Doom Emacs Configuration

Emacs configuration for work and life!

Abdelhak Bougouffa*

1 This repository

This repository (abougouffa/dotfiles) contains my configuration files for **Zsh**, **Emacs**, **Vim**, **Alacritty** and other Linux related stuff.

If you want to reuse some of these configurations, you will need to modify some directories and add some user specific information (usernames, passwords...)

This is the main configuration file .doom.d/config.org, (available also as a PDF file), it contains the literal configuration for Doom Emacs, and I use it to generate some other user configuration files (define aliases, environment variables, user tools, Git configuration...).

1.1 How to install 2 INTRO

1.1 How to install

Since commit 55c92810, I'm using **chezmoi** to manage my Dotfiles.

Now the Dotfiles can be installed using the following command; however, I don't recommend installing all of my dotfiles, try instead to adapt them or to copy some interesting chunks.

```
sudo pacman -S chezmoi
chezmoi init --apply abougouffa
```

1.2 Emacs stuff

To use my Doom Emacs configuration, you need first to install Doom Emacs to ~/.config/emacs or .emacs.d:

```
git clone https://github.com/doomemacs/doomemacs.git ~/.config/emacs

-/.config/emacs/bin/doom install
```

Until 12b3d20e, I was using Chemacs2 to manage multiple Emacs profiles. Since I'm using only Doom Emacs and Doom recently introduced a new feature to bootstrap other Emacs configs, so I switched to a plain Doom Emacs config.

2 Intro

I've been using Linux exclusively since 2010, **GNU Emacs** was always installed on my machine, but I didn't discover the **real** Emacs until 2020, in the beginning, I started my Vanilla Emacs configuration from scratch, but after a while, it becomes a mess. As a new Emacs user, I didn't understand the in the beginning how to optimize my configuration and how to do things correctly. I discovered then Spacemacs, which made things much easier, but it was a little slow, and just after, I found the awesome Doom Emacs, and since, I didn't quit my Emacs screen!

In the beginning, I was basically copying chunks of Emacs Lisp code from the internet, which quickly becomes a mess, specially because I was using a mixture of vanilla Emacs style configurations and Doom style ones.

Now I decided to rewrite a cleaner version of my configuration which will be more Doom friendly, and for that, I found an excellent example in *tecosaur*'s emacs-config, so my current configuration is heavily inspired by *tecosaur*'s one.

2.1 This file

This is my literate configuration file, I use it to generate Doom's config files (\$DOOMDIR/init.el, \$DOOMDIR/packages.el and \$DOOMDIR/config.el), as well as some other shell scripts, app installers, app launchers... etc.

Make config.el run (slightly) faster with lexical binding (see this blog post for more info).

```
;;; config.el -*- coding: utf-8-unix; lexical-binding: t; -*-
```

Add the shebang and the description to the setup.sh file, which will be used to set system settings and install some missing dependencies.

```
#!/bin/bash

# This is an automatically generated setup file, it installes some missing

# dependencies, configure system services, set system settings form better

# desktop integration... etc.

# Abdelhak BOUGOUFFA (c) 2022
```

Add an initial comment to the ~/.zshrc file.

```
# -*- mode: sh; -*-

This file is automatically generated from my Org literate configuration.

# Abdelhak BOUGOUFFA (c) 2022
```

3 Doom configuration files

3.1 Pseudo early-init

This file will be loaded before the content of Doom's private init.el, I add some special stuff which I want to load very early.

```
;;; pseudo-early-init.el -*- coding: utf-8-unix; lexical-binding: t; -*-
```

3.1.1 Useful functions

Here we define some useful functions, some of them are available via other packages like cl-lib, dash.el or s.el, but I don't like to load too much third party libraries, particulary in early stage, so let's define here.

```
;; (+bool "someval") ;; ==> t
1
     (defun +bool (val) (not (null val)))
2
3
     ;; (+foldr (lambda (a b) (message "(%d + %d)" a b) (+ a b)) 0 '(1 2 3 4 5)) ;; ==> 15
5
      ;; (5 + 0) -> (4 + 5) -> (3 + 9) -> (2 + 12) --> (1 + 14)
     (defun +foldr (fun acc seq)
6
       (if (null seq) acc
          (funcall fun (car seq) (+foldr fun acc (cdr seq)))))
9
     ;; (+foldl (lambda (a b) (message "(%d + %d)" a b) (+ a b)) 0 '(1 2 3 4 5)) ;; ==> 15
10
      ;; (0 + 1) -> (1 + 2) -> (3 + 3) -> (6 + 4) -> (10 + 5)
11
     (defun +foldl (fun acc seq)
12
13
       (if (null seq) acc
          (+foldl fun (funcall fun acc (car seq)) (cdr seq))))
14
15
      ;; (+all '(83 88 t "txt")) ;; ==> t
16
     (defun +all (seq)
17
       (+foldr (lambda (r l) (and r l)) t seq))
18
19
      ;; (+some '(nil nil "text" nil 2)) ;; ==> t
20
21
     (defun +some (seq)
22
       (+bool (+foldr (lambda (r l) (or r l)) nil seq)))
23
      ;; (+filter 'stringp '("A" 2 "C" nil 3)) ;; ==> ("A" "C")
24
     (defun +filter (fun seq)
25
       (if (null seq) nil
26
          (let ((head (car seq))
                (tail (cdr seq)))
28
29
            (if (funcall fun head)
                (cons head (+filter fun tail))
30
              (+filter fun tail)))))
31
32
      ;; (+str-join ", " '("foo" "10" "bar")) ;; ==> "foo, 10, bar"
33
     (defun +str-join (sep seq)
34
       (+foldl (lambda (l r) (concat l sep r))
35
               (car seq) (cdr seq)))
36
37

     (defconst LANGUAGETOOL-P (executable-find "languagetool"))
21
```

3.2 Doom modules (init.el)

Here is the literate configuration which generates the Doom's init.el file, this file contains all the enabled Doom modules with the appropriate flags.

This section defines the default source blocks arguments . All source blocks in this section inherits these headers, so they will not be tangled unless overwriting in the block's header.

3.2.1 File skeleton

This first section defines the template for the subsections, it uses the no-web syntax to include subsections specified as <<sub-section-name>>.

```
;;; init.el -*- coding: utf-8-unix; lexical-binding: t; -*-
1
2
     ;; This file controls what Doom modules are enabled and what order they load in.
     ;; Press 'K' on a module to view its documentation, and 'gd' to browse its directory.
4
5
      ;; I add some special stuff wich I want to load very early.
6
     (load! "pseudo-early-init.el")
7
9

47
        <<doom-config>>
     )
48
```

3.2.2 Input (:input)

Enable bidirectional languages support (bidi).

```
bidi bidi
```

3.2.3 General (:config)

Enable literate configuration (like this file!), and some defaults.

```
literate
(default +bindings +smartparens)
```

3.2.4 Completion (:completion)

I'm lazy, I like Emacs to complete my writings.

```
(vertico +icons)
(company +childframe)
```

3.2.5 User interface (:ui)

Enables some user interface features for better user experience, the beautiful modeline, the treemacs project tree, better version control integration with vc-gutter... and other useful stuff.

```
deft
1
     doom
    doom-dashboard
3
    hl-todo
    hydra
5
    modeline
6
    zen
    ophints
8
    nav-flash
9
     (vc-gutter +diff-hl +pretty)
```

```
(window-select +numbers)
(; (ligatures +extra)
(popup +all +defaults)
(emoji +ascii +unicode +github)
(treemacs +lsp)
workspaces
```

3.2.6 Editor (:editor)

Some editing modules, the most important feature is EVIL to enable Vim style editing in Emacs. I like also to edit with multiple cursors, enable yasnippet support, wrap long lines, auto format support.

```
(evil +everywhere)
file-templates
fold
format
multiple-cursors
parinfer
snippets
word-wrap
```

3.2.7 Emacs builtin stuff (:emacs)

Beautify Emacs builtin packages.

```
(dired +dirvish +icons)
(ibuffer +icons)
undo
vc
```

3.2.8 Terminals (:term)

Run commands in terminal from Emacs. I use mainly vterm on my local machine, however, I like to have eshell, shell and term installed to use them for remote file editing (via Tramp).

```
eshell
vterm
shell
term
```

3.2.9 Checkers (:checkers)

I like to check my documents for errors while I'm typing. The grammar module enables LanguageTool support.

```
(syntax +childframe)
(spell +aspell)
(grammar +lsp)
```

3.2.10 Tools (:tools)

I enable some useful tools which facilitate my work flow, I like to enable Docker support, EditorConfig is a good feature to have. I like to enable lsp-mode and dap-mode for coding and debugging by enabling the lsp and debugger modules with +lsp support (further customization for lsp and dap below). pdf adds support through pdf-tools, which are great for viewing PDF files inside Emacs, I also enable some extra tools, like magit, lookup, tmux... etc.

```
ein
     pdf
2
3
     rgb
     gist
     make
5
     tmux
     direnv
     upload
     biblio
     tree-sitter
10
11
     editorconfig
     (lsp +peek)
12
     (docker +lsp)
13
     (magit +forge)
     (debugger +lsp)
15
     (eval +overlay)
16
     (lookup +docsets +dictionary +offline)
```

3.2.11 Operating system (:os)

I enable tty for better support of terminal editing.

```
(tty +osc)
```

3.2.12 Language support (:lang)

Most of the projects I'm working on are mainly written in C/C++, Python, Rust and some Lisp stuff, I edit also a lot of configuration and data files in several formats (csv, yaml, xml, json, shell scripts...). I use Org-mode to manage all my papers and notes, so I need to enable as many features as I need, I do enable plantuml also to quickly plot UML models withing Org documents.

```
qt
     data
2
     plantuml
3
     emacs-lisp
     common-lisp
5
6
     (ess +lsp)
     (yaml +lsp)
     (markdown +grip)
     (csharp +dotnet)
     (racket +lsp +xp)
10
11
     (lua +lsp +fennel)
     (web +tree-sitter)
12
     (ocaml +tree-sitter)
13
     (cc +lsp +tree-sitter)
     (sh +lsp +tree-sitter)
15
16
     (json +lsp +tree-sitter)
     (rust +lsp +tree-sitter)
     (julia +lsp +tree-sitter)
18
     (latex +lsp +latexmk +fold)
19
     (python +lsp +pyenv +pyright +tree-sitter)
20
     (scheme +chez +mit +chicken +gauche +guile +chibi)
21
     (org +dragndrop +gnuplot +jupyter +pandoc +noter +journal +hugo +present +pomodoro +roam2)
22
```

3.2.13 Email (:email)

I like to use mu4e to manage mail mailboxes. The +org flag adds org-msg support and +gmail adds better management of Gmail accounts.

```
(:if (executable-find "mu") (mu4e +org +gmail))
```

3.2.14 Apps (:app)

Emacs contains a ton of applications, some of them are supported by Doom, I like to use Emacs manage my calendar, chat on IRC, and receive news. I do use EMMS sometimes to play music without leaving Emacs, and I like to enable support for emacs-everywhere.

```
calendar
irc
semms
everywhere
rss
```

3.3 Additional packages (packages.el)

This section generates Doom's packages.el, with the associated configurations (use-package! blocks). This file shouldn't be byte compiled.

```
;; -*- coding: utf-8-unix; no-byte-compile: t; -*-
```

4 General Emacs settings

4.1 User information

```
(setq user-full-name "Abdelhak Bougouffa"
user-mail-address "abougouffa@fedoraproject.org")
```

4.2 Shared information

```
(defvar +my/lang-mother-tongue "ar")
(defvar +my/lang-main "en")
(defvar +my/lang-secondary "fr")

(defvar +my/biblio-libraries-list (list (expand-file-name "~/Zotero/library.bib")))
(defvar +my/biblio-storage-list (list (expand-file-name "~/Zotero/storage/")))
(defvar +my/biblio-notes-path (expand-file-name "~/PhD/bibliography/notes/"))
(defvar +my/biblio-styles-path (expand-file-name "~/Zotero/styles/"))
```

4.3 Secrets

Set the path to my GPG encrypted secrets. I like to set the cache expiry to nil instead of the default 2 hours.

```
(setq auth-sources '("~/.authinfo.gpg")
    auth-source-do-cache t
    auth-source-cache-expiry 86400 ; All day, defaut is 2h (7200)
    password-cache t
    password-cache-expiry 86400)

(after! epa
    (setq-default epa-file-encrypt-to '("F808A020A3E1AC37")))
```

4.4 Better defaults

4.4.1 File deletion

Delete files by moving them to trash.

```
(setq-default delete-by-moving-to-trash t trash-directory nil) ;; Use freedesktop.org trashcan
```

4.4.2 Window

Take new window space from all other windows (not just current).

```
(setq-default window-combination-resize t)
```

Split defaults Split horizontally to right, vertically below the current window.

```
(setq evil-vsplit-window-right t
evil-split-window-below t)
```

Show list of buffers when splitting.

```
(defadvice! prompt-for-buffer (&rest _)
    :after '(evil-window-split evil-window-vsplit)
    (consult-buffer))
```

4.4.3 Messages buffer

Stick to buffer tail, useful with *Messages* buffer. Derived from this answer.

```
(defvar +messages--auto-tail-enabled nil)
2
3
     (defun +messages--auto-tail-a (&rest arg)
       "Make *Messages* buffer auto-scroll to the end after each message."
       (let* ((buf-name (buffer-name (messages-buffer)))
5
               ;; Create *Messages* buffer if it does not exist
              (buf (get-buffer-create buf-name)))
         ;; Activate this advice only if the point is \_not\_ in the *Messages* buffer
         ;; to begin with. This condition is required; otherwise you will not be
         ;; able to use `isearch' and other stuff within the *Messages* buffer as
10
          ;; the point will keep moving to the end of buffer :P
11
         (when (not (string= buf-name (buffer-name)))
           ;; Go to the end of buffer in all *Messages* buffer windows that are
13
              *live* (`get-buffer-window-list' returns a list of only live windows).
14
           (dolist (win (get-buffer-window-list buf-name nil :all-frames))
15
16
             (with-selected-window win
17
                (goto-char (point-max))))
           ;; Go to the end of the *Messages* buffer even if it is not in one of
18
19
            ;; the live windows.
           (with-current-buffer buf
20
             (goto-char (point-max))))))
21
22
     (defun +messages-auto-tail-toggle ()
23
       "Auto tail the '*Messages*' buffer."
24
25
       (interactive)
       (if +messages--auto-tail-enabled
26
27
           (progn
             (advice-remove 'message '+messages--auto-tail-a)
             (setq +messages--auto-tail-enabled nil)
29
             (message "+messages-auto-tail: Disabled."))
30
```

```
(advice-add 'message :after '+messages--auto-tail-a)
(setq +messages--auto-tail-enabled t)
(message "+messages-auto-tail: Enabled.")))
```

4.4.4 Undo and auto-save

```
1 (package! super-save
2 :disable t)
```

Auto-save

```
(setq auto-save-default t) ;; enable built-in `auto-save-mode'
```

Undo Tweak undo-fu and other stuff from Doom's :emacs undo.

```
package! vundo
recipe (:host github
repo "casouri/vundo"))
```

Visual Undo (vundo)

```
(use-package! vundo
    :defer t
    :custom
    (vundo-glyph-alist vundo-unicode-symbols)
    (vundo-compact-display t)
    (vundo-window-max-height 5))
```

4.4.5 Editing

```
;; Stretch cursor to the glyph width
(setq-default x-stretch-cursor t)

;; Enable relative line numbers
(setq display-line-numbers-type 'relative)

;; Iterate through CamelCase words
(global-subword-mode 1)
```

4.4.6 Emacs sources

```
(setq source-directory
(expand-file-name "~/Softwares/src/emacs"))
```

4.4.7 Frame

Focus created frame The problem is, every time I launch an Emacs frame (from KDE), Emacs starts with no focus, I need each time to Alt-TAB to get Emacs under focus, and then start typing. I tried changing this behavior from Emacs by hooking raise-frame at startup, but it didn't work.

