Doom Emacs Configuration

Emacs configuration for work and life!

Abdelhak Bougouffa*

*abougouffa@fedoraproject.org

1   This repository

This repository (abougouffa/dotfiles) contains my configuration files for **Zsh**, **Emacs**, **Vim**, **Alacritty** and other Linux related stuff.

If you want to reuse some of these configurations, you will need to modify some directories and add some user specific information (usernames, passwords…)

This is the main configuration file .doom.d/config.org, (available also as a PDF file, it contains the literal configuration for Doom Emacs, and I use it to generate some other user configuration files (define aliases, environment variables, user tools, Git configuration…).

1.1   How to install

Since commit 55c92810, I'm using **chezmoi** to manage my Dotfiles.

Now the Dotfiles can be installed using the following command; however, I don't recommend to install all of my dotfiles, try instead to adapt them or to copy some interesting chunks.

```
1   sudo pacman -S chezmoi
2   chezmoi init --apply abougouffa
```

1.2   Emacs stuff

To install my Doom Emacs configuration:

- Install Doom Emacs to `~/.config/emacs` or `.emacs.d`:

```
1  git clone https://github.com/doomemacs/doomemacs.git ~/.config/emacs
2
3  ~/.config/emacs/bin/doom install
```

Until 12b3d20e, I was using Chemacs2 to manage multiple Emacs profiles. Since I'm using only Doom Emacs and Doom recently introduced a new feature to bootstrap other Emacs configs, so I switched to a plain Doom Emacs config.

2 Intro

I've been using Linux exclusively since 2010, **GNU Emacs** was always installed on my machine, but I didn't discover the **real** Emacs until 2020, in the beginning, I started my Vanilla Emacs configuration from scratch, but after a while, it becomes a mess. As a new Emacs user, I didn't understand the in the beginning how to optimize my configuration and how to do things correctly. I discovered then Spacemacs, which made things much easier, but it was a little slow, and just after, I found the awesome Doom Emacs, and since, I didn't quit my Emacs screen!

In the beginning, I was basically copying chunks of Emacs Lisp code from the internet, which quickly becomes a mess, specially because I was using a mixture of vanilla Emacs style configurations and Doom style ones.

Now I decided to rewrite a cleaner version of my configuration which will be more Doom friendly, and for that, I found an excellent example in *tecosaur*'s emacs-config, so my current configuration is heavily inspired by *tecosaur*'s one.

2.1 This file

This is my literate configuration file, I use it to generate Doom's config files (`$DOOMDIR/init.el`, `$DOOMDIR/packages.el` and `$DOOMDIR/config.el`), as well as some other shell scripts, app installers, app launchers... etc.

Make `config.el` run (slightly) faster with lexical binding (see this blog post for more info).

```
1  ;;; config.el -*- lexical-binding: t; -*-
```

Add the shebang and the description to the `setup.sh` file, which will be used to set system settings and install some missing dependencies.

```
1  #!/bin/bash
2
3  # This is an automatically generated setup file, it installes some missing
4  # dependencies, configure system services, set system settings form better
5  # desktop integration... etc.
6  # Abdelhak BOUGOUFFA (c) 2022
```

Add the an initial comment to the `~/.zshrc` file.

```
1  # -*- mode: sh; -*-
2
3  # This file is automatically generated from my Org literate configuration.
4  # Abdelhak BOUGOUFFA (c) 2022
```

3 Doom configuration files

3.1 Pseudo early-init

This file will be loaded before the content of Doom's private `init.el`, I add some special stuff which I want to load very early.

Abdelhak Bougouffa © 2022

```
1  ;;; pseudo-early-init.el -*- lexical-binding: t; -*-
2
3  ;; Fix for #2386 until further investigation
4  ;; From https://git.sr.ht/~gagbo/doom-config
5  (when noninteractive
6    (after! undo-tree
7      (global-undo-tree-mode -1)))
```

3.2   Doom modules (`init.el`)

Here is the literate configuration which generates the Doom's `init.el` file, this file contains all the enabled Doom modules with the appropriate flags.

This section defines the default source blocks arguments . All source blocks in this section inherits these headers, so they will not be tangled unless overwriting in the block's header.

