COLORTERM" = truecolor ] || [ "$COLORTERM" = 24bit ]; } \
65     && [ "$(tput colors 2>/dev/null)" -lt 257 ]
66 then
67     if echo "$TERM" | grep -q "^\\w\\+-[0-9]"
68     then
69         termstub="${TERM%*-*}"
70     else

```

```

70     termstub="${TERM#*-}"
71     fi
72
73     if infocmp "$termstub-direct" >/dev/null 2>&1
74     then
75         TERM="$termstub-direct"
76     else
77         TERM="xterm-direct"
78     fi # should be fairly safe
79     fi
80
81     emacsclient --tty -create-frame --alternate-editor="/usr/bin/emacs" "${args[@]}"
82 else
83     if ! $force_wait
84     then
85         args+=(--no-wait)
86     fi
87
88     emacsclient -create-frame --alternate-editor="/usr/bin/emacs" "${args[@]}"
89 fi

```

Useful aliases Now, to set an alias to use `e` with `magit`, and then for maximum laziness we can set aliases for the terminal-forced variants.

```

1  # Aliases to run emacs+magit
2  alias magit='e --eval "(progn (magit-status) (delete-other-windows))"'
3  alias magitt='e -t --eval "(progn (magit-status) (delete-other-windows))"'
4
5  # Aliases to run emacs+mu4e
6  alias emu='e --eval "(progn (=mu4e) (delete-other-windows))"'
7  alias emut='e -t --eval "(progn (=mu4e) (delete-other-windows))"'

```

And this to launch Emacs in terminal mode `et`, I use this as a default `$EDITOR`

```

1  #!/usr/bin/env bash
2  e -t "$@"

```

And `ev` for use with `$VISUAL`:

```

1  #!/usr/bin/env bash
2  e -w "$@"

```

```

1  export EDITOR="$HOME/.local/bin/et"
2  # export VISUAL="$HOME/.local/bin/ev"

```

10.5 AppImage

Install/update the `appimageupdatetool.AppImage` tool:

```

1  update_appimageupdatetool () {
2      TOOL_NAME=appimageupdatetool
3      MACHINE_ARCH=$(uname -m)
4      APPIMAGE_UPDATE_TOOL_PATH="$HOME/.local/bin/${TOOL_NAME}"
5      APPIMAGE_UPDATE_TOOL_URL="https://github.com/AppImage/AppImageUpdate/releases/download/continuous/${TOOL_NAME}_
6      ↪ -${MACHINE_ARCH}.AppImage"
7
7      if [ -f "${APPIMAGE_UPDATE_TOOL_PATH}" ] && "${APPIMAGE_UPDATE_TOOL_PATH}" -j "${APPIMAGE_UPDATE_TOOL_PATH}"
8      ↪ 2&>/dev/null
8      then

```

```

9     echo "${TOOL_NAME} already up to date"
10 else
11     if [ -f "${APPIMAGE_UPDATE_TOOL_PATH}" ]
12     then
13         echo "Update available, downloading latest ${MACHINE_ARCH} version to ${APPIMAGE_UPDATE_TOOL_PATH}"
14         mv "${APPIMAGE_UPDATE_TOOL_PATH}" "${APPIMAGE_UPDATE_TOOL_PATH}.backup"
15     else
16         echo "${TOOL_NAME} not found, downloading latest ${MACHINE_ARCH} version to ${APPIMAGE_UPDATE_TOOL_PATH}"
17     fi
18     wget -O "${APPIMAGE_UPDATE_TOOL_PATH}" "${APPIMAGE_UPDATE_TOOL_URL}" && # 2&>/dev/null
19     echo "Downloaded ${TOOL_NAME}-${MACHINE_ARCH}.AppImage" &&
20     [ -f "${APPIMAGE_UPDATE_TOOL_PATH}.backup" ] &&
21     rm "${APPIMAGE_UPDATE_TOOL_PATH}.backup"
22     chmod a+x "${APPIMAGE_UPDATE_TOOL_PATH}"
23 fi
24 }
25
26 update_appimageupdatetool;

```

10.6 Oh-my-Zsh

10.6.1 Path

Path to your oh-my-zsh installation.