Got from this comment, not working on my Emacs version.

```
;; NOTE: Not tangled, not working
(add-hook 'server-switch-hook #'raise-frame)
```

After some investigations, I found that this issue is probably KDE specific, the issue goes away by setting: Window Management > Window Behavior > Focus > Focus stealing prevention to None in the KDE Settings.

4.4.8 Browsers

```
(setq browse-url-chrome-program "brave")
```

5 Emacs daemon

5.1 Initialization

When the daemon is running, I almost always want to do a few particular things with it, so I may as well eat the load time at startup. We also want to keep mu4e running.

Lastly, while I'm not sure quite why it happens, but after a bit it seems that new Emacs client frames start on the *scratch* buffer instead of the dashboard. I prefer the dashboard, so let's ensure that's always switched to in new frames.

```
(defun +daemon-startup ()
       (when (require 'mu4e nil t)
3
         ;; Automatically start `mu4e' in background.
         (when (load! "mu-lock.el" (expand-file-name "email/mu4e/autoload" doom-modules-dir) t)
5
           (setq +mu4e-lock-greedy t
6
                 +mu4e-lock-relaxed t)
           (when (+mu4e-lock-available t)
             (mu4e--start)))
9
         ;; Check each 5m, if `mu4e' if closed, start it in background.
11
         (run-at-time
12
```

```
60 (* 60 5) ;; Check each 5 minutes
13
14
          (lambda ()
             (when (and (not (mu4e-running-p)) (+mu4e-lock-available))
15
16
               (mu4e--start)
               (message "Started `mu4e' in background.")))))
17
18
        :: RSS
19
       (when (require 'elfeed nil t)
20
         (run-at-time nil (* 2 60 60) #'elfeed-update))) ;; Check every 2h
21
22
     (when (daemonp)
23
        :: Daemon startup
24
        (add-hook 'emacs-startup-hook #'+daemon-startup)
       ;; After creating a new frame (via emacsclient)
26
27
       (add-hook!
        'server-after-make-frame-hook
28
         :: Reload Doom's theme
29
30
        #'doom/reload-theme
         ;; Switch to Dashboard, unless we started in one of the special buffers
31
32
        (unless (string-match-p "\\*draft\\|\\*stdin\\|emacs-everywhere" (buffer-name))
          (switch-to-buffer +doom-dashboard-name))))
```

5.2 Tweaks

5.2.1 Save recent files

When editing files with Emacs client, the files does not get stored by recentf, making Emacs forgets about recently opened files. A quick fix is to hook the recentf-save-list command to the delete-frame-functions and delete-terminal-functions which gets executed each time a frame/terminal is deleted.

```
(when (daemonp)
(add-hook! '(delete-frame-functions delete-terminal-functions)
(let ((inhibit-message t))
(recentf-save-list)
(savehist-save))))
```

6 Package configuration

6.1 User interface

6.1.1 Font

Doom exposes five (optional) variables for controlling fonts in Doom. Here are the three important ones: doom-font, doom-unicode-font and doom-variable-pitch-font. The doom-big-font is used for doom-big-font-mode; use this for presentations or streaming.

They all accept either a font-spec, font string ("Input Mono-12"), or xlfd font string. You generally only need these two:

Some good fonts:

- Iosevka Fixed (THE FONT)
- Nerd fonts
 - FantasqueSansMono Nerd Font Mono
 - mononoki Nerd Font Mono
 - CaskaydiaCove Nerd Font Mono
- Cascadia Code
- Fantasque Sans Mono

- JuliaMono (good Unicode support)
- IBM Plex Mono
- JetBrains Mono
- Roboto Mono
- Source Code Pro
- Input Mono Narrow
- Fira Code

```
(setq doom-font (font-spec :family "Iosevka Fixed" :size 20)
doom-big-font (font-spec :family "Iosevka Fixed" :size 30 :weight 'light)

```

Dashboard

6.1.6 Which key

Make which-key popup faster.

```
(setq which-key-idle-delay 0.5 ;; Default is 1.0 which-key-idle-secondary-delay 0.05) ;; Default is nil
```

I've stolen this chunk (like many others) from tecosaur's config, it helps to replace the evil- prefix with a unicode symbol, making which-key's candidate list less verbose.

6.1.7 Window title

I'd like to have just the buffer name, then if applicable the project folder.

```
(setq frame-title-format
          '(""
2
           (:eval
            (if (s-contains-p org-roam-directory (or buffer-file-name ""))
               (replace-regexp-in-string ".*/[0-9]*-?" "
                                       (subst-char-in-string ?_ ? buffer-file-name))
6
              "%b"))
           (:eval
9
            (let* ((project-name (projectile-project-name))
                  (project-name (if (string= "-" project-name)
10
                                  (ignore-errors (file-name-base (string-trim-right (vc-root-dir))))
11
                                project-name)))
12
13
              (when project-name
                14
```

6.1.8 SVG tag and svg-lib

```
(use-package! svg-tag-mode

commands svg-tag-mode

25
```

```
(after! svg-lib
;; Set `svg-lib' cache directory
(setq svg-lib-icons-dir (expand-file-name "svg-lib" doom-data-dir)))
```

6.1.9 Focus

Dim the font color of text in surrounding paragraphs, focus only on the current line.

```
1 (package! focus)

1 (use-package! focus
2 :commands focus-mode)
```

6.1.10 Scrolling

(when EMACS29+

(pixel-scroll-precision-mode 1))

5

6

```
(setq hscroll-step 1
8
9
           hscroll-margin 0
           scroll-step 1
10
           scroll-margin 0
11
           scroll-conservatively 101
^{12}
           scroll-up-aggressively 0.01
13
14
           scroll-down-aggressively 0.01
           scroll-preserve-screen-position 'always
15
           auto-window-vscroll nil
16
           fast-but-imprecise-scrolling nil)
```

6.1.11 All the icons

Set some custom icons for some file extensions, basically for .m files.

```
(after! all-the-icons
(setcdr (assoc "m" all-the-icons-extension-icon-alist)
(cdr (assoc "matlab" all-the-icons-extension-icon-alist))))
```

6.2 Editing

6.2.1 Scratch buffer

Tell the scratch buffer to start in emacs-lisp-mode.

```
(setq doom-scratch-initial-major-mode 'emacs-lisp-mode)
```

6.2.2 Mouse buttons

Map extra mouse buttons to jump between buffers

```
(map! :n [mouse-8] #'better-jumper-jump-backward
:n [mouse-9] #'better-jumper-jump-forward)

;; Enable horizontal scrolling with the second mouse wheel or the touchpad

(setq mouse-wheel-tilt-scroll t
    mouse-wheel-progressive-speed nil)
```

6.2.3 Very large files

The very large files mode loads large files in chunks, allowing one to open ridiculously large files.

```
1 (package! vlf)
```

To make VLF available without delaying startup, we'll just load it in quiet moments.

```
(use-package! vlf-setup
2 :defer-incrementally vlf-tune vlf-base vlf-write vlf-search vlf-occur vlf-follow vlf-ediff vlf)
```

6.2.4 Evil

```
(after! evil
;; This fixes https://github.com/doomemacs/doomemacs/issues/6478
;; Ref: https://github.com/emacs-evil/evil/issues/1630
(evil-select-search-module 'evil-search-module 'isearch)

(setq evil-kill-on-visual-paste nil ; Don't put overwritten text in the kill ring
evil-move-cursor-back nil)) ; Don't move the block cursor when toggling insert mode
```

6.2.5 Aggressive indent

```
package! aggressive-indent

(use-package! aggressive-indent
commands (aggressive-indent-mode))
```

6.2.6 YASnippet

Nested snippets are good, enable that.

```
(setq yas-triggers-in-field t)
```

6.3 Literate configuration

6.3.1 Allow babel execution in doom CLI actions

This file generates all my Doom config files, it works nicely, but for it to work with doom sync et al. I need to make sure that Org doesn't try to confirm that I want to allow evaluation (I do!).

Thankfully Doom supports \$DOOMDIR/cli.el file which is sourced every time a CLI command is run, so we can just enable evaluation by setting org-confirm-babel-evaluate to nil there.

While we're at it, we should silence org-babel-execute-src-block to avoid polluting the output.

```
;;; cli.el -*- lexical-binding: t; -*-

(setq org-confirm-babel-evaluate nil)

(defun doom-shut-up-a (orig-fn &rest args)
    (quiet! (apply orig-fn args)))

(advice-add 'org-babel-execute-src-block :around #'doom-shut-up-a)
```

6.4 Completion & IDE

6.4.1 Company

I do not find company useful in Org files.

```
(setq company-global-modes
('(not erc-mode)
circe-mode
message-mode
help-mode
gud-mode
vterm-mode
org-mode))
```

```
(after! company-box
       (when (daemonp)
2
         (defun +company-box--reload-icons-h ()
           (setq company-box-icons-all-the-icons
                  (let ((all-the-icons-scale-factor 0.8))
5

6.4.3 Projectile

Doom Emacs defined a function (doom-project-ignored-p path) and uses it with projectile-ignored-project-function. So we will create a wrapper function which calls Doom's one, with an extra check.

```
;; Run `M-x projectile-discover-projects-in-search-path' to reload paths from this variable
1
     (setq projectile-project-search-path
2
            ("~/PhD/papers"
3
             "~/PhD/workspace"
4
             "~/PhD/workspace-no"
             "~/PhD/workspace-no/ez-wheel/swd-starter-kit-repo"
6
             ("~/Projects/foss" . 2))) ;; ("dir" . depth)
8
     (setq projectile-ignored-projects
9
           '("/tmp"
10
             "~/"
11
             "~/.cache"
12
             "~/.doom.d"
```

```
"~/.emacs.d/.local/straight/repos/"))
14
15
     (setq +projectile-ignored-roots
16
            '("~/.cache"
17
              ;; No need for this one, as `doom-project-ignored-p' checks for files in `doom-local-dir'
18
             "~/.emacs.d/.local/straight/"))
19
20
     (defun +projectile-ignored-project-function (filepath)
21
       "Return t if FILEPATH is within any of `+projectile-ignored-roots'"
22
       (require 'cl-lib)
23
       (or (doom-project-ignored-p filepath) ;; Used by default by doom with `projectile-ignored-project-function'
24
           (cl-some (lambda (root) (file-in-directory-p (expand-file-name filepath) (expand-file-name root)))
25
               +projectile-ignored-roots)))
26
27
28
     (setq projectile-ignored-project-function #'+projectile-ignored-project-function)
```

6.4.4 Tramp

Let's try to make tramp handle prompts better

```
(after! tramp
(setenv "SHELL" "/bin/bash")
(setq tramp-shell-prompt-pattern "\\(?:^\\|
(\)[^]#$%\n]*#?[]#$%>] *\\(\\[[0-9;]*[a-zA-Z] *\\)*")) ;; default +
```

6.4.5 Eros-eval

This makes the result of evals slightly prettier.

```
(setq eros-eval-result-prefix " ")
```

6.4.6 dir-locals.el

Reload dir-locals.el variables after modification. Taken from this answer.

```
(defun +dir-locals-reload-for-current-buffer ()
       "reload dir locals for the current buffer"
       (interactive)
3
       (let ((enable-local-variables :all))
4
         (hack-dir-local-variables-non-file-buffer)))
6
     (defun +dir-locals-reload-for-all-buffers-in-this-directory ()
8
       "For every buffer with the same `default-directory` as the
     current buffer's, reload dir-locals."
9
       (interactive)
10
       (let ((dir default-directory))
11
         (dolist (buffer (buffer-list))
12
           (with-current-buffer buffer
13
             (when (equal default-directory dir)
14
               (+dir-locals-reload-for-current-buffer))))))
15
16
     (defun +dir-locals-enable-autoreload ()
17
18
       (when (and (buffer-file-name)
                   (equal dir-locals-file (file-name-nondirectory (buffer-file-name))))
19
         (message "Dir-locals will be reloaded after saving.")
20
         (add-hook 'after-save-hook '+dir-locals-reload-for-all-buffers-in-this-directory nil t)))
21
22
     (add-hook! '(emacs-lisp-mode-hook lisp-data-mode-hook) #'+dir-locals-enable-autoreload)
23
```

6.4.7 Language Server Protocol

Eglot Eglot uses **project.el** to detect the project root. This is a workaround to make it work with projectile:

```
(after! eglot
;; A hack to make it works with projectile
(defun projectile-project-find-function (dir)
(let* ((root (projectile-project-root dir)))
(and root (cons 'transient root))))

(with-eval-after-load 'project
    (add-to-list 'project-find-functions 'projectile-project-find-function))

;; Use clangd with some options
(set-eglot-client! 'c++-mode '("clangd" "-j=3" "--clang-tidy")))
```

LSP mode

Tweak UI LSP mode provides a set of configurable UI stuff. By default, Doom Emacs disables some UI components; however, I like to enable some less intrusive, more useful UI stuff.