3.2.1   File skeleton

This first section defines the template for the subsections, it uses the `no-web` syntax to include subsections specified as `<<sub-section-name>>`.

```
1   ;;; init.el -*- lexical-binding: t; -*-
2
3   ;; This file controls what Doom modules are enabled and what order they load in.
4   ;; Press 'K' on a module to view its documentation, and 'gd' to browse its directory.
5
6   ;; I add some special stuff wich I want to load very early.
7   (load! "pseudo-early-init.el")
8
9   (doom!
10    :input
11    <<doom-input>>
12
13    :completion
14    <<doom-completion>>
15
16    :ui
17    <<doom-ui>>
18
19    :editor
20    <<doom-editor>>
21
22    :emacs
23    <<doom-emacs>>
24
25    :term
26    <<doom-term>>
27
28    :checkers
29    <<doom-checkers>>
30
31    :tools
32    <<doom-tools>>
33
34    :os
35    <<doom-os>>
36
37    :lang
38    <<doom-lang>>
39
40    :email
41    <<doom-email>>
42
43    :app
44    <<doom-app>>
45
```

Abdelhak Bougouffa © 2022

```
46    :config
47    <<doom-config>>
48  )
```

3.2.2 Input (`:input`)

Enable bidirectional languages support (`bidi`).

```
1  bidi
```

3.2.3 General (`:config`)

Enable `literate` configuration (like this file!), and some defaults.

```
1  literate
2  (default +bindings +smartparens)
```

3.2.4 Completion (`:completion`)

I'm lazy, I like Emacs to complete my writings.

```
1  (vertico +icons)
2  company
```

3.2.5 User interface (`:ui`)

Enables some user interface features for better user experience, the beautiful `modeline`, the `treemacs` project tree, better version control integration with `vc-gutter`… and other useful stuff.

```
1   deft
2   doom
3   doom-dashboard
4   hl-todo
5   hydra
6   modeline
7   vc-gutter
8   zen
9   ophints
10  nav-flash
11  (window-select +numbers)
12  (ligatures +extra)
13  (popup +all +defaults)
14  (emoji +ascii +unicode +github)
15  (treemacs +lsp)
16  workspaces
```

3.2.6 Editor (`:editor`)

Some editing modules, the most important feature is EVIL to enable Vim style editing in Emacs. I like also to edit with multiple cursors, enable `yasnippet` support, wrap long lines, auto format support.

```
1  (evil +everywhere)
2  file-templates
3  fold
4  format
5  multiple-cursors
```

```
6    parinfer
7    snippets
8    word-wrap
```

3.2.7 Emacs builtin stuff (`:emacs`)

Beautify Emacs builtin packages.

```
1    (dired +dirvish +icons)
2    (ibuffer +icons)
3    (undo +tree)
4    vc
```

3.2.8 Terminals (`:term`)

Run commands in terminal from Emacs. I use mainly `vterm` on my local machine, however, I like to have `eshell`, `shell` and `term` installed to use them for remote file editing (via Tramp).

```
1    eshell
2    vterm
3    shell
4    term
```

3.2.9 Checkers (`:checkers`)

I like to check my documents for errors while I'm typing. The `grammar` module enables LanguageTool support.

```
1    (syntax +childframe)
2    (spell +aspell)
3    grammar
```

3.2.10 Tools (`:tools`)

I enable some useful tools which facilitate my work flow, I like to enable Docker support, EditorConfig is a good feature to have. I like to enable `lsp-mode` and `dap-mode` for coding and debugging by enabling the `lsp` and `debugger` modules with `+lsp` support (further customization for `lsp` and `dap` below). `pdf` adds support through `pdf-tools`, which are great for viewing PDF files inside Emacs, I also enable some extra tools, like `magit`, `lookup`, `tmux`… etc.

```
1    direnv
2    editorconfig
3    ein
4    gist
5    make
6    pdf
7    rgb
8    tmux
9    upload
10   (lsp +peek)
11   (debugger +lsp)
12   (docker +lsp)
13   (eval +overlay)
14   (lookup +docsets +dictionary +offline)
15   (magit +forge)
16   tree-sitter
```

3.2.11   Operating system (`:os`)

I enable `tty` for better support of terminal editing.

```
1  (tty +osc)
```

3.2.12   Language support (`:lang`)

Most of the projects I'm working on are mainly written in C/C++, Python, Rust and some Lisp stuff, I edit also a lot of configuration and data files in several formats (`csv`, `yaml`, `xml`, `json`, `shell` scripts…). I use Org-mode to manage all my papers and notes, so I need to enable as many features as I need, I do enable `plantuml` also to quickly plot UML models withing Org documents.

```
1   plantuml
2   emacs-lisp
3   common-lisp
4   data
5   qt
6   coq
7   (markdown +grip)
8   (ocaml +tree-sitter)
9   (cc +lsp +tree-sitter)
10  (json +lsp +tree-sitter)
11  (julia +lsp +tree-sitter)
12  (latex +lsp +latexmk +fold)
13  (rust +lsp +tree-sitter)
14  (ess +lsp)
15  (yaml +lsp)
16  (sh +lsp +tree-sitter)
17  (python +lsp +pyenv +conda +pyright +tree-sitter)
18  (racket +lsp +xp)
19  (scheme +guile +racket +chez +gambit +gauche)
20  (org +dragndrop +gnuplot +jupyter +pandoc +noter +hugo +present +pomodoro +roam2)
21  (web +tree-sitter)
```