```
1 export ZSH="$HOME/.oh-my-zsh"
```

10.6.2 Themes and customization:

Set name of the theme to load, if set to "random", it will load a random theme each time oh-my-zsh is loaded, in which case, to know which specific one was loaded, run: `echo $RANDOM_THEME` See github.com/ohmyzsh/ohmyzsh/wiki/Themes.

```

1 # Typewritten customizations
2 TYPEWRITTEN_RELATIVE_PATH="adaptive"
3 TYPEWRITTEN_CURSOR="underscore"
4
5 ZSH_THEME="typewritten/typewritten"
6
7 # Set list of themes to pick from when loading at random
8 # Setting this variable when ZSH_THEME=random will cause zsh to load
9 # a theme from this variable instead of looking in $ZSH/themes/
10 # If set to an empty array, this variable will have no effect.
11 # ZSH_THEME_RANDOM_CANDIDATES=( "robbyrussell" "agnoster" )

```

10.6.3 Behavior

```

1 # Uncomment the following line to use case-sensitive completion.
2 # CASE_SENSITIVE="true"
3
4 # Uncomment the following line to use hyphen-insensitive completion.
5 # Case-sensitive completion must be off. _ and - will be interchangeable.
6 # HYPHEN_INSENSITIVE="true"
7
8 # Uncomment the following line to disable bi-weekly auto-update checks.
9 # DISABLE_AUTO_UPDATE="true"
10
11 # Uncomment the following line to automatically update without prompting.
12 DISABLE_UPDATE_PROMPT="true"
13

```

```

14 # Uncomment the following line to change how often to auto-update (in days).
15 export UPDATE_ZSH_DAYS=3
16
17 # Uncomment the following line if pasting URLs and other text is messed up.
18 # DISABLE_MAGIC_FUNCTIONS="true"
19
20 # Uncomment the following line to disable colors in ls.
21 # DISABLE_LS_COLORS="true"
22
23 # Uncomment the following line to disable auto-setting terminal title.
24 # DISABLE_AUTO_TITLE="true"
25
26 # Uncomment the following line to enable command auto-correction.
27 # ENABLE_CORRECTION="true"
28
29 # Uncomment the following line to display red dots whilst waiting for completion.
30 # COMPLETION_WAITING_DOTS="true"
31
32 # Uncomment the following line if you want to disable marking untracked files
33 # under VCS as dirty. This makes repository status check for large repositories
34 # much, much faster.
35 # DISABLE_UNTRACKED_FILES_DIRTY="true"
36
37 # Uncomment the following line if you want to change the command execution time
38 # stamp shown in the history command output.
39 # You can set one of the optional three formats:
40 # "mm/dd/yyyy"|"dd.mm.yyyy"|"yyyy-mm-dd"
41 # or set a custom format using the strftime function format specifications,
42 # see 'man strftime' for details.
43 # HIST_STAMPS="mm/dd/yyyy"

```

10.6.4 Plugins

```

1 # Would you like to use another custom folder than $ZSH/custom?
2 ZSH_CUSTOM=$HOME/.config/my_ohmyzsh_customizations
3
4 # Which plugins would you like to load?
5 # Standard plugins can be found in $ZSH/plugins/
6 # Custom plugins may be added to $ZSH_CUSTOM/plugins/
7 # Example format: plugins=(rails git textmate ruby lighthouse)
8 # Add wisely, as too many plugins slow down shell startup.
9 plugins=(
10     zsh-autosuggestions
11     zsh-navigation-tools
12     zsh-interactive-cd
13     archlinux
14     ssh-agent
15     sudo
16     docker
17     systemd
18     tmux
19     python
20     pip
21     rust
22     repo
23     git
24     cp
25     rsync
26     ripgrep
27     fzf
28     fd
29     z
30 )

```

10.6.5 Bootstrap Oh-my-Zsh

```
1 source $ZSH/oh-my-zsh.sh
```

10.6.6 Aliases

```
1 # Aliases
2 alias zshconfig="vim ~/.zshrc"
3 alias ohmyzsh="ranger $ZSH"
```

10.7 Zsh user configuration

10.7.1 pbcopy and pbpaste

I like to define MacOS-like commands (`pbcopy` and `pbpaste`) to copy and paste in terminal (from `stdin`, to `stdout`). The `pbcopy` and `pbpaste` are defined using either `xclip` or `xsel`, you would need to install these tools, otherwise we wouldn't define the aliases.