```
(after! lsp-ui
(setq lsp-ui-sideline-enable t
    lsp-ui-sideline-show-code-actions t
    lsp-ui-sideline-show-diagnostics t
    lsp-ui-sideline-show-hover nil
    lsp-log-io nil
    lsp-lens-enable t ; not working properly with ccls!
    lsp-diagnostics-provider :auto
    lsp-enable-symbol-highlighting t
    lsp-headerline-breadcrumb-enable nil
    lsp-headerline-breadcrumb-segments '(symbols)))
```

LSP mode with clangd

```
;; NOTE: Not tangled, using the default ccls
(after! ccls
(setq ccls-initialization-options
'(:index (:comments 2
:trackDependency 1
:threads 4)
:completion (:detailedLabel t)))
(set-lsp-priority! 'ccls 2)); optional as ccls is the default in Doom
```

LSP mode with ccls

Enable 1sp over tramp

1. Python

```
(after! tramp
2
       (require 'lsp-mode)
       ;; (require 'lsp-pyright)
3
       (setq lsp-enable-snippet nil
             lsp-log-io nil
             ;; To bypass the "lsp--document-highlight fails if
             ;; textDocument/documentHighlight is not supported" error
             lsp-enable-symbol-highlighting nil)
9
10
       (lsp-register-client
11
        (make-lsp-client
12
         :new-connection (lsp-tramp-connection "pyls")
         :major-modes '(python-mode)
14
         :remote? t
15
         :server-id 'pyls-remote)))
```

2. C/C++ with ccls

```
;; NOTE: WIP: Not tangled
     (after! tramp
2
       (require 'lsp-mode)
       (require 'ccls)
       (setq lsp-enable-snippet nil
             lsp-log-io nil
             lsp-enable-symbol-highlighting t)
9
       (lsp-register-client
10
        (make-lsp-client
         :new-connection
12
         (1sp-tramp-connection
13
          (lambda ()
14
            (cons ccls-executable ; executable name on remote machine 'ccls'
15
16
                  ccls-args)))
         :major-modes '(c-mode c++-mode objc-mode cuda-mode)
17
18
         :remote? t
19
         :server-id 'ccls-remote))
20
       (add-to-list 'tramp-remote-path 'tramp-own-remote-path))

          :major-modes '(c-mode c++-mode objc-mode cuda-mode)
```

```
18 :remote? t
19 :server-id 'clangd-remote)))
```

VHDL By default, LSP uses the proprietary VHDL-Tool to provide LSP features; however, there is free and open source alternatives: ghdl-ls and rust_hdl. I have some issues running ghdl-ls installed form pip through the pyghdl package, so let's use rust_hdl instead.

```
(use-package! vhdl-mode
       :hook (vhdl-mode . #'+lsp-vhdl-ls-load)
2
       :init
3
       (defun +lsp-vhdl-ls-load ()
         (interactive)
5
         (lsp t)
6
         (flycheck-mode t))
8
       :config
9
       ;; Required unless vhdl_ls is on the $PATH
10
       (setq lsp-vhdl-server-path "~/Projects/foss/repos/rust_hdl/target/release/vhdl_ls"
11
             lsp-vhdl-server 'vhdl-ls
12
             lsp-vhdl--params nil)
13
       (require 'lsp-vhdl))
14
```

```
1 (package! lsp-sonarlint 2 :disable t)
```

SonarLint

```
(use-package! lsp-sonarlint)
```

6.4.8 Cppcheck

Check for everything!

6.4.9 Project CMake

A good new package to facilitate using CMake projects with Emacs, it glues together project, eglot, cmake and clangd.

6.4.10 Clang-format

```
package! clang-format

(use-package! clang-format
    :when CLANG-FORMAT-P
    :commands (clang-format-region))
```

6.4.11 Auto-include C++ headers

6.4.12 Emacs Refactor

6.4.13 Lorem ipsum

6.5 Symbols

6.5.1 Emojify

For starters, twitter's emojis look nicer than emoji-one. Other than that, this is pretty great OOTB.

```
(setq emojify-emoji-set "twemoji-v2")
```

One minor annoyance is the use of emojis over the default character when the default is actually preferred. This occurs with overlay symbols I use in Org mode, such as checkbox state, and a few other miscellaneous cases.

We can accommodate our preferences by deleting those entries from the emoji hash table

```
(defvar emojify-disabled-emojis
        3
        ;; Terminal powerline
4
6
        ;; Box drawing " " " ")
      "Characters that should never be affected by `emojify-mode'.")
9
10
    (defadvice! emojify-delete-from-data ()
      "Ensure `emojify-disabled-emojis' don't appear in `emojify-emojis'."
11
12
      :after #'emojify-set-emoji-data
13
      (dolist (emoji emojify-disabled-emojis)
        (remhash emoji emojify-emojis)))
14
```

Now, it would be good to have a minor mode which allowed you to type ascii/gh emojis and get them converted to unicode. Let's make one.

```
(defun emojify--replace-text-with-emoji (orig-fn emoji text buffer start end &optional target)
1
       "Modify
                emojify--propertize-text-for-emoji' to replace ascii/github emoticons with unicode emojis, on the`
2
        fly.
       (if (or (not emoticon-to-emoji) (= 1 (length text)))
3
           (funcall orig-fn emoji text buffer start end target)
         (delete-region start end)
5
6
         (insert (ht-get emoji "unicode"))))
8
     (define-minor-mode emoticon-to-emoii
       "Write ascii/gh emojis, and have them converted to unicode live."
9
       :global nil
10
11
       :init-value nil
12
       (if emoticon-to-emoji
13
           (progn
             (setq-local emojify-emoji-styles '(ascii github unicode))
14
             (advice-add 'emojify--propertize-text-for-emoji :around #'emojify--replace-text-with-emoji)
15
             (unless emojify-mode
16
               (emojify-turn-on-emojify-mode)))
17
         (setq-local emojify-emoji-styles (default-value 'emojify-emoji-styles))
18
         (advice-remove 'emojify--propertize-text-for-emoji #'emojify--replace-text-with-emoji)))
19
```

This new minor mode of ours will be nice for messages, so let's hook it in for Email and IRC.

```
(add-hook! '(mu4e-compose-mode org-msg-edit-mode circe-channel-mode) (emoticon-to-emoji 1))
```

6.5.2 Ligatures

Extra ligatures are good, however, I'd like to see my keywords! Let's disable them in C/C++, Rust and Python modes. In addition to that, Lisps do replace lambdas with the greek symbol, however, this cause miss formatting and sometimes messes up with the parenthesis, so let's disable ligatures on Lisps.

```
(defun +appened-to-negation-list (head tail)
       (if (sequencep head)
2
         (delete-dups
3
          (if (eq (car tail) 'not)
              (append head tail)
5
            (append tail head)))
         tail))
     (when (modulep! :ui ligatures)
       (setq +ligatures-extras-in-modes
10
11
             (+appened-to-negation-list
               +ligatures-extras-in-modes
12
               '(not c-mode c++-mode emacs-lisp-mode python-mode scheme-mode racket-mode rust-mode)))
13
14
       (setq +ligatures-in-modes
15
             (+appened-to-negation-list
16
               +ligatures-in-modes
17
               '(not emacs-lisp-mode scheme-mode racket-mode))))
18
```

6.6 Checkers (spell & grammar)

6.6.1 Spell-Fu

Install the aspell back-end and the dictionaries to use with spell-fu

sudo pacman -S aspell aspell-en aspell-fr

Now, spell-fu supports multiple languages! Let's add English, French and Arabic. So I can "mélanger les langues sans avoir de problèmes!".

```
(after! spell-fu
       (defun +spell-fu-register-dictionary (lang)
         "Add `LANG` to spell-fu multi-dict, with a personal dictionary."
          ;; Add the dictionary
         (spell-fu-dictionary-add (spell-fu-get-ispell-dictionary lang))
         (let ((personal-dict-file (expand-file-name (format "aspell.%s.pws" lang) doom-user-dir)))
6
           ;; Create an empty personal dictionary if it doesn't exists
           (unless (file-exists-p personal-dict-file) (write-region "" nil personal-dict-file))
8
9
           ;; Add the personal dictionary
           (spell-fu-dictionary-add (spell-fu-get-personal-dictionary (format "%s-personal" lang)
10
         personal-dict-file))))
11
       (add-hook 'spell-fu-mode-hook
12
                 (lambda ()
13
14
                    (+spell-fu-register-dictionary +my/lang-main)
                    (+spell-fu-register-dictionary +my/lang-secondary))))
15
```

6.6.2 Guess language

Can be interesting for automatically switching the language for spell checking, grammar...

```
(package! guess-language
:recipe (:host github
:repo "tmalsburg/guess-language.el"))

(use-package! guess-language
:config
(setq guess-language-languages '(en fr ar)
guess-language-min-paragraph-length 35
guess-language-languages '(en . ("en_US" "English" " "English"))
```

(fr . ("francais" "French" " " "Français"))

```
(ar . ("arabic" "Arabic" " "Arabic"))))

s;;:hook (text-mode . guess-language-mode)

ccommands (guess-language

guess-language-mode

guess-language-region

guess-language-mark-lines))
```

6.6.3 Grammarly

Use either eglot-grammarly or lsp-grammarly.

Eglot

```
(use-package! eglot-grammarly
:when (modulep! :tools lsp +eglot)
:commands (+lsp-grammarly-load)
:init
(defun +lsp-grammarly-load ()
"Load Grammarly LSP server for Eglot."
(interactive)
(require 'eglot-grammarly)
(call-interactively #'eglot)))
```

LSP Mode

```
(use-package! lsp-grammarly
    :when (and (modulep! :tools lsp) (not (modulep! :tools lsp +eglot)))
    :commands (+lsp-grammarly-load +lsp-grammarly-toggle)

LTeX Originally, LTeX LS stands for LATEX Language Server, it acts as a Language Server for LATEX, but not only. It can check the grammar and the spelling of several markup languages such as BibTeX, ConTeXt, LATEX, Markdown, Org, reStructuredText... and others. Alongside, it provides interfacing with LanguageTool to implement natural language checking.

TO BE WATCHED: Other WIP LanguageTool LSP implementations for both LSP Mode and Eglot can be interesting. However, LTeX seems to be a good solution, as it understands the structure of plain text formats such as Org and Markdown, which reduces the false positives due to the marking and special commands.

6.8.4 Info colors

Better colors for manual pages.

(add-hook 'Info-selection-hook 'info-colors-fontify-node)

6.8.5 Zotero Zotxt

```
(package! zotxt)

(use-package! zotxt
:when ZOTERO-P
:commands org-zotxt-mode)
```

6.8.6 CRDT

Collaborative editing for geeks! crdt.el adds support for Conflict-free Replicated Data Type.

6.8.7 The Silver Searcher

An Emacs front-end to *The Silver Searcher*, first we need to install ag using sudo pacman -S the_silver_searcher.

```
(package! ag)

(use-package! ag
:when AG-P
:commands (ag
ag-files
ag-regexp
ag-project
ag-project-files
ag-project-regexp))
```

6.8.8 Page break lines

A feature that displays ugly form feed characters as tidy horizontal rules. Inspired by M-EMACS.

```
(package! page-break-lines)

(use-package! page-break-lines
    :diminish
    :init (global-page-break-lines-mode))
```

6.8.9 Emacs Application Framework

EAF is presented as: A free/libre and open-source extensible framework that revolutionizes the graphical capabilities of Emacs. Or the key to ultimately Live in Emacs.

First, install EAF as specified in the project's readme. To update EAF, we need to run git pull; ./install-eaf.py in lisp/emacs-application-framework and (M-x eaf-install-and-update) in Emacs. This updates EAF, applications and their dependencies.

```
(use-package! eaf
2
       :when EAF-P

7.4 VPN configuration

7.4.1 NetExtender wrapper

I store my NetExtender VPN parameters in a GPG encrypted file. The credentials file contains a line of private parameters to pass to netExtender, like this:

```
echo "-u <USERNAME> -d <DOMAINE> -p <PASSWORD> -s <SERVER_IP>" \
1 gpg -c > sslvpn.gpg
```

Then I like to have a simple script which decrypt the credentials and launch a session via the netExtender command.

```
#!/bin/bash

if ! command -v netExtender &> /dev/null

then

echo "netExtender not found, installing from AUR using 'yay'"

yay -S netextender
```

```
fi

8

9

MY_LOGIN_PARAMS_FILE="$HOME/.ssh/sslvpn.gpg"

10

11

echo "Y\n" | netExtender --auto-reconnect \
12

$(gpg -q --for-your-eyes-only --no-tty -d "${MY_LOGIN_PARAMS_FILE}")
```

7.4.2 Emacs + NetExtender

```
(when NETEXTENDER-P

21
             (message "Cannot kill NetExtender")))))
22
```

7.5 Email (mu4e)

Configuring mu4e as email client needs three parts:

- Incoming mail configuration IMAP (using mbsync)
- Outgoing mail configuration SMTP (using smtpmail or msmtp)
- Email indexer and viewer (via mu and mu4e)

7.5.1 IMAP (mbsync)

You will need to:

- Install mu and isync (sudo pacman -S mu isync)
- Set up a proper configuration file for your accounts at ~/.mbsyncrc
- Run mu init --maildir=~/Maildir --my-address=user@host1 --my-address=user@host2
- Run mbsync -c ~/.mbsyncrc -a
- For sending mails from mu4e, add a ~/.authinfo file, file contains a line in this format machine MAIL.DOMAIN.TLD login USER port 587 password PASSWD
- Encrypt the ~/.authinfo file using GPG gpg -c ~/.authinfo and delete the original unencrypted file.

I use a mbsyncrc file for multi-accounts, with some hacks for Gmail accounts (to rename the [Gmail]/... folders). Here is an explained configuration example.

In the configuration file, there is an parameter named Pass which should be set to the password in plain text. Most of the examples you can find online uses this parameter, but in real life, nobody uses it, it is extremely unsafe to put the password in plain text configuration file. Instead, mbsync configuration file provides the alternative PassCmd parameter, which can be set to an arbitrary shell command which gets the password for you. You can set it for example to call the pass password manager to output the account password, or to bw command (for Bitwarden users). For me, I'm using it with Emacs' ~/.authinfo.gpg, the PassCmd in my configuration uses GPG and awk to decrypt and filter the file content to find the required account's password. I set PassCmd to something like this:

```
gpg -q --for-your-eyes-only --no-tty --logger-file /dev/null --batch -d ~/.authinfo.gpg | awk '/machine

→ smtp\.googlemail\.com login username@gmail\.com/ {print $NF}'
```

Remember the line format in the ~/.authinfo.gpg file:

```
machine smtp.googlemail.com login username@gmail.com port 587 password PASSWD
```

This PassCmd command above, decrypts the ~/.authinfo.gpg, passes it to awk to search the line containing "machine smtp.googlemail.com login username@gmail.com" and prints the last field (the last field \$NF in the awk command corresponds to the password, as you can see in the line format).

The whole ~/.mbsync file should look like this:

```
# mbsync config file
1
     # GLOBAL OPTIONS
2
     BufferLimit 50mb
                                   # Global option:
                                                       Default buffer size is 10M, too small for modern machines.
3
                                    # Channels global: Sync everything "Pull Push New ReNew Delete Flags" (default

7.5.2 SMTP (msmtp)

I was using the standard smtpmail to send mails; but recently, I'm getting problems when sending mails. I passed a whole day trying to fix mail sending for one of my accounts, at the end of the day, I got a working setup; BUT, sending the first mail always ask me about password! I need to enter the password to be able to send the mail, Emacs asks me then if I want to save it to ~/.authifo.gpg, when I confirm saving it, it got duplicated in the .authinfo.gpg file.