3.2.13   Email (`:email`)

I like to use `mu4e` to manage mail mailboxes. The `+org` flag adds `org-msg` support and `+gmail` adds better management of Gmail accounts.

```
1  (:if (executable-find "mu") (mu4e +org +gmail))
```

3.2.14   Apps (`:app`)

Emacs contains a ton of applications, some of them are supported by Doom, I like to use Emacs manage my calendar, chat on IRC, and receive news. I do use EMMS sometimes to play music without leaving Emacs, and I like to enable support for `emacs-everywhere`.

```
1  calendar
2  irc
3  emms
4  everywhere
5  (rss +org)
```

         Abdelhak Bougouffa © 2022

3.3   Additional packages (`packages.el`)

This section generates Doom's `packages.el`, with the associated configurations (`use-package!` blocks).
This file shouldn't be byte compiled.

```
1  ;; -*- no-byte-compile: t; -*-
```

4   General Emacs settings

4.1   User information

```
1  (setq user-full-name "Abdelhak Bougouffa"
2        user-mail-address "abougouffa@fedoraproject.org")
```

4.2   Secrets

Set the path to my GPG encrypted secrets. I like to set the cache expiry to `nil` instead of the default 2 hours.

```
1  (setq auth-sources '("~/.authinfo.gpg")
2        auth-source-do-cache t
3        auth-source-cache-expiry 86400 ; All day, defaut is 2h (7200)
4        password-cache t
5        password-cache-expiry 86400)
6
7  ;; Set my GPG key as the default key
8  (setq-default epa-file-encrypt-to '("F808A020A3E1AC37"))
```

4.3   Better defaults

4.3.1   File deletion

Delete files by moving them to trash.

```
1  (setq-default delete-by-moving-to-trash t
2                trash-directory nil) ;; Use freedesktop.org trashcan
```

4.3.2   Window

Take new window space from all other windows (not just current).

```
1  (setq-default window-combination-resize t)
```

4.3.3   Messages buffer

Stick to buffer tail, useful with `*Messages*` buffer. Derived from this answer.

```
1  (defvar +messages-buffer-auto-tail--enabled nil)
2
3  (defun +messages-buffer-auto-tail--advice (&rest arg)
4    "Make *Messages* buffer auto-scroll to the end after each message."
5    (let* ((buf-name (buffer-name (messages-buffer)))
6           ;; Create *Messages* buffer if it does not exist
7           (buf (get-buffer-create buf-name)))
8      ;; Activate this advice only if the point is _not_ in the *Messages* buffer
```

```
9       ;; to begin with. This condition is required; otherwise you will not be
10      ;; able to use `isearch' and other stuff within the *Messages* buffer as
11      ;; the point will keep moving to the end of buffer :P
12      (when (not (string= buf-name (buffer-name)))
13        ;; Go to the end of buffer in all *Messages* buffer windows that are
14        ;; *live* (`get-buffer-window-list' returns a list of only live windows).
15        (dolist (win (get-buffer-window-list buf-name nil :all-frames))
16          (with-selected-window win
17            (goto-char (point-max))))
18        ;; Go to the end of the *Messages* buffer even if it is not in one of
19        ;; the live windows.
20        (with-current-buffer buf
21          (goto-char (point-max))))))

23  (defun +messages-buffer-toggle-auto-tail ()
24    "Auto tail the '*Messages*' buffer."
25    (interactive)
26    ;; Add/remove an advice from the 'message' function.
27    (cond (+messages-buffer-auto-tail--enabled
28           (advice-remove 'message '+messages-buffer-auto-tail--advice)
29           (setq +messages-buffer-auto-tail--enabled nil)
30           (message "+messages-buffer-auto-tail: Disabled."))
31          (t
32           (advice-add 'message :after '+messages-buffer-auto-tail--advice)
33           (setq +messages-buffer-auto-tail--enabled t)
34           (message "+messages-buffer-auto-tail: Enabled."))))
```