```
1 # Define aliases to 'pbcopy' and 'pbpaste'
2 if command -v xclip &> /dev/null
3 then
4     # Define aliases using xclip
5     alias pbcopy='xclip -selection clipboard'
6     alias pbpaste='xclip -selection clipboard -o'
7 elif command -v xsel &> /dev/null
8 then
9     # Define aliases using xsel
10    alias pbcopy='xsel --clipboard --input'
11    alias pbpaste='xsel --clipboard --output'
12 fi
```

10.7.2 netpaste

Define a `netpaste` command to paste to a Pastebin server.

```
1 alias netpaste='curl -F file=@- 0x0.st' # OR 'curl -F f:1=<- ix.io '
```

10.7.3 Sudo GUI!

And then define `gsuon` and `gsuoff` aliases to run graphical apps from terminal with root permissions, this requires `xhost`.

```
1 # To run GUI apps from terminal with root permissions
2 if command -v xhost &> /dev/null
3 then
4     alias gsuon='xhost si:localuser:root'
5     alias gsuoff='xhost -si:localuser:root'
6 fi
```

10.7.4 Neovim

Use Neovim instead of VIM to provide `vi` and `vim` commands.

```

1 # NeoVim
2 if command -v nvim &> /dev/null
3 then
4     alias vim="nvim"
5     alias vi="nvim"
6 fi

```

10.7.5 ESP-IDF

Add some aliases to work with the ESP-IDF framework.

```

1 if [ -d "$HOME/Softwares/src/esp-idf/" ]
2 then
3     alias esp-prepare-env='source $HOME/Softwares/src/esp-idf/export.sh'
4     alias esp-update='echo "Updating ESP-IDF framework..." && cd $HOME/src/esp-idf && git pull --all && echo
5     ↪ "Updated successfully"'
6 else
7     alias esp-prepare-env='echo "esp-idf repo not found. You can clone the esp-idf repo using git clone
8     ↪ https://github.com/espressif/esp-idf.git"'
9     alias esp-update=esp-prepare-env
10 fi

```

10.7.6 CLI wttr.in client

Define an alias to get weather information for my city:

```

1 export WTTRIN_CITY=Orsay
2
3 alias wttrin='curl wttr.in/$WTTRIN_CITY'
4 alias wttrin2='curl v2.wttr.in/$WTTRIN_CITY'

```

10.7.7 Minicom

Enable Meta key and colors in minicom:

```

1 export MINICOM='-m -c on'

```

10.7.8 Rust

Define Rust sources path, and add packages installed from cargo to the PATH.

```

1 export RUST_SRC_PATH=$HOME/.rustup/toolchains/stable-x86_64-unknown-linux-gnu/lib/rustlib/src/rust/src/
2 export PATH=$PATH:$HOME/.cargo/bin

```

I'm using the AUR package `clang-format-static-bin`, which provide multiple versions of Clang-format, I use it with some work projects requiring a specific version of Clang-format.

10.7.9 Clang-format

```

1 export PATH=$PATH:/opt/clang-format-static

```

10.7.10 CMake

Add my manually installed libraries to CMake and PATH.