This seems to be a bug; I also found somewhere that smtpmail is buggy, and that msmtp seems to be a good alternative, so now I'm using a msmtp-based setup, and it works like a charm!

For this, we will need an additional configuration file, ~/.msmtprc, I configure it the same way as mbsync, specifying this time SMTP servers instead of IMAP ones. I extract the passwords from ~/.authinfo.gpg using GPG and awk, the same way we did in mbsync's configuration.

The following is a sample file ~/.msmtprc.

```
# Set default values for all following accounts.
     defaults
2
3
     auth
                               on
     tls starttls
5
                               on
     tls_trust_file
                               /etc/ssl/certs/ca-certificates.crt
6
     logfile
                               ~/.msmtp.log
9
     # Gmail
     account
                               gmail
10
11
     auth
                               plain
                               smtp.googlemail.com
12
                               587
     port
13
     from
                               username@gmail.com
14
                               username
15
     passwordeval
                               "gpg -q --for-your-eyes-only --no-tty --logger-file /dev/null --batch -d
16
         ~/.authinfo.gpg | awk '/machine smtp.googlemail.com login .*@gmail.com/ {print $NF}'"
     add_missing_date_header on
17
18
     ## Gmail - aliases
19

31
     from
     user
32
     passwordeval
                               "gpg -q --for-your-eyes-only --no-tty --logger-file /dev/null --batch -d
33

→ ~/.authinfo.gpg | awk '/machine smtp.domaine.tld/ {print $NF}'

     tls_nocertcheck # ignore TLS certificate errors
```

7.5.3 Mail client and indexer (mu and mu4e)

Add mu4e to path if it exists on the file system.

```
(add-to-list 'load-path "/usr/local/share/emacs/site-lisp/mu4e")
```

I configure my email accounts in a private file in lisp/private/+mu4e-accounts.el, which will be loaded after this common part:

```
(after! mu4e
        (require 'org-msg)
2
        (require 'mu4e-contrib)
3
       (require 'mu4e-icalendar)
4
       (require 'org-agenda)
6
        ;; Common parameters
       (setq mu4e-update-interval (* 3 60) ;; Every 3 min
              \verb| mu4e-index-update-error-warning nil| ;; \textit{Do not show warning after update}
9
              mu4e-get-mail-command "mbsync -a" ;; Not needed, as +mu4e-backend is 'mbsync by default
10
             mu4e-main-hide-personal-addresses t ;; No need to display a long list of my own addresses!
11
              mu4e-attachment-dir (expand-file-name "~/Downloads/mu4e-attachements")
12
              mu4e-sent-messages-behavior 'sent ;; Save sent messages
13
             \verb|mu4e-context-policy 'pick-first | \textit{ ;; Start with the first context}|\\
14
             \verb| mu4e-compose-context-policy 'ask)|; Always ask which context to use when composing a new mail
15
16
17
        ;; Use msmtp instead of smtpmail
18

7.7 Multimedia

I like to use an MPD powered EMMS, so when I restart Emacs I do not lose my music.

7.7.1 MPD and MPC

```
;; Not sure if it is required!
(after! mpc
(setq mpc-host "localhost:6600"))
```

I like to launch the music daemon mpd using Systemd, let's define some commands in Emacs to start/kill the server:

```
(defun +mpd-daemon-start ()
       "Start MPD, connects to it and syncs the metadata cache."
2
      (interactive)
      (let ((mpd-daemon-running-p (+mpd-daemon-running-p)))
         5
6
           ;; Start the daemon if it is not already running.
           (setq mpd-daemon-running-p (zerop (call-process "systemctl" nil nil nil "--user" "start" "mpd.service"))))
7
         (cond ((+mpd-daemon-running-p)
8
                (+mpd-mpc-update)
                (emms-player-mpd-connect)
10
11
               (emms-cache-set-from-mpd-all)
               (message "Connected to MPD!"))
12
               (t
13
                (warn "An error occured when trying to start Systemd mpd.service.")))))
```

```
15
16
     (defun +mpd-daemon-stop ()
       "Stops playback and kill the MPD daemon."
17
       (interactive)
18
       (emms-stop)
19
       (call-process "systemctl" nil nil nil "--user" "stop" "mpd.service")
20
       (message "MPD stopped!"))
21
22
     (defun +mpd-daemon-running-p ()
23
       "Check if the MPD service is running." \,
24
       (zerop (call-process "systemctl" nil nil nil "--user" "is-active" "--quiet" "mpd.service")))
25
26
     (defun +mpd-mpc-update ()

```
(map! :leader :prefix ("l" . "custom")
           (:when (modulep! :app emms)
2
            :prefix ("m" . "media")
3
            :desc "Playlist go"
                                                  "g" #'emms-playlist-mode-go
            :desc "Add playlist"
                                                 "D" #'emms-add-playlist
            :desc "Toggle random playlist"
                                                 "r" #'emms-toggle-random-playlist
6
            :desc "Add directory"
                                                 "d" #'emms-add-directory
            :desc "Add file"
                                                 "f" #'emms-add-file
9
            :desc "Smart browse"
                                                 "b" #'emms-smart-browse
            :desc "Play/Pause"
                                                  "p" #'emms-pause
10
            :desc "Start"
                                                  "S" #'emms-start
11
            :desc "Stop"
                                                 "s" #'emms-stop))
```

Then we add MPD related keybindings if MPD is used.

7.7.5 Cycle song information in mode line

I found a useful package named emms-mode-line-cycle which permits to do this; however, it has not been updated since a while, it uses some obsolete functions to draw icon in mode line, so I forked it, got rid of the problematic parts, and added some minor stuff.

```
(package! emms-mode-line-cycle
:recipe (:host github
:repo "abougouffa/emms-mode-line-cycle"))
```

```
(use-package! emms-mode-line-cycle
1
2
       :after emms
       (setq emms-mode-line-cycle-max-width 15
4
             emms-mode-line-cycle-additional-space-num 4
             emms-mode-line-cycle-any-width-p nil
6
             emms-mode-line-cycle-velocity 4)
       ;; Some music files do not have metadata, by default, the track title
9
10
       ;; will be the full file path, so, if I detect what seems to be an absolute
       ;; path, I trim the directory part and get only the file name.
11
       (setq emms-mode-line-cycle-current-title-function
12
             (lambda ()
               (let ((name (emms-track-description (emms-playlist-current-selected-track))))
14
                 (if (file-name-absolute-p name) (file-name-base name) name))))
15
```

7.8 Maxima 7 APPLICATIONS

```
;; Mode line formatting settings
17
       ;; This format complements the 'emms-mode-line-format' one.
18
       (setq emms-mode-line-format " %s " ;;
19
             ;; To hide the playing time without stopping the cycling.
20
             emms-playing-time-display-format "")
21
22
       (defun +emms-mode-line-toggle-format-hook ()
23
          "Toggle the 'emms-mode-line-fotmat' string, when playing or paused."
24
         (setq emms-mode-line-format (concat " " (if emms-player-paused-p " " " ") " %s "))
25
26
          ;; Force a sync to get the right song name over MPD in mode line
         (when MPD-P (emms-player-mpd-sync-from-mpd))
27
          ;; Trigger a forced update of mode line (useful when pausing)
28
         (emms-mode-line-alter-mode-line))
29
30
            ;; Hook the function to the 'emms-player-paused-hook'
31
       (add-hook 'emms-player-paused-hook '+emms-mode-line-toggle-format-hook)
32
33
34
       (emms-mode-line-cycle 1))
```

7.8 Maxima

The Maxima CAS cames bundled with three Emacs modes: maxima, imaxima and emaxima; installed by default in "/usr/share/emacs/site-lisp/maxima".

7.8.1 Maxima

The emacsmirror/maxima seems more up-to-date, and supports completion via Company, so let's install it from GitHub. Note that, normally, we don't need to specify a recipe; however, installing it directly seems to not install company-maxima.el and poly-maxima.el.

```
package! maxima
processes in the second second
```

```
(use-package! maxima
1
2
       :when MAXIMA-P
       :commands (maxima-mode maxima-inferior-mode maxima)
3
4
       (require 'straight) ;; to use `straight-build-dir' and `straight-base-dir'
5
       (setq maxima-font-lock-keywords-directory ;; a workaround to undo the straight workaround!
6
             (expand-file-name (format "straight/%s/maxima/keywords" straight-build-dir) straight-base-dir))
       ;; The `maxima-hook-function' setup `company-maxima'.
9
       (add-hook 'maxima-mode-hook #'maxima-hook-function)
10
11
       (add-hook 'maxima-inferior-mode-hook #'maxima-hook-function)
       (add-to-list 'auto-mode-alist '("\\.ma[cx]\\'" . maxima-mode)))
12
```

7.8.2 IMaxima

For the imaxima (Maxima with image support), the emacsattic/imaxima seems outdated compared to the imaxima package of the official Maxima distribution, so let's install imaxima from the source code of Maxima, hosted on Sourceforge git.code.sf.net/p/maxima/code. The package files are stored in the repository's subdirectory interfaces/emacs/imaxima.

7.9 FriCAS 8 PROGRAMMING

```
;; Use the `imaxima' package bundled with the official Maxima distribution.

(package! imaxima
:recipe (:host nil ;; Unsupported host, we will specify the complete repo link
:repo "https://git.code.sf.net/p/maxima/code"
:files ("interfaces/emacs/imaxima/*")))

(use-package! imaxima
:when MAXIMA-P
:commands (imaxima imath-mode)
:init
(setq imaxima-use-maxima-mode-flag nil ;; otherwise, it don't render equations with LaTeX.
imaxima-scale-factor 2.0)
```

7.9 FriCAS

The FriCAS cames bundled with an Emacs mode, let's load it.

;; Hook the `maxima-inferior-mode' to get Company completion. (add-hook 'imaxima-startup-hook #'maxima-inferior-mode))

```
(use-package! fricas
:when FRICAS-P
:load-path "/usr/lib/fricas/emacs"
:commands (fricas-mode fricas-eval fricas))
```

8 Programming

8.1 File templates

For some file types, we can overwrite the defaults in the snippets' directory.

```
(set-file-template! "\\.tex$" :trigger "__" :mode 'latex-mode)
(set-file-template! "\\.org$" :trigger "__" :mode 'org-mode)
(set-file-template! "/LICEN[CS]E$" :trigger '+file-templates/insert-license)
```

8.2 CSV rainbow

Stolen from here.

```
(after! csv-mode
                                                         ;; TODO: Need to fix the case of two commas, example "a,b,,c,d" % \left( \frac{1}{2}\right) =\frac{1}{2}\left( \frac{1}{2}\right) \left( \frac{1}
     2
                                                        (require 'cl-lib)
                                                        (require 'color)
                                                           (map! :localleader
     6
                                                                                                      :map csv-mode-map
     7
                                                                                                      "R" #'+csv-rainbow)
     9
                                                        (defun +csv-rainbow (&optional separator)
 10
                                                                        (interactive (list (when current-prefix-arg (read-char "Separator: "))))
 11
                                                                        (font-lock-mode 1)
12
 13
                                                                        (let* ((separator (or separator ?\,))
                                                                                                                                 (n (count-matches (string separator) (point-at-bol) (point-at-eol)))
 14
                                                                                                                              (colors (cl-loop for i from 0 to 1.0 by (/ 2.0 n)
15
                                                                                                                                                                                                                                                               collect (apply #'color-rgb-to-hex
                                                                                                                                                                                                                                                                                                                                                                                    (color-hsl-to-rgb i 0.3 0.5)))))
17
                                                                                       (cl-loop for i from 2 to n by 2
18
                                                                                                                                                        for c in colors
```

8.3 Vim 8 PROGRAMMING

```
for r = (format "^\\([^%c\n]+%c\\)\\{%d\\}" separator separator i)
do (font-lock-add-keywords nil `((,r (1 '(face (:foreground ,c))))))))

22
23 ;; provide CSV mode setup
24 ;; (add-hook 'csv-mode-hook (lambda () (+csv-rainbow)))
```

8.3 Vim

```
package! vimrc-mode
recipe (:host github
repo "mcandre/vimrc-mode"))

(use-package! vimrc-mode
recipe (:host github
recipe (:host
```

8.4 ESS

View data frames better with

```
(package! ess-view)
```

8.5 Python IDE

8.6 GNU Octave

Files with the .m extension gets recognized automatically as Objective-C files. I've never used Objective-C before, so let's change it to be recognized as Octave/Matlab files.