Split defaults   Split horizontally to right, vertically below the current window.

```
1  (setq evil-vsplit-window-right t
2        evil-split-window-below t)
```

Show list of buffers when splitting.

```
1  (defadvice! prompt-for-buffer (&rest _)
2    :after '(evil-window-split evil-window-vsplit)
3    (consult-buffer))
```

4.3.4   Undo and auto-save

There is a package bbatsov/super-save, maybe better than the default `auto-save-mode`.

```
1  (setq undo-limit 80000000   ;; Raise undo-limit to 80Mb
2        evil-want-fine-undo t ;; By default while in insert all changes are one big blob. Be more granular
3        auto-save-default t   ;; Nobody likes to lose work, I certainly don't
4        scroll-preserve-screen-position 'always ;; Don't have `point' jump around
5        scroll-margin 2)        ;; It's nice to maintain a little margin
```

4.3.5   Editing

```
1  ;; Stretch cursor to the glyph width
2  (setq-default x-stretch-cursor t)
3
4  ;; Enable relative line numbers
5  (setq display-line-numbers-type 'relative)
6
7  ;; Iterate through CamelCase words
8  (global-subword-mode 1)
```

4.3.6   Emacs sources

```
1  (setq source-directory
2        (expand-file-name "~/Softwares/aur/emacs-git/src/emacs-git"))
```

4.3.7   Frame

```
1  ;; NOTE: Not tangled, replaced with params passed to emacsclient
2  ;; start the initial frame maximized
3  (add-to-list 'initial-frame-alist '(fullscreen . maximized))
4
5  ;; start every frame maximized
6  (add-to-list 'default-frame-alist '(fullscreen . maximized))
```

Maximizing
    To avoid conflict when launching Emacs in `emacs-everywhere` mode. I'm using it in command line when calling `emacsclient`, by adding this:

`--frame-parameters="'(fullscreen . maximized)"`

Focus created frame   The problem is, every time I launch an Emacs frame (from KDE), Emacs starts with no focus, I need each time to `Alt-TAB` to get Emacs under focus, and then start typing. I tried changing this behavior from Emacs by hooking `raise-frame` at startup, but it didn't work.
    Got from this comment, not working on my Emacs version.

```
1  ;; NOTE: Not tangled, not working
2  (add-hook 'server-switch-hook #'raise-frame)
```

    After some investigations, I found that this issue is probably KDE specific, the issue goes away by setting:
Window Management > **Window Behavior** > **Focus** > **Focus stealing prevention** to *None* in the KDE Settings.

```
1  ;; (set-frame-parameter nil 'internal-border-width 15)
2
3  ;; Add frame borders and window dividers
4  (modify-all-frames-parameters '((right-divider-width . 10)
5                                  (internal-border-width . 10)))
6
7  (dolist (face '(window-divider window-divider-first-pixel window-divider-last-pixel))
8    (face-spec-reset-face face)
9    (set-face-foreground face (face-attribute 'default :background)))
10
11 (set-face-background 'fringe (face-attribute 'default :background))
```

Margins

5   Emacs daemon

5.1   Initialization

When the daemon is running, I almost always want to do a few particular things with it, so I may as well eat the load time at startup. We also want to keep `mu4e` running.

Abdelhak Bougouffa © 2022

Lastly, while I'm not sure quite why it happens, but after a bit it seems that new Emacs client frames start on the `*scratch*` buffer instead of the dashboard. I prefer the dashboard, so let's ensure that's always switched to in new frames.

```
1  (defun +greedily-do-daemon-setup ()
2    (require 'org)
3    (when (and (featurep! :email mu4e) (require 'mu4e nil t))
4      (setq mu4e-confirm-quit t
5            +mu4e-lock-greedy t
6            +mu4e-lock-relaxed t)
7      (+mu4e-lock-start 'mu4e--start))
8    (when (and (featurep! :app rss) (require 'elfeed nil t))
9      (run-at-time nil (* 8 60 60) #'elfeed-update)))
10
11 (when (daemonp)
12   (add-hook 'emacs-startup-hook #'+greedily-do-daemon-setup)
13   (add-hook! 'server-after-make-frame-hook
14     (unless (string-match-p "\\*draft\\|\\*stdin\\|emacs-everywhere" (buffer-name))
15       (switch-to-buffer +doom-dashboard-name))))
```