```
1 export CMAKE_PREFIX_PATH=$HOME/Softwares/src/install
2 export PATH=$PATH:$HOME/Softwares/src/install/bin
```

10.7.11 Node

Set NPM installation path to local:

```
1 NPM_PACKAGES="${HOME}/.npm-packages"
2
3 # Export NPM bin path
4 export PATH="$PATH:$NPM_PACKAGES/bin"
5
6 # Preserve MANPATH if you already defined it somewhere in your config.
7 # Otherwise, fall back to `manpath` so we can inherit from `/etc/manpath`.
8 export MANPATH="${MANPATH-$(manpath)}:$NPM_PACKAGES/share/man"
9
10 # Tell Node about these packages
11 export NODE_PATH="$NPM_PACKAGES/lib/node_modules:$NODE_PATH"
```

Tell NPM to use this directory for its global package installs by adding this in `~/.npmrc`:

```
1 prefix = ~/.npm-packages
```

Some useful stuff (fzf, opam, Doom Emacs...)

10.7.12 tmux

I like to use `tmux` by default, even on my local sessions, I like to start a `tmux` in a `default` session on the first time I launch a terminal, and then, attach any other terminal to this default session:

```
1 # If not running inside Emacs (via vterm/eshell...)
2 if [ -z $INSIDE_EMACS ]
3 then
4     if command -v tmux && /dev/null && [ -z "$TMUX" ]
5     then
6         tmux attach -t default || tmux new -s default
7     fi
8 fi
```

10.7.13 Other stuff

```
1 # You may need to manually set your language environment
2 # export LANG=en_US.UTF-8
3
4 # Preferred editor for local and remote sessions
5 # if [[ -n $SSH_CONNECTION ]]; then
6 #     export EDITOR='vim'
7 # else
8 #     export EDITOR='mvim'
9 # fi
10
11 # Compilation flags
12 # export ARCHFLAGS="-arch x86_64"
13
14 # FZF
15 [ -f ~/.fzf.zsh ] && source ~/.fzf.zsh
```

```

16
17 # OPAM configuration
18 [[ ! -r $HOME/.opam/opam-init/init.zsh ]] || source $HOME/.opam/opam-init/init.zsh > /dev/null 2> /dev/null
19
20 # Add ~/.config/emacs/bin to path (for DOOM Emacs stuff)
21 export PATH=$PATH:$HOME/.config/emacs/bin

```

Define some environment variables.

```

1 export DS_DIR=~/.PhD/datasets-no/experiment_images/
2 export DSO_BIN_DIR=~/.PhD/workspace-no/vo/orig/dso/build/release/bin
3 export DSO_RES_DIR=~/.PhD/workspace-no/vo/orig/dso_results

```

Load my bitwarden-cli session, exported to BW_SESSION.

```

1 source ~/.bitwarden-session

```

10.8 Rust format

For Rust code base, the file `$HOME/.rustfmt.toml` contains the global format settings, I like to set it to:

```

1 # Rust edition 2018
2 edition = "2018"
3
4 # Use Unix style newlines, with 2 spaces tabulation.
5 newline_style = "Unix"
6 tab_spaces = 2
7 hard_tabs = false
8
9 # Make one line functions in a single line
10 fn_single_line = true
11
12 # Format strings
13 format_strings = true
14
15 # Increase the max line width
16 max_width = 120
17
18 # Merge nested imports
19 merge_imports = true
20
21 # Enum and Struct alignment
22 enum_discrim_align_threshold = 20
23 struct_field_align_threshold = 20
24
25 # Reorder impl items: type > const > macros > methods.
26 reorder_impl_items = true
27
28 # Comments and documentation formating
29 wrap_comments = true
30 normalize_comments = true
31 normalize_doc_attributes = true
32 format_code_in_doc_comments = true
33 report_fixme = "Always"
34 todo = "Always"

```

10.9 eCryptfs

10.9.1 Unlock and mount script