8.7 ROS 8 PROGRAMMING

```
(inferior-octave-send-list-and-digest
10
11
              (list (concat (buffer-substring-no-properties (point) opoint)
                            "\n")))
12
             ({\tt mapconcat 'identity inferior-octave-output-list "\n")))))\\
13
     (defun +eros-octave-eval-last-sexp ()
15
       "Wrapper for `+octave-eval-last-sexp' that overlays results."
16
17
        (interactive)
       (eros--eval-overlay
18
19
        (octave-eval-last-sexp)
        (point)))
20
21
     (map! :localleader
            :map (octave-mode-map)
23
            (:prefix ("e" . "eval")
24
            :desc "Eval and print last sexp" "e" #'+eros-octave-eval-last-sexp))
```

8.7 ROS

8.7.1 Extensions

Add ROS specific file formats:

```
(add-to-list 'auto-mode-alist '("\\.rviz\\'" . conf-unix-mode))
(add-to-list 'auto-mode-alist '("\\.urdf\\'" . xml-mode))
(add-to-list 'auto-mode-alist '("\\.xacro\\'" . xml-mode))
(add-to-list 'auto-mode-alist '("\\.launch\\'" . xml-mode))

;; Use gdb-script-mode for msg and srv files
(add-to-list 'auto-mode-alist '("\\.msg\\'" . gdb-script-mode))
(add-to-list 'auto-mode-alist '("\\.srv\\'" . gdb-script-mode))
(add-to-list 'auto-mode-alist '("\\.srv\\'" . gdb-script-mode))
(add-to-list 'auto-mode-alist '("\\.action\\'" . gdb-script-mode))
```

8.7.2 ROS bags

Mode to view ROS .bag files. Taken from code-iai/ros_emacs_utils.

```
(when ROSBAG-P
1
       (define-derived-mode rosbag-view-mode
2
         fundamental-mode "Rosbag view mode"
         "Major mode for viewing ROS bag files."
         (let ((f (buffer-file-name)))
           (let ((buffer-read-only nil))
             (erase-buffer)
7
             (message "Calling rosbag info")
             (call-process "rosbag" nil (current-buffer) nil
                           "info" f)
10
             (set-buffer-modified-p nil))
11
           (view-mode)
12
13
           (set-visited-file-name nil t)))
14
       ;; rosbaq view mode
15
       (add-to-list 'auto-mode-alist '("\\.bag$" . rosbag-view-mode)))
```

8.7.3 ros.el

I found this awesome ros.el package made by Max Beutelspacher, which facilitate working with ROS machines, supports ROS1 and ROS2, with local workspaces or remote ones (over Trump!).

8.8 Scheme 8 PROGRAMMING

```
;; `ros.el' depends on `with-shell-interpreter' among other packages
;; See: https://github.com/DerBeutlin/ros.el/blob/master/Cask

(package! with-shell-interpreter)

(package! ros
:recipe (:host github
:repo "DerBeutlin/ros.el"))
```

Now, we configure the ROS1/ROS2 workspaces to work on. But before that, we need to install some tools on the ROS machine, and build the workspace for the first time using colcon build, the repository contains example Docker files for Noetic and Foxy.

```
(use-package! ros
1
2
       :init
       (map! :leader
3
             :prefix ("1" . "custom")
4
             :desc "Hydra ROS" "r" #'hydra-ros-main/body)
       :commands (hydra-ros-main/body ros-set-workspace)
6
7
       :config
       (setq ros-workspaces
             (list (ros-dump-workspace
9
                     :tramp-prefix (format "/docker:%s@%s:" "ros" "ros-machine")
10
11
                     :workspace "~/ros_ws"
                     :extends '("/opt/ros/noetic/"))
12
13
                    (ros-dump-workspace
                     :tramp-prefix (format "/ssh:%s0%s:" "swd_sk" "172.16.96.42")
14
                     :workspace "~/ros_ws"
15
                     :extends '("/opt/ros/noetic/"))
                    (ros-dump-workspace
17
                     :tramp-prefix (format "/ssh:%s0%s:" "swd_sk" "172.16.96.42")
18
                     :workspace "~/ros2_ws"
19
                     :extends '("/opt/ros/foxy/")))))
20
```

8.8 Scheme

```
(after! geiser
(setq geiser-default-implementation 'guile
geiser-chez-binary "chez-scheme")) ;; default is "scheme"
```

8.9 Embedded systems

8.9.1 Embed.el

Some embedded systems development tools.

TODO: Try to integrate embedded debuggers adapters with dap-mode:

- probe-rs-debugger
- stm32-emacs
- cortex-debug with potential integration with DAP
- esp-debug-adapter

8.10 Debugging 8 PROGRAMMING

```
(use-package! embed
       :commands (embed-openocd-start
2
3
                  embed-openocd-stop
                  embed-openocd-gdb
4
                  embed-openocd-flash)
5
6
       :init
       (map! :leader :prefix ("l" . "custom")
             (:when (modulep! :tools debugger +lsp)
              :prefix ("e" . "embedded")
10
              :desc "Start OpenOCD"
                                        "o" #'embed-openocd-start
11
              :desc "Stop OpenOCD"
                                        "O" #'embed-openocd-stop
12
              :desc "OpenOCD GDB"
                                        "g" #'embed-openocd-gdb
13
                                        "f" #'embed-openocd-flash)))
              :desc "OpenOCD flash"
```

8.9.2 Arduino

8.9.3 Bitbake (Yocto)

Add support for Yocto Project files.

```
(package! bitbake-modes
:recipe (:host bitbucket
:repo "olanilsson/bitbake-modes"))
```

```
(use-package! bitbake-modes
ccommands (wks-mode
mmm-mode
bb-sh-mode
bb-scc-mode
bitbake-mode
conf-bitbake-mode
bitbake-mode
bitbake-mode
bitbake-mode
bitbake-mode
bitbake-mode
bitbake-task-log-mode))
```

8.10 Debugging

8.10.1 DAP

I like to use cpptools over webfreak.debug. So I enable it after loading dap-mode. I like also to have a mode minimal UI. And I like to trigger dap-hydra when the program hits a break point, and automatically delete the session and close Hydra when DAP is terminated.

```
(unpin! dap-mode)
```

```
(after! dap-mode
;; Set latest versions
(setq dap-cpptools-extension-version "1.11.5")
(require 'dap-cpptools)

(setq dap-codelldb-extension-version "1.7.4")

          (set-window-buffer nil (current-buffer))))
29
```

Doom store Doom Emacs stores session information persistently using the core store mechanism. However, relaunching a new session doesn't overwrite the last stored session, to do so, I define a helper function to clear data stored in the "+debugger" location. (see +debugger--get-last-config function.)

```
(defun +debugger/clear-last-session ()
    "Clear the last stored session"
    (interactive)
(doom-store-clear "+debugger"))

(map! :leader :prefix ("l" . "custom")
    (:when (modulep! :tools debugger +lsp)
    :prefix ("d" . "debugger")
    :desc "Clear last DAP session" "c" #'+debugger/clear-last-session))
```

8.10.2 RealGUD

For C/C++, DAP mode is missing so much features. In my experience, both cpptools and gdb DAP interfaces aren't mature, it stops and disconnect while debugging, making it a double pain.

Additional commands There is no better than using pure GDB, it makes debugging extremely flexible. Let's define some missing GDB commands, add them to Hydra keys, and define some reverse debugging commands for usage with rr (which we can use by substituting gdb by rr replay when starting a debug session).

```
(after! realgud
       (require 'hydra)
2
3
        ;; Add some missing gdb/rr commands
4
       (defun +realgud:cmd-start (arg)
5
          "start = break main + run"
6
          (interactive "p")
          (realgud-command "start"))
8
9
       (defun +realgud:cmd-reverse-next (arg)
10
          "Reverse next"
11
          (interactive "p")
12
13
          (realgud-command "reverse-next"))
14
15
        (defun +realgud:cmd-reverse-step (arg)
          "Reverse step"
16
          (interactive "p")
17
```

```
(realgud-command "reverse-step"))
18
19
       (defun +realgud:cmd-reverse-continue (arg)
20
21
         "Reverse continue"
         (interactive "p")
22
         (realgud-command "reverse-continue"))
23
24
       (defun +realgud:cmd-reverse-finish (arg)
25
         "Reverse finish"
26
         (interactive "p")
27
         (realgud-command "reverse-finish"))
28
29
       ;; Define a hydra binding
30
       (defhydra realgud-hydra (:color pink :hint nil :foreign-keys run)
31
32

Additional debuggers for RealGUD

8.10.3 GDB

Emacs GDB a.k.a. gdb-mi DAP mode is great, however, it is not mature for C/C++ debugging, it does not support some basic features like Run until cursor, Show disassembled code, etc. Emacs have builtin gdb support through gdb-mi and gud-gdb.

The emacs-gdb package overwrites the builtin gdb-mi, it is much faster (thanks to it's C module), and it defines some easy to use UI, with Visual Studio like keybindings.

```
(use-package! gdb-mi
        :init
2
        (fmakunbound 'gdb)
3
        (fmakunbound 'gdb-enable-debug)
4
        :config
6
        ({\tt setq}\ {\tt gdb-window-setup-function}\ {\tt \#'gdb--setup-windows}\ {\tt ;;}\ {\tt TODO:}\ {\tt Customize}\ {\tt this}
              gdb-ignore-gdbinit nil) ;; I use gdbinit to define some useful stuff
9
        :: History
        (defvar +gdb-history-file "~/.gdb_history")
10
        (defun +gud-gdb-mode-hook-setup ()
11
          "GDB setup.'
12
13
          ;; Suposes "~/.gdbinit" contains:
14
15
          ;; set history save on
          ;; set history filename ~/.gdb_history
16
          ;; set history remove-duplicates 2048
17
          (when (and (ring-empty-p comint-input-ring)
19
                      (file-exists-p +gdb-history-file))
            (setq comint-input-ring-file-name +gdb-history-file)
20
            (comint-read-input-ring t)))
```

```

8.10.4 WIP launch. json support for GUD and RealGUD

I do a lot of development on C/C++ apps that gets data from command line arguments, which means I have to type my arguments manually after calling realgud:gdb, which is very annoying.

For DAP mode, there is a support for either dap-debug-edit-template, or launch.json. For RealGUD though, I didn't find any ready-to-use feature like this. So let's code it!

I like to define a parameter list named +realgud-debug-config to use as a fallback, if no launch.json file is present, this variable can be set in .dir-locals.el for example.

```
;; A variable which to be used in .dir-locals.el, formatted as a property list;
;; '(:program "..." :args ("args1" "arg2" ...))

(defvar +realgud-debug-config nil)
```

The +realgud-debug-config variable supports two parameters: :program and :args. The first is a string of the program path, and the second is a list of string arguments to pass to the program. It can be set in a per-project basis thanks to .dir-locals.el, something like this:

The list of implemented special variables are listed in the table below, they have been defined as specified in VS Code.

Variable	Example
userHome	/home/username
workspaceFolder	/home/username/your-project
workspaceFolderBasename	your-project
file	/home/username/your-project/folder/file.cc
fileWorkspaceFolder	/home/username/your-project
relativeFile	folder/file.cc
${\tt relativeFileDirname}$	folder
fileBasename	file.cc
${\tt fileBasenameNoExtension}$	file
fileDirname	/home/username/your-project/folder
fileExtname	.cc
lineNumber	Line number of the cursor
selectedText	Text selected in your code editor
pathSeparator	Returns / on *nix, and \setminus on Windows

If a launch.json file is detected in the project directory, it gets read and searches for a configuration for the realgud:gdb debugger. So you need to have a section with type realgud:gdb. This is an example of a valid launch.json file.

```
{
       "version": "0.2.0",
2
3
       "configurations": [
4
            "name": "Emacs::RealGUD:GDB (view_trajectory)",
5
6
            "type": "realgud:gdb",
            "request": "launch",
7
            "dap-compilation": "cmake --build build/debug -- -j 8",
8
            "dap-compilation-dir": "${workspaceFolder}",
9
            "program": "${workspaceFolder}/build/debug/bin/view_trajectory",
10
            "args": [
11
              "htraj=${workspaceFolder}/data/seq1/h_poses.csv",
12
              "traj=${workspaceFolder}/data/seq1/poses.csv"
13
           ],
14
            "stopAtEntry": false,
15
            "cwd": "${workspaceFolder}",
16
            "environment": [],
17
            "externalConsole": false
18
19
         }
       ]
20
21
     }
```

The example above defines several parameters, however, only type, program and args are used at the moment.

```

```

Org basics

Babel I also like the :comments header-argument, so let's make that a default.

```
(setq org-babel-default-header-args
1
           '((:session . "none")
2
             (:results
                        . "replace")
             (:exports
                        . "code")
4
                         . "no")
             (:cache
5
                         . "no")
             (:noweb
             (:hlines
                         . "no")
7
                         . "no")
             (:tangle
             (:comments . "link")))
```

Babel is really annoying when it comes to working with Scheme (via Geiser), it keeps asking about which Scheme implementation to use, I tried to set this as a local variable (using) and .dir-locals.el, but it didn't work. This hack should solve the problem now!

```
;; stolen from https://github.com/yohan-pereira/.emacs#babel-config
(defun +org-confirm-babel-evaluate (lang body)
(not (string= lang "scheme"))) ;; Don't ask for scheme

(setq org-confirm-babel-evaluate #'+org-confirm-babel-evaluate)
```

EVIL There also seem to be a few keybindings which use hjkl, but miss arrow key equivalents.

```

Calendar

Google calendar (org-gcal) I store my org-gcal configuration privately, it contains something like this:

```
(setq org-gcal-client-id "<SOME_ID>.apps.googleusercontent.com"
    org-gcal-client-secret "<SOME_SECRET>"
    org-gcal-fetch-file-alist '(("<USERNAME>@gmail.com" . "~/Dropbox/Org/gcal-agenda.org")))
```

```
(after! org-gcal (load! "lisp/private/+org-gcal.el"))
```

TODO CalDAV Need to be configured, see the GitHub repo.

```
1 (use-package! caldav :commands (org-caldav-sync))
```

Capture Set capture files

```
(setq +org-capture-emails-file (expand-file-name "inbox.org" org-directory)
+org-capture-todo-file (expand-file-name "inbox.org" org-directory)
+org-capture-projects-file (expand-file-name "projects.org" org-directory))
```

Let's set up some org-capture templates, and make them visually nice to access.

```
(use-package! doct
commands (doct))
```

```
(after! org-capture

21
     TABLE is the alist which should contain entries where the car is a string.
22
     There should be two types of entries.
23
24
     1. prefix descriptions like (\"a\" \"Description\")
25
        This indicates that `a' is a prefix key for multi-letter selection, and
26
27
        that there are entries following with keys like \"ab\", \"ax\"...
28
29
     2. Select-able members must have more than two elements, with the first
        being the string of keys that lead to selecting it, and the second a
30
        short description string of the item.
31
32
     The command will then make a temporary buffer listing all entries
33
34
     that can be selected with a single key, and all the single key
     prefixes. When you press the key for a single-letter entry, it is selected.
35
     When you press a prefix key, the commands (and maybe further prefixes)
36
37
     under this key will be shown and offered for selection.
38
39
     TITLE will be placed over the selection in the temporary buffer,
     PROMPT will be used when prompting for a key. SPECIALS is an
40
     alist with (\"key\" \"description\") entries. When one of these
41
42
     is selected, only the bare key is returned."

```

The org-capture bin is rather nice, but I'd be nicer with a smaller frame, and no modeline.

Roam Org-roam is nice by itself, but there are so *extra* nice packages which integrate with it.

```
(setq org-roam-directory "~/Dropbox/Org/slip-box")
(setq org-roam-db-location (expand-file-name "org-roam.db" org-roam-directory))
```

Basic settings

That said, if the directory doesn't exist we likely don't want to be using roam. Since we don't want to trigger errors (which will happen as soon as roam tries to initialize), let's not load roam.

```
(package! org-roam
    :disable t)
```

Mode line file name All those numbers! It's messy. Let's adjust this similarly that I have in the window title

Org Roam Capture template

Snippet Helpers I often want to set src-block headers, and it's a pain to:

- type them out
- remember what the accepted values are
- oh, and specifying the same language again and again

We can solve this in three steps:

- having one-letter snippets, conditioned on (point) being within a src header
- creating a nice prompt showing accepted values and the current default
- pre-filling the src-block language with the last language used

For header args, the keys I'll use are:

```
r for :resultse for :exportsv for :evals for :session
```

• d for :dir

```
(defun +yas/org-src-header-p ()

38
```

Translate capital keywords to lower case Everyone used to use #+CAPITAL keywords. Then people realised that #+lowercase is actually both marginally easier and visually nicer, so now the capital version is just used in the manual.

Org is standardized on lower case. Uppercase is used in the manual as a poor man's bold, and supported for historical reasons. — Nicolas Goaziou

```
(defun +org-syntax-convert-keyword-case-to-lower ()
1
       "Convert all #+KEYWORDS to #+keywords."
2
       (interactive)
       (save-excursion

           (while (re-search-forward "^[ \t]*#\t=" nil t)
             (unless (s-matches-p "RESULTS" (match-string 0))
               (replace-match (downcase (match-string 0)) t)
10
               (setq count (1+ count))))
           (message "Replaced %d occurances" count))))
12
```

Org notifier Add support for org-wild-notifier.

```
(use-package! org-wild-notifier
:hook (org-load . org-wild-notifier-mode)
:config
(setq org-wild-notifier-alert-time '(60 30)))
```

```
(use-package! org-menu
commands (org-menu)
cinit
(map! :localleader
cmap org-mode-map
cdesc "Org menu" "M" #'org-menu))
```

Org menu

9.2.3 Custom links

Sub-figures This defines a new link type **subfig** to enable exporting sub-figures to LATEX, taken form "Export subfigures to LATEX (and HTML)".

```
(org-link-set-parameters
2
      "subfig"
      :follow (lambda (file) (find-file file))
3
      :face '(:foreground "chocolate" :weight bold :underline t)
      :display 'full
      :export
6
      (lambda (file desc backend)
        (when (eq backend 'latex)
          (if (string-match ">(\\(.+\\))" desc)
9
              (concat "\\begin{subfigure}[b]"
10
                      "\caption{" (replace-regexp-in-string "\s+>(.+)" "" desc) "}"
11
                      "\\includegraphics" "[" (match-string 1 desc) "]" "{" file "}" "\\end{subfigure}")
12
            (format "\begin{subfigure}\\includegraphics{%s}\\end{subfigure}" desc file)))))
```

Example of usage:

```
#+caption: Lorem impsum dolor
#+attr_latex: :options \centering
#+begin_figure
[[subfig:img1.jpg][Caption of img1 >(width=.3\textwidth)]]

[[subfig:img2.jpg][Caption of img2 >(width=.3\textwidth)]]

[[subfig:img3.jpg][Caption of img3 >(width=.6\textwidth)]]
#+end_figure
```

IATEX inline markup Needs to make a ?, with this hack you can write [[latex:textsc][Some text]].

```
(org-add-link-type
  "latex" nil
(lambda (path desc format)
(cond
((eq format 'html)
(format "<span class=\"%s\">%s</span>" path desc))
((eq format 'latex)
(format "\\%s{%s}" path desc)))))
```

9.2.4 Visuals

Here I try to do two things: improve the styling of the various documents, via font changes etc., and also propagate colours from the current theme.

Font display

Headings Let's make the title and the headings a bit bigger:

```
(custom-set-faces!
    '(org-document-title :height 1.2))

(custom-set-faces!
    '(outline-1 :weight extra-bold :height 1.25)
    '(outline-2 :weight bold :height 1.15)
    '(outline-3 :weight bold :height 1.12)
```

```
'(outline-4 :weight semi-bold :height 1.09)

(outline-5 :weight semi-bold :height 1.06)

(outline-6 :weight semi-bold :height 1.03)

(outline-8 :weight semi-bold)

(outline-9 :weight semi-bold)
```

Deadlines It seems reasonable to have deadlines in the error face when they're passed.

```
(setq org-agenda-deadline-faces
('(1.001 . error)
(1.000 . org-warning)
(0.500 . org-upcoming-deadline)
(0.000 . org-upcoming-distant-deadline)))
```

Font styling We can then have quote blocks stand out a bit more by making them *italic*.

```
(setq org-fontify-quote-and-verse-blocks t)
```

While org-hide-emphasis-markers is very nice, it can sometimes make edits which occur at the border a bit more fiddley. We can improve this situation without sacrificing visual amenities with the org-appear package.

```
(setq org-inline-src-prettify-results '(" " . " ")
doom-themes-org-fontify-special-tags nil)
```

Inline blocks

```
(use-package! org-modern
1
2
      :hook (org-mode . org-modern-mode)
      :config
3
      4
            org-modern-table-vertical 5
            org-modern-table-horizontal 2
6
            org-modern-list '((43 . "") (45 . "-") (42 . "•"))
            org-modern-footnote (cons nil (cadr org-script-display))
8
            org-modern-priority t

LATEX fragments

Prettier highlighting First off, we want those fragments to look good.

```
(setq org-highlight-latex-and-related '(native script entities))
(require 'org-src)
(add-to-list 'org-src-block-faces '("latex" (:inherit default :extend t)))
```

Prettier rendering Since we can, instead of making the background color match the default face, let's make it transparent.

```
(\verb"setq" org-format-latex-options")
1
            (plist-put org-format-latex-options :background "Transparent"))
2
3
     ;; Can be dvipng, dvisvgm, imagemagick
     (setq org-preview-latex-default-process 'dvisvgm)
5
6
     ;; Define a function to set the format latex scale (to be reused in hooks)
     (defun +org-format-latex-set-scale (scale)
8
       (setq org-format-latex-options (plist-put org-format-latex-options :scale scale)))
9
10
     ;; Set the default scale
11
12
     (+org-format-latex-set-scale 1.4)
13
     ;; Increase scale in Zen mode
14
15
     (when (modulep! :ui zen)
       (add-hook! 'writeroom-mode-enable-hook (+org-format-latex-set-scale 2.0))
16
       (add-hook! 'writeroom-mode-disable-hook (+org-format-latex-set-scale 1.4)))
17
```

Better equation numbering Numbered equations all have (1) as the number for fragments with vanilla org-mode. This code (from scimax) injects the correct numbers into the previews, so they look good.

This hack is not properly working right now!, it seems to work only with align blocks. **NEEDS** INVESTIGATION.

9.2.6 Exporting

General settings By default, Org only exports the first three levels of headings as *headings*, the rest is considered as paragraphs. Let's increase this to 5 levels.

```
(setq org-export-headline-levels 5)
```

Let's make use of the :ignore: tag from ox-extra, which provides a way to ignore exporting a heading, while exporting the content residing under it (different from :noexport:).

```
(require 'ox-extra)
(ox-extras-activate '(ignore-headlines))

(setq org-export-creator-string
(format "Made with Emacs %s and Org %s" emacs-version (org-release)))
```

IATEX export

```
;; `org-latex-compilers' contains a list of possible values for the `%latex' argument.

(setq org-latex-pdf-process
'("latexmk -shell-escape -pdf -quiet -f -%latex -interaction=nonstopmode -output-directory=%o %f"))
```

Compiling

```
;; 'svg' package depends on inkscape, imagemagik and ghostscript
(when (+all (mapcar 'executable-find '("inkscape" "magick" "gs")))
(add-to-list 'org-latex-packages-alist '("" "svg")))

(add-to-list 'org-latex-packages-alist '("svgnames" "xcolor"))
;; (add-to-list 'org-latex-packages-alist '("" "fontspec")) ;; for xelatex
;; (add-to-list 'org-latex-packages-alist '("utf8" "inputenc"))
```

Org LATEX packages

Export PDFs with syntax highlighting This is for code syntax highlighting in export. You need to use -shell-escape with latex, and install the python-pygments package.

```
;; Should be configured per document, as a local variable
     ;; (setq org-latex-listings 'minted)
2
     ;;\ (add-to-list\ 'org-latex-packages-alist\ '(""\ "minted"))
3
     ;; Default `minted` options, can be overwritten in file/dir locals
5
6
     ({\tt setq} \ {\tt org-latex-minted-options}

Class templates

Export multi-files Org documents Let's say we have a multi-files document, with main.org as the entry point. Supposing a document with a structure like this:

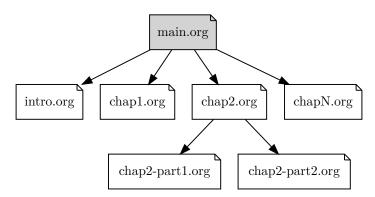

Figure 1: Example of a multi-files document structure

Files intro.org, chap1.org, ... are included in main.org using the Org command. In such a setup, we will spend most of our time writing in a chapter files, and not the main.org, where when want to export the document, we would need to open the top-level file main.org before exporting.

A quick solution is to admit the following convention:

If a file named main.org is present beside any other Org file, it should be considered as the entry point; and whenever we export to PDF (from any of the Org files like: intro.org, chap1.org, ...), we automatically jump to the main.org, and run the export there.

This can be achieved by adding an Emacs-Lisp *advice* around the (org-latex-export-to-pdf) to switch to main.org (if it exists) before running the export.

You can also set the variable +org-export-to-pdf-main-file to the main file, in .dir-locals.el or as a file local variable.

9.3 Text editing 9 OFFICE

```
(defvar +org-export-to-pdf-main-file nil
       "The main (entry point) Org file for a multi-files document.")
2
3
4
     (advice-add
      'org-latex-export-to-pdf :around
5
6
      (lambda (orig-fn &rest orig-args)
        (message
7
         "PDF exported to: %s."
8
         (let ((main-file (or (bound-and-true-p +org-export-to-pdf-main-file) "main.org")))
9
           (if (file-exists-p (expand-file-name main-file))
10
11
               (with-current-buffer (find-file-noselect main-file)
                 (apply orig-fn orig-args))
12
             (apply orig-fn orig-args))))))
13
```

Hugo Update files with last modified date, when #+lastmod: is available

```
(setq time-stamp-active t
    time-stamp-start "#\\+lastmod:[\t]*"
time-stamp-end "$"
time-stamp-format "%04Y-%02m-%02d")

(add-hook 'before-save-hook 'time-stamp nil)
(setq org-hugo-auto-set-lastmod t)
```

9.3 Text editing

9.3.1 Plain text

It's nice to see ANSI color codes displayed. However, until Emacs 28 it's not possible to do this without modifying the buffer, so let's condition this block on that.

```
(after! text-mode
(add-hook! 'text-mode-hook
(unless (derived-mode-p 'org-mode)
;; Apply ANSI color codes
(with-silent-modifications
(ansi-color-apply-on-region (point-min) (point-max) t)))))
```

9.3.2 Academic phrases

When writing your academic paper, you might get stuck trying to find the right phrase that captures your intention. This package tries to alleviate that problem by presenting you with a list of phrases organized by the topic or by the paper section that you are writing. This package has around 600 phrases so far.

This is based on the book titled "English for Writing Research - Papers Useful Phrases".

```
(use-package! academic-phrases
2 :commands (academic-phrases
3 academic-phrases-by-section))
```

9.3.3 Quarto

Integration of Quarto in Emacs.

```
(package! quarto-mode)
```

```
(use-package! quarto-mode
:when QUARTO-P)
```

9.3.4 French apostrophes

```
(defun +helper--in-buffer-replace (old new)
       "Replace OLD with NEW in the current buffer."
       (save-excursion
3
         (goto-char (point-min))
4
         (let ((case-fold-search nil)
               (cnt 0))
6
            (while (re-search-forward old nil t)
             (replace-match new)
             (setq cnt (1+ cnt)))
9
10
           cnt)))
11
     (defun +helper-clear-frenchy-ponctuations ()
12
13
       "Replace french apostrophes (') by regular quotes (')."
       (interactive)
14
       (let ((chars '((" " . "") ("'" . "'")))
15
             (cnt 0))
16
         (dolist (pair chars)
17
           (setq cnt (+ cnt (+helper--in-buffer-replace (car pair) (cdr pair)))))
         (message "Replaced %d matche(s)." cnt)))
19
```

9.3.5 Yanking multi-lines paragraphs

```
(defun +helper-paragraphized-yank ()
       "Copy, then remove newlines and Org styling (/*_~)."
       (interactive)
3
       (copy-region-as-kill nil nil t)
       (with-temp-buffer
         (yank)
6
         ;; Remove newlines, and Org styling (/*_~) \,
         (goto-char (point-min))
         (let ((case-fold-search nil))
9
           (while (re-search-forward "[\n/*_{-}]" nil t)
10
             (replace-match (if (s-matches-p (match-string 0) "\n") " " "") t)))
11
         (kill-region (point-min) (point-max))))
12
13
     (map! :localleader
14
           :map (org-mode-map markdown-mode-map latex-mode-map text-mode-map)
15
            :desc "Paragraphized yank" "y" #'+helper-paragraphized-yank)
```

10 System configuration

10.1 Mime types

10.1.1 Org mode files

Org mode isn't recognized as its own mime type by default, but that can easily be changed with the following file. For system-wide changes try /usr/share/mime/packages/org.xml.