```

1  #!/bin/sh -e
2  # This script mounts a user's confidential private folder
3  #
4  # Original by Michael Halcrow, IBM
5  # Extracted to a stand-alone script by Dustin Kirkland <kirkland@ubuntu.com>
6  # Modified by: Abdelhak Bougouffa <abougouffa@fedoraproject.org>
7  #
8  # This script:
9  # * interactively prompts for a user's wrapping passphrase (defaults to their
10 #   login passphrase)
11 # * checks it for validity
12 # * unwraps a users mount passphrase with their supplied wrapping passphrase
13 # * inserts the mount passphrase into the keyring
14 # * and mounts a user's encrypted private folder
15
16 PRIVATE_DIR="Private"
17 PW_ATTEMPTS=3
18 MESSAGE=`gettext "Enter your login passphrase:"`
19
20 if [ -f $HOME/.ecryptfs/wrapping-independent ]
21 then
22     # use a wrapping passphrase different from the login passphrase
23     MESSAGE=`gettext "Enter your wrapping passphrase:"`
24 fi
25
26 WRAPPED_PASSPHRASE_FILE="$HOME/.ecryptfs/wrapped-passphrase"
27 MOUNT_PASSPHRASE_SIG_FILE="$HOME/.ecryptfs/$PRIVATE_DIR.sig"
28
29 # First, silently try to perform the mount, which would succeed if the appropriate
30 # key is available in the keyring
31 if /sbin/mount.ecryptfs_private >/dev/null 2>&1
32 then
33     exit 0
34 fi
35
36 # Otherwise, interactively prompt for the user's password
37 if [ -f "$WRAPPED_PASSPHRASE_FILE" -a -f "$MOUNT_PASSPHRASE_SIG_FILE" ]
38 then
39     tries=0
40
41     while [ $tries -lt $PW_ATTEMPTS ]
42     do
43         LOGINPASS=`zenity --password --title "eCryptFS: $MESSAGE"`
44         if [ $(wc -l < "$MOUNT_PASSPHRASE_SIG_FILE") = "1" ]
45         then
46             # No filename encryption; only insert fek
47             if printf "%s\0" "$LOGINPASS" | ecryptfs-unwrap-passphrase "$WRAPPED_PASSPHRASE_FILE" - |
48             ↪ ecryptfs-add-passphrase -
49             then
50                 break
51             else
52                 zenity --error --title "eCryptfs" --text "Error: Your passphrase is incorrect"
53                 tries=$((tries + 1))
54                 continue
55             fi
56         else
57             if printf "%s\0" "$LOGINPASS" | ecryptfs-insert-wrapped-passphrase-into-keyring
58             ↪ "$WRAPPED_PASSPHRASE_FILE" -
59             then
60                 break
61             else
62                 zenity --error --title "eCryptfs" --text "Error: Your passphrase is incorrect"
63                 tries=$((tries + 1))
64                 continue
65             fi
66         fi
67     done
68
69     if [ $tries -ge $PW_ATTEMPTS ]
70     then

```

```

69     zenity --error --title "eCryptfs" --text "Too many incorrect password attempts, exiting"
70     exit 1
71 fi
72
73 /sbin/mount.ecryptfs_private
74 else
75     zenity --error --title "eCryptfs" --text "Encrypted private directory is not setup properly"
76     exit 1
77 fi
78
79 if grep -qs "$HOME/.Private $PWD ecryptfs " /proc/mounts 2>/dev/null; then
80     zenity --info --title "eCryptfs" --text "Your private directory has been mounted."
81 fi
82
83 dolphin "$HOME/Private"
84 exit 0

```

10.9.2 Desktop integration

```

1  [Desktop Entry]
2  Type=Application
3  Version=1.0
4  Name=eCryptfs Unlock Private Directory
5  Icon=unlock
6  Exec=/home/hacko/.ecryptfs/ecryptfs-mount-private-gui
7  Terminal=False

```

10.10 GDB

10.10.1 Early init

I like to disable the initial message (containing copyright info and other stuff), the right way to do this is either by starting `gdb` with `-q` option, or (since GDB v11 I think), by setting in `~/.gdbearlyinit`.

```

1  # GDB early init file
2  # Abdelhak Bougouffa (c) 2022
3
4  # Disable showing the initial message
5  set startup-quietly

```

10.10.2 Init

GDB loads `$HOME/.gdbinit` at startup, I like to define some default options in this file, this is a WIP, but it won't evolve too much, as it is recommended to keep the `.gdbinit` clean and simple. For the moment, it does just enable pretty printing, and defines the `c` and `n` commands to wrap `continue` and `next` with a post `refresh`, which is helpful with the annoying TUI when the program outputs to the stdout.