```
cmime-info xmlns='http://www.freedesktop.org/standards/shared-mime-info'>
cmime-type type="text/org">
comment>Emacs Org-mode File</comment>
cglob pattern="*.org"/>
calias type="text/org"/>
```

```
6 </mime-type>
7 </mime-info>
```

What's nice is that Papirus now has an icon for text/org. One simply needs to refresh their mime database:

```
update-mime-database ~/.local/share/mime
```

Then set Emacs as the default editor:

```
xdg-mime default emacs-client.desktop text/org
```

10.1.2 Registering org-protocol://

The recommended method of registering a protocol is by registering a desktop application, which seems reasonable.

```
[Desktop Entry]
Name=Emacs Org-Protocol
Exec=emacsclient %u
Icon=/home/hacko/.doom.d/assets/org-mode.svg
Type=Application
Terminal=false
MimeType=x-scheme-handler/org-protocol
```

To associate org-protocol:// links with the desktop file:

```
xdg-mime default org-protocol.desktop x-scheme-handler/org-protocol
```

10.1.3 Configuring Chrome/Brave

As specified in the official documentation, we would like to invoke the org-protocol:// without confirmation. To do this, we need to add this system-wide configuration.

```
read -p "Do you want to set Chrome/Brave to show the 'Always open ...' checkbox, to be used with the
1
         'org-protocol://' registration? [Y | N]: " INSTALL_CONFIRM
2
     if [[ "$INSTALL_CONFIRM" == "Y" ]]
4
       sudo mkdir -p /etc/opt/chrome/policies/managed/
5
6
       sudo tee /etc/opt/chrome/policies/managed/external_protocol_dialog.json > /dev/null <<'EOF'</pre>
7
       "ExternalProtocolDialogShowAlwaysOpenCheckbox": true
       }
10
11
     EOF
12
       \verb|sudo| chmod| 644 / etc/opt/chrome/policies/managed/external_protocol_dialog.json|
13
     fi
14
```

Then add a bookmarklet in your browser with this code:

```
javascript:location.href =
    'org-protocol://roam-ref?template=r&ref='
    + encodeURIComponent(location.href)
4    + '&title='
5    + encodeURIComponent(document.title)
6    + '&body='
7    + encodeURIComponent(window.getSelection())
```

10.2 Git

10.2.1 Git diffs

Based on this gist and this article.

```
*.tex
                                      diff=tex
2
     *.bib

10.2.2 Apache Tika App wrapper

Apache Tika is a content detection and analysis framework. It detects and extracts metadata and text from over a thousand different file types. We will be using the Tika App in command-line mode to show some meaningful diff information for some binary files.

First, let's add a custom script to run tika-app:

```
#!/bin/sh
APACHE_TIKA_JAR="$HOME/.local/share/tika/tika-app.jar"

if [ -f "${APACHE_TIKA_JAR}" ]
then
exec java -Dfile.encoding=UTF-8 -jar "${APACHE_TIKA_JAR}" "$@" 2>/dev/null
else
echo "JAR file not found at ${APACHE_TIKA_JAR}"

fi
```

Add tika's installation instructions to the setup.sh file.

```
1
     update_apache_tika () {
       TIKA_JAR_PATH="$HOME/.local/share/tika"
3
       if [ ! -d "${TIKA_JAR_PATH}" ]
5
        mkdir -p "${TIKA_JAR_PATH}"
6
8
       TIKA_BASE_URL=https://archive.apache.org/dist/tika/
9
       TIKA_JAR_LINK="${TIKA_JAR_PATH}/tika-app.jar"
10
11
12
       echo -n "Checking for new Apache Tika App version..."
13
       # Get the lastest version
14
15
       TIKA VERSION=$(
        curl -s "${TIKA_BASE_URL}" | # Get the page
16
        {\tt pandoc \ -f \ html \ -t \ plain \ | \ \textit{\# Convert HTML page to plain text}}.
17
        18
         \hookrightarrow X.X.X/)
        sort -rV | # Sort versions, the newest first
19
        head -n 1 # Get the first (newest) version
20
21
22
       if [ -z "${TIKA_VERSION}" ]
23
24
25
        echo "Failed, check your internet connection."
        exit 1
26
27
       fi
28
       echo "Lastest version is ${TIKA VERSION}"
29
30
       TIKA_JAR="${TIKA_JAR_PATH}/tika-app-${TIKA_VERSION}.jar"
31
       TIKA_JAR_URL="${TIKA_BASE_URL}${TIKA_VERSION}/tika-app-${TIKA_VERSION}.jar"
32
```

```
33
       if [ ! -f "${TIKA_JAR}" ]
34
       then
35
         echo "New version available!"
36
         read -p "Do you want to download Apache Tika App v${TIKA_VERSION}? [Y | N]: " INSTALL_CONFIRM
37
         if [[ "$INSTALL_CONFIRM" == "Y" ]]
38
39
           curl -o "${TIKA_JAR}" "${TIKA_JAR_URL}" && echo "Apache Tika App v${TIKA_VERSION} downloaded successfully"
40
         fi
41
42
       else
         echo "Apache Tika App is up-to-date, version ${TIKA_VERSION} already downloaded to '${TIKA_JAR}'"
43
44
45
       # Check the existance of the symbolic link
46
       if [ -L "${TIKA_JAR_LINK}" ]
47
48
         unlink "${TIKA_JAR_LINK}"
49
50
       fi
51
52
       # Create a symbolic link to the installed version
       ln -s "${TIKA_JAR}" "${TIKA_JAR_LINK}"
53
54
55
56
     update_apache_tika;
```

When it detects that Tesseract is installed, Tika App will try to extract text from some file types. For some reason, it tries to use Tesseract with some compressed files like *.bz2, *.apk... etc. I would like to disable this feature by exporting an XML config file which will be used when launching the Tika App (using --config=<tika-config.xml>).

```
cyaml version="1.0" encoding="UTF-8"?>

cyarsers>

cyarser class="org.apache.tika.parser.DefaultParser">

cyarser-exclude class="org.apache.tika.parser.ocr.TesseractOCRParser"/>

cyparser>
cyparser>
cyparser>
```

10.3 Emacs' Systemd daemon

Let's define a Systemd service to launch Emacs server automatically.

```
[Unit]
1
2
     Description=Emacs server daemon
     Documentation=info:emacs man:emacs(1) https://gnu.org/software/emacs/
3
     [Service]
     Type=forking
6
     ExecStart=sh -c 'emacs --daemon && emacsclient -c --eval "(delete-frame)"'
     ExecStop=emacsclient --no-wait --eval "(progn (setq kill-emacs-hook nil) (kill-emacs))"
8
     Restart=on-failure
9
10
11
     WantedBy=default.target
12
```

Which is then enabled by:

```
systemctl --user enable emacs.service
```

For some reason if a frame isn't opened early in the initialization process, the daemon doesn't seem to like opening frames later — hence the && emacsclient part of the ExecStart value.

10.4 Emacs client

10.4.1 Desktop integration

It can now be nice to use this as a 'default app' for opening files. If we add an appropriate desktop entry, and enable it in the desktop environment.

```
[Desktop Entry]
     Name=Emacs (Client)
     GenericName=Text Editor
3
     Comment=A flexible platform for end-user applications
     MimeType=text/english;text/plain;text/org;text/x-makefile;text/x-c++hdr;text/x-c++src;text/x-chdr;text/x-csrc;t |
5
      → ext/x-java;text/x-moc;text/x-pascal;text/x-tcl;text/x-tex;application/x-shellscript;text/x-c;text/x-c++;
     Exec=emacsclient -create-frame --frame-parameters="'(fullscreen . maximized)"
6
     → --alternate-editor="/usr/bin/emacs" --no-wait %F
     Icon=emacs
7
     Type=Application
     Terminal=false
     Categories=TextEditor;Utility;
10
     StartupWMClass=Emacs
11
     Keywords=Text; Editor;
^{12}
     X-KDE-StartupNotify=false
13
```

10.4.2 Command-line wrapper

A wrapper around emacsclient:

- Accepting stdin by putting it in a temporary file and immediately opening it.
- Guessing that the tty is a good idea when \$DISPLAY is unset (relevant with SSH sessions, among other things).
- With a whiff of 24-bit color support, sets TERM variable to a terminfo that (probably) announces 24-bit color support.
- Changes GUI emacsclient instances to be non-blocking by default (--no-wait), and instead take a flag to suppress this behavior (-w).

I would use sh, but using arrays for argument manipulation is just too convenient, so I'll raise the requirement to bash. Since arrays are the only 'extra' compared to sh, other shells like ksh etc. should work too.

```
#!/usr/bin/env bash
1
2
     force_tty=false
     force_wait=false
3
4
     stdin mode="1
     args=()
6
8
     usage () {
       echo -e "Usage: e [-t] [-m MODE] [OPTIONS] FILE [-]
9
10
11
     Emacs client convenience wrapper.
12
     Options:
13
     -h, --help
                             Show this message
14
     -t, -nw, --tty
15
                             Force terminal mode
     -w, --wait
                             Don't supply --no-wait to graphical emacsclient
16
                             Take stdin (when last argument)
17
     -m \texttt{MODE}, --mode \texttt{MODE} \texttt{Mode} to open stdin with
18
     -mm, --maximized
                             Start Emacs client in maximized window
19
20
     Run emacsclient --help to see help for the emacsclient."
21
22
23
24
     while:
```

```
do
25
                 case "$1" in
26
                     -t | -nw | --tty)

85
86
                 emacsclient -create-frame --alternate-editor="/usr/bin/emacs" "${args[@]}"
88
             fi
89
```

Useful aliases Now, to set an alias to use e with magit, and then for maximum laziness we can set aliases for the terminal-forced variants.

```
# Aliases to run emacs+magit
alias magit='e --eval "(progn (magit-status) (delete-other-windows))"'
alias magitt='e -t --eval "(progn (magit-status) (delete-other-windows))"'

# Aliases to run emacs+mu4e
alias emu='e --eval "(progn (=mu4e) (delete-other-windows))"'
alias emut='e -t --eval "(progn (=mu4e) (delete-other-windows))"'
```

And this to launch Emacs in terminal mode et, I use this as a default \$EDITOR

```
1 #!/usr/bin/env bash
2 e -t "$0"
```

And ev for use with \$VISUAL:

```
#!/usr/bin/env bash
e -w "$@"

export EDITOR="$HOME/.local/bin/et"
# export VISUAL=$HOME/.local/bin/ev
```

10.5 LanguageTool server

```
[Unit]
Description=LanguageTool server
Documentation=https://laungaugetool.org

[Service]
Type=simple
ExecStart=languagetool --http --languageModel /usr/share/ngrams
Restart=on-failure

[Install]
WantedBy=default.target
```

Which is then enabled by:

```
systemctl --user enable emacs.service
```

10.6 AppImage

Install/update the appimageupdatetool.AppImage tool:

```
else
10
         if [ -f "${APPIMAGE_UPDATE_TOOL_PATH}" ]
11
         then
12
           echo "Update available, downloading latest ${MACHINE_ARCH} version to ${APPIMAGE_UPDATE_TOOL_PATH}"
13
           mv "${APPIMAGE_UPDATE_TOOL_PATH}" "${APPIMAGE_UPDATE_TOOL_PATH}.backup"
14
         else
15
           echo "${TOOL_NAME} not found, downloading latest ${MACHINE_ARCH} version to ${APPIMAGE_UPDATE_TOOL_PATH}"
16
         fi
17
         wget -0 "${APPIMAGE_UPDATE_TOOL_PATH}" "${APPIMAGE_UPDATE_TOOL_URL}" && # 28>/dev/null
18
19
             echo "Downloaded ${TOOL_NAME}-${MACHINE_ARCH}.AppImage" &&
             [ -f "${APPIMAGE_UPDATE_TOOL_PATH}.backup" ] &&
20
             rm "${APPIMAGE_UPDATE_TOOL_PATH}.backup"
21
         chmod a+x "${APPIMAGE_UPDATE_TOOL_PATH}"
22
23
       fi
24
25
     update_appimageupdatetool;
26
```

10.7 Oh-my-Zsh

10.7.1 Path

Path to your oh-my-zsh installation.

```
export ZSH="$HOME/.oh-my-zsh"
```

10.7.2 Themes and customization:

Set name of the theme to load, if set to "random", it will load a random theme each time oh-myzsh is loaded, in which case, to know which specific one was loaded, run: echo \$RANDOM_THEME See github.com/ohmyzsh/ohmyzsh/wiki/Themes.

10.7.3 Behavior

```
# Uncomment the following line to use case-sensitive completion.
1
     # CASE_SENSITIVE="true"
2
     # Uncomment the following line to use hyphen-insensitive completion.
4
5
     \# Case-sensitive completion must be off. \_ and - will be interchangeable.
     # HYPHEN_INSENSITIVE="true"
6
     # Uncomment the following line to disable bi-weekly auto-update checks.
     # DISABLE_AUTO_UPDATE="true"
9
10
     # Uncomment the following line to automatically update without prompting.
11
     DISABLE_UPDATE_PROMPT="true"
12
13
     # Uncomment the following line to change how often to auto-update (in days).
14
```

```
export UPDATE ZSH DAYS=3
15

     # Uncomment the following line if pasting URLs and other text is messed up.
17
     # DISABLE_MAGIC_FUNCTIONS="true"
18
19
     # Uncomment the following line to disable colors in ls.
20
     # DISABLE_LS_COLORS="true"
^{21}
22
     # Uncomment the following line to disable auto-setting terminal title.
23
     # DISABLE_AUTO_TITLE="true"
24
25
     # Uncomment the following line to enable command auto-correction.
26
27
     # ENABLE_CORRECTION="true"
28
     # Uncomment the following line to display red dots whilst waiting for completion.
29
     # COMPLETION WAITING DOTS="true"
30
31
     \hbox{\it\# Uncomment the following line if you want to disable marking untracked files}
32
     # under VCS as dirty. This makes repository status check for large repositories
33
34
     # much, much faster.
     # DISABLE_UNTRACKED_FILES_DIRTY="true"
35
36
     # Uncomment the following line if you want to change the command execution time
37
38
     # stamp shown in the history command output.
     # You can set one of the optional three formats:
39
40
      \verb| # "mm/dd/yyyy"|"dd.mm.yyyy"|"yyyy-mm-dd"| \\
     # or set a custom format using the strftime function format specifications,
41
     # see 'man strftime' for details.
42
     # HIST_STAMPS="mm/dd/yyyy"
```

10.7.4 Plugins

```
# Would you like to use another custom folder than $ZSH/custom?
1
     ZSH_CUSTOM=$HOME/.config/my_ohmyzsh_customizations
2
     # Which plugins would you like to load?
     # Standard plugins can be found in $ZSH/plugins/
5
     # Custom plugins may be added to $ZSH_CUSTOM/plugins/
     # Example format: plugins=(rails git textmate ruby lighthouse)
7
     # Add wisely, as too many plugins slow down shell startup.
     plugins=(
       zsh-autosuggestions
10
11
       zsh-navigation-tools
       zsh-interactive-cd
12

20
       pip
       rust
21
       repo
22
       git
23
24
       ср
       rsync
25
       ripgrep
26
27
       fzf
       fd
28
29
       z
30
```

10.7.5 Bootstrap Oh-my-Zsh

```
source $ZSH/oh-my-zsh.sh
```

10.7.6 Aliases

```
# Aliases
alias zshconfig="vim ~/.zshrc"
alias ohmyzsh="ranger $ZSH"
```

10.8 Zsh user configuration

10.8.1 pbcopy and pbpaste

I like to define MacOS-like commands (pbcopy and pbpaste) to copy and paste in terminal (from stdin, to stdout). The pbcopy and pbpaste are defined using either xclip or xsel, you would need to install these tools, otherwise we wouldn't define the aliases.

```
# Define aliases to 'pbcopy' and 'pbpaste'
     if command -v xclip &> /dev/null
2
     then
       # Define aliases using xclip
       alias pbcopy='xclip -selection clipboard'
5
       alias pbpaste='xclip -selection clipboard -o'
6
     elif command -v xsel &> /dev/null
9
       # Define aliases using xsel
       alias pbcopy='xsel --clipboard --input'
10
       alias pbpaste='xsel --clipboard --output'
11
12
```

10.8.2 netpaste

Define a netpaste command to paste to a Pastebin server.

```
alias netpaste='curl -F file=@- 0x0.st' # OR 'curl -F f:1=<- ix.io '
```

10.8.3 Sudo GUI!

And then define gsuon and gsuoff aliases to run graphical apps from terminal with root permissions, this requires xhost.

```
# To run GUI apps from terminal with root permissions
if command -v xhost &> /dev/null
then
alias gsuon='xhost si:localuser:root'
alias gsuoff='xhost -si:localuser:root'
fi
```

10.8.4 Neovim

Use Neovim instead of VIM to provide vi and vim commands.

```
# NeoVim
if command -v nvim &> /dev/null
then
alias vim="nvim"
alias vi="nvim"
fi
```

10.8.5 ESP-IDF

Add some aliases to work with the ESP-IDF framework.

```
if [ -d "$HOME/Softwares/src/esp-idf/" ]
1
2
    then
3
      alias esp-prepare-env='source $HOME/Softwares/src/esp-idf/export.sh'
      alias esp-update='echo "Updating ESP-IDF framework..." && cd $HOME/src/esp-idf && git pull --all && echo
4
         "Updated successfully"'
    else
5
      alias esp-prepare-env='echo "esp-idf repo not found. You can clone the esp-idf repo using git clone
6
      → https://github.com/espressif/esp-idf.git"'
      alias esp-update=esp-prepare-env
    fi
```

10.8.6 CLI wttrin client

Define an alias to get weather information for my city:

```
export WTTRIN_CITY=Orsay

alias wttrin='curl wttr.in/$WTTRIN_CITY'

alias wttrin2='curl v2.wttr.in/$WTTRIN_CITY'
```

10.8.7 Minicom

Enable Meta key and colors in minicom:

```
export MINICOM='-m -c on'
```

10.8.8 Rust

Define Rust sources path, and add packages installed from cargo to the PATH.

```
export RUST_SRC_PATH=$HOME/.rustup/toolchains/stable-x86_64-unknown-linux-gnu/lib/rustlib/src/rust/src/export PATH=$PATH:$HOME/.cargo/bin
```

I'm using the AUR package clang-format-static-bin, which provide multiple versions of Clang-format, I use it with some work projects requiring a specific version of Clang-format.

10.8.9 Clang-format

```
export PATH=$PATH:/opt/clang-format-static
```

10.8.10 CMake

Add my manually installed libraries to CMake and PATH.

```
export CMAKE_PREFIX_PATH=$HOME/Softwares/src/install
export PATH=$PATH:$HOME/Softwares/src/install/bin
```

10.8.11 Node

Set NPM installation path to local:

```
NPM_PACKAGES="${HOME}/.npm-packages"

# Export NPM bin path
export PATH="$PATH:$NPM_PACKAGES/bin"

# Preserve MANPATH if you already defined it somewhere in your config.
# Otherwise, fall back to `manpath` so we can inherit from `/etc/manpath`.
export MANPATH="${MANPATH-$(manpath)}:$NPM_PACKAGES/share/man"

# Tell Node about these packages
export NODE_PATH="$NPM_PACKAGES/lib/node_modules:$NODE_PATH"
```

Tell NPM to use this directory for its global package installs by adding this in ~/.npmrc:

```
prefix = ~/.npm-packages
```

Some useful stuff (fzf, opam, Doom Emacs...)

10.8.12 tmux

I like to use tmux by default, even on my local sessions, I like to start a tmux in a default session on the first time I launch a terminal, and then, attach any other terminal to this default session:

```
# If not running inside Emacs (via vterm/eshell...)

if [-z $INSIDE_EMACS]

then

if command -v tmux &> /dev/null && [-z "$TMUX"]

then

tmux attach -t default || tmux new -s default

fi

fi

fi
```

10.8.13 Other stuff

```
# You may need to manually set your language environment
2
     # export LANG=en_US.UTF-8
3
     # Preferred editor for local and remote sessions
4
     # if [[ -n $SSH_CONNECTION ]]; then
         export EDITOR='vim'
6
     # else
         export EDITOR='mvim'
     # fi
9
10
     # Compilation flags
11
     # export ARCHFLAGS="-arch x86_64"
12
13
14
     [ -f ~/.fzf.zsh ] && source ~/.fzf.zsh
15
```

```
# OPAM configuration
[[ ! -r $HOME/.opam/opam-init/init.zsh ]] || source $HOME/.opam/opam-init/init.zsh > /dev/null 2> /dev/null

# Add ~/.config/emacs/bin to path (for DOOM Emacs stuff)
export PATH=$PATH:$HOME/.config/emacs/bin
```

Define some environment variables.

```
export DS_DIR=~/PhD/datasets-no/experiment_images/
export DSO_BIN_DIR=~/PhD/workspace-no/vo/orig/dso/build/release/bin
export DSO_RES_DIR=~/PhD/workspace-no/vo/orig/dso_results
```

Load my bitwarden-cli session, exported to BW_SESSION.

```
source ~/.bitwarden-session
```

10.9 Rust format

For Rust code base, the file \$HOME/.rustfmt.toml contains the global format settings, I like to set it to:

```
# Rust edition 2018
1
     edition = "2018"
2
3
     # Use Unix style newlines, with 2 spaces tabulation.
4
     newline_style = "Unix"
     tab_spaces = 2
6
     hard_tabs = false
     # Make one line functions in a single line
9
10
     fn_single_line = true
11
     # Format strings
12
13
     format_strings = true
14
     # Increase the max line width
15
     max_width = 120
16
17
18
     # Merge nested imports
     merge_imports = true
19
20
^{21}
     # Enum and Struct alignement
     enum_discrim_align_threshold = 20
22
     struct_field_align_threshold = 20
23
24
     # Reorder impl items: type > const > macros > methods.
25
     reorder_impl_items = true
26
27
     # Comments and documentation formating
28
29
     wrap_comments = true
     normalize_comments = true
30
     normalize_doc_attributes = true
31
     format_code_in_doc_comments = true
     report_fixme = "Always"
33
     todo = "Always"
34
```

10.10 eCryptfs

10.10.1 Unlock and mount script

```
#!/bin/sh -e
     # This script mounts a user's confidential private folder
2
3
     # Original by Michael Halcrow, IBM
4
     # Extracted to a stand-alone script by Dustin Kirkland <kirkland@ubuntu.com>
5
6
     # Modified by: Abdelhak Bougouffa <abougouffa@fedoraproject.org>
     # This script:
8
     # * interactively prompts for a user's wrapping passphrase (defaults to their
9
          login passphrase)
10
     # * checks it for validity
11
     # * unwraps a users mount passphrase with their supplied wrapping passphrase
12
     # * inserts the mount passphrase into the keyring
13
     # * and mounts a user's encrypted private folder
14
15
     PRIVATE DIR="Private"
16
     PW_ATTEMPTS=3
17
     MESSAGE=`gettext "Enter your login passphrase:"`
18
19
     if [ -f $HOME/.ecryptfs/wrapping-independent ]
20
21
22
       # use a wrapping passphrase different from the login passphrase
       MESSAGE=`gettext "Enter your wrapping passphrase:"
23
     fi
24
25
     WRAPPED_PASSPHRASE_FILE="$HOME/.ecryptfs/wrapped-passphrase"
26
     MOUNT_PASSPHRASE_SIG_FILE="$HOME/.ecryptfs/$PRIVATE_DIR.sig"
27
28
     # First, silently try to perform the mount, which would succeed if the appropriate
29
30
     # key is available in the keyring
     if /sbin/mount.ecryptfs_private >/dev/null 2>&1
31
     then
32
       exit 0
33
     fi
34
35
     # Otherwise, interactively prompt for the user's password
36
     if [ -f "$WRAPPED_PASSPHRASE_FILE" -a -f "$MOUNT_PASSPHRASE_SIG_FILE" ]

             continue
62
63
           fi
         fi
64
65
       done
66
       if [ $tries -ge $PW_ATTEMPTS ]
67
68
       then
```

```
zenity --error --title "eCryptfs" --text "Too many incorrect password attempts, exiting"
69
70
         exit 1
71
72
       /sbin/mount.ecryptfs_private
73
74
       zenity --error --title "eCryptfs" --text "Encrypted private directory is not setup properly"
75
76
     fi
77
78
     if grep -qs "$HOME/.Private $PWD ecryptfs " /proc/mounts 2>/dev/null; then
79
       zenity --info --title "eCryptfs" --text "Your private directory has been mounted."
80
82
     dolphin "$HOME/Private"
83
     exit 0
```

10.10.2 Desktop integration

```
[Desktop Entry]
Type=Application
Version=1.0
Name=eCryptfs Unlock Private Directory
Icon=unlock
Exec=/home/hacko/.ecryptfs-mount-private-gui
Terminal=False
```

10.11 GDB

10.11.1 Early init

I like to disable the initial message (containing copyright info and other stuff), the right way to do this is either by starting gdb with -q option, or (since GDB v11 I think), by setting in ~/.gdbearlyinit.

```
# GDB early init file
# Abdelhak Bougouffa (c) 2022

# Disable showing the initial message
set startup-quietly
```

10.11.2 Init

GDB loads \$HOME/.gdbinit at startup, I like to define some default options in this file, this is a WIP, but it won't evolve too much, as it is recommended to keep the .gdbinit clean and simple. For the moment, it does just enable pretty printing, and defines the c and n commands to wrap continue and next with a post refresh, which is helpful with the annoying TUI when the program outputs to the stdout.

```
# GDB init file
1
     # Abdelhak Bougouffa (c) 2022
2
     # Save history
4
     set history save on
     set history filename ~/.gdb_history
6
     set history remove-duplicates 2048
     # When debugging my apps, debug information of system libraries
9
     # aren't that important
10
11
     set debuginfod enabled off
12
     # Set pretty print
```

```
set print pretty on
14
15
     skip pending on
16
17
     python
     import os
18
19
     # Add libs here
20
21
     LIB_PATHS = ["/usr/include"]
22
     for lib_path in LIB_PATHS:
23
24
       for root, dirs, files in os.walk(lib_path):
         for file in files:
25
26
           cmd = f"skip file {os.path.join(root, file)}"
           gdb.execute(cmd, True, to_string=True)
27
28
     end
     skip enable
29
30
     skip pending on
31
     guile
32
33
     <<gdb-init-guile>>
34
     end
     skip enable
35
36
37
     # This fixes the annoying neurses TUI gliches and saves typing C-l each time to refresh the screen
     define cc
38
39
       continue
       refresh
40
     end
41
42
     define nn
43
44
       next
       refresh
45
     end
46
```

10.12 GnuPG

I add this to my ~/.gnupg/gpg-agent.conf, to set the time-to-live to one day.

```
# Do not ask me about entered passwords for 24h (during the same session)

default-cache-ttl 86400

max-cache-ttl 86400

# As I'm using KDE, use Qt based pinentry tool instead of default GTK+

pinentry-program /usr/bin/pinentry-qt

# Allow pinentry in Emacs minibuffer (combined with epg-pinentry-mode)

allow-loopback-pinentry

allow-emacs-pinentry
```

10.13 OCR This

```
#!/bin/bash

IMG=$(mktemp -u --suffix=".png")

scrot -s "$IMG" -q 100

mogrify -modulate 100,0 -resize 400% "$IMG"

tesseract "$IMG" - -1 eng 2> /dev/null | xsel -ib
```

10.14 Packages

Here, we install Arch packages

```
check_and_install_pkg () {
       PKG_NAME="$1"
2
       if ! pacman -Qiq ${PKG_NAME} &> /dev/null
3
         echo "Package ${PKG_NAME} is missing, installing it using yay"
5
6
         yay -S ${PKG_NAME}
8
     PKGS_LIST=(mpv mpc mpd vlc)
10
11
12
     for PKG in PKGS_LIST; do
      check_and_install_pkg
13
```

10.15 KDE Plasma

On KDE, there is a good support for HiDPI displays, however, I faced annoying small icons in some contexts (for example, a right click on desktop). This can be fixed by setting PLASMA_USE_QT_SCALING=1 before starting KDE Plasma. KDE sources the files with .sh extension found on ~/.config/plasma-workspace/env, so let's create ours.

```
export PLASMA_USE_QT_SCALING=1
```