```

1  # GDB init file
2  # Abdelhak Bougouffa (c) 2022
3
4  # Save history
5  set history save on
6  set history filename ~/.gdb_history
7  set history remove-duplicates 2048
8
9  # Set pretty print
10 set print pretty on
11
12 # This fixes the annoying ncurses TUI glitches and saves typing C-l each time to refresh the screen
13 define cc

```

```

14   continue
15   refresh
16 end
17
18 define nn
19   next
20   refresh
21 end
22
23 guile
24 # The code from the next sub-section is will be included here
25 <<guile-check-for-script>>
26 end

```

WIP: Guile Scheme per-program or per-project script I often debug programs with a lot of arguments, I would like to be able to set the arguments and the binary file to be launched in a per-project basis. GDB support scripting in GDB Script, Python and Guile Scheme (currently I'm using the latter).

This bit of code checks if the `gdb.scm` file exists in the working directory, and if so, loads it.

A more flexible way is to provide per-program configuration files (to debug a program named `fft`, I like to create a script named `fft.scm` which gets loaded after the file). The following is a WIP, for the moment, I need to call my custom command `dbg-guile` when GDB done loading symbols from the file, otherwise, the used `(current-progspace)` returns an object with no filename. I need a mechanism to hook the `(dbg-find-and-load)` to GDB's load file functionality.

```

1  (use-modules (gdb))
2
3  (define (dbg-check-and-load filename)
4    (if (file-exists? filename)
5        (begin (display (string-append "Found a Guile Scheme script, loading file " filename "\n"))
6                (load filename)
7                #t)
8        #f))
9
10 (define (dbg-find-and-load)
11   ;; Get the program name from the current progspace
12   ;; For a program named "prog", the priorities goes like this:
13   ;; 1. a script with the same program name (prog.scm) exists in the current directory
14   ;; 2. a script with the same program name (prog.scm) exists in the program directory
15   ;; 3. a script with the name (gdb.scm) exists in the current directory
16   (let ((dbg-prg-filename (progspace-filename (current-progspace))))
17     (if dbg-prg-filename
18         (or (dbg-check-and-load (string-append (basename dbg-prg-filename) ".scm"))
19             (dbg-check-and-load (string-append dbg-prg-filename ".scm")))
20         (dbg-check-and-load "gdb.scm"))))
21
22 ;; Run by default
23 (dbg-find-and-load)
24
25 ;; Define a command to load binary specific config
26 (register-command! (make-command "dbg-guile" #:invoke (lambda (self arg from-tty) (dbg-find-and-load))))

```

In my project, I create a `gdb.scm` (or `<program-name>.scm`) with something like this:

```

1  ;; Load program executable
2  (execute "file ./build/bin/my_program")
3
4  ;; Load program arguments
5  (execute (string-join '("set args "
6                        "arg1"
7                        "--param=arg2")))

```

10.11 GnuPG

I add this to my `~/.gnupg/gpg-agent.conf`, to set the time-to-live to one day.

```
1 # Do not ask me about entered passwords for 24h (during the same session)
2 default-cache-ttl 86400
3 max-cache-ttl 86400
4 pinentry-program /usr/bin/pinentry-qt
```

10.12 Packages

I like to use the BMC class, however, I do not like to manually install stuff in system directories, so I made an Arch Linux AUR package `bmc-git` for it.

I do use the `metropolis` theme for Beamer presentations, so I'm maintaining a package of it in the AUR too.

```
1 check_and_install_pkg () {
2     PKG_NAME="$1"
3     if ! pacman -Qiq ${PKG_NAME} &> /dev/null
4     then
5         echo "Package ${PKG_NAME} is missing, installing it using yay"
6         yay -S ${PKG_NAME}
7     fi
8 }
9
10 check_and_install_pkg bmc-git
11 check_and_install_pkg beamer-theme-metropolis
```

10.13 KDE Plasma

On KDE, there is a good support for HiDPI displays, however, I faced annoying small icons in some contexts (for example, a right click on desktop). This can be fixed by setting `PLASMA_USE_QT_SCALING=1` before starting KDE Plasma. KDE sources the files with `.sh` extension found on `~/.config/plasma-workspace/env`, so let's create ours.

```
1 export PLASMA_USE_QT_SCALING=1
```