5.2 Tweaks

5.2.1 Save recent files

When editing files with Emacs client, the files does not get stored by `recentf`, making Emacs forgets about recently opened files. A quick fix is to hook the `recentf-save-list` command to the `delete-frame-functions` and `delete-terminal-functions` which gets executed each time a frame/terminal is deleted.

```
1  (when (daemonp)
2    (add-hook! '(delete-frame-functions delete-terminal-functions)
3      (lambda (arg) (recentf-save-list))))
```

6 Package configuration

6.1 Check for external tools

Some of the added packages require external tools, I like to check for these tools and store the result in global constants.

```
1  (defun bool (val) (not (null val))) ;; Convert a value to boolean
2
3  (defconst ZOTERO-OK-P (bool (executable-find "zotero")))
4  (defconst AG-OK-P (bool (executable-find "ag")))
5  (defconst CHEZMOI-OK-P (bool (executable-find "chezmoi")))
6  (defconst BITWARDEN-OK-P (bool (executable-find "bw")))
7  (defconst REPO-OK-P (bool (executable-find "repo")))
8  (defconst MAXIMA-OK-P (bool (executable-find "maxima")))
9  (defconst QUARTO-OK-P (bool (executable-find "quarto")))
10 (defconst CLANG-FORMAT-OK-P (bool (executable-find "clang-format")))
11 (defconst ROSBAG-OK-P (bool (executable-find "rosbag")))
12
13 (defconst FRICAS-OK-P
14   (bool (and (executable-find "fricas")
15              (file-directory-p "/usr/lib/fricas/emacs"))))
16
17 (defconst EAF-OK-P
18   (bool (and (file-directory-p (expand-file-name "emacs-application-framework" doom-etc-dir))
19              ;; EAF doesn't work with LUCID build, however, I found LUCID more stable for
20              ;; Emacs daemon + emacsclient usage. So, this section will not be used for LUCID builds.
21              (not (string-search "LUCID" system-configuration-features)))))
22
23 (defconst NETEXTENDER-OK-P
```

```
24    (let ((ok (bool (and (executable-find "netExtender")
25                         (file-exists-p "~/.local/bin/netextender")
26                         (file-exists-p "~/.ssh/netExtender-params.gpg")))))
27      (unless ok (warn "Missing netExtender dependencies."))
28      ok)
29    "Evaluates to 't' when a valid netExtender configuration is present, 'nil' otherwise.")
30
31 (defconst MPD-OK-P
32    (let ((ok (bool (and (executable-find "mpc") (executable-find "mpd")))))
33      (unless ok (warn "Missing MPD or MPC. Falling back to the EMMS default backend."))
34      ok)
35    "Evaluates to 't' when MPD and MPC commands are present, 'nil' otherwise.")
36
37 (defconst MPV-OK-P
38    (let ((ok (bool (and MPD-OK-P
39                         (executable-find "mpv")
40                         (executable-find "youtube-dl")))))
41      (unless ok (warn "Missing MPV or youtube-dl."))
42      (and nil ok)) ;; NOTE: disabled
43    "Evaluates to 't' when MPV and youtube-dl commands are present, 'nil' otherwise.")
```

6.2   User interface

6.2.1   Font

Doom exposes five (optional) variables for controlling fonts in Doom. Here are the three important ones: `doom-font`, `doom-unicode-font` and `doom-variable-pitch-font`. The `doom-big-font` is used for `doom-big-font-mode`; use this for presentations or streaming.

They all accept either a `font-spec`, font string (`"Input Mono-12"`), or xlfd font string. You generally only need these two:

Some good fonts:

- `Iosevka Fixed` (THE FONT)

- Nerd fonts

    - `FantasqueSansMono Nerd Font Mono`
    - `mononoki Nerd Font Mono`
    - `CaskaydiaCove Nerd Font Mono`

- `Cascadia Code`

- `Fantasque Sans Mono`

- `JuliaMono` (good Unicode support)

- `IBM Plex Mono`

- `JetBrains Mono`

- `Roboto Mono`

- `Source Code Pro`

- `Input Mono Narrow`

- `Fira Code`

```
1 (setq doom-font (font-spec :family "FantasqueSansMono Nerd Font Mono" :size 20)
2       doom-big-font (font-spec :family "FantasqueSansMono Nerd Font Mono" :size 30)
3       doom-variable-pitch-font (font-spec :family "Andika") ;; inherits the :size from doom-font
4       doom-unicode-font (font-spec :family "JuliaMono")
5       doom-serif-font (font-spec :family "Input Serif" :weight 'light))
```

6.2.2   Theme

Set Doom's theme, some good choices:

- `doom-palenight`

- `doom-one`

- `doom-vibrant`

- `doom-dark+` (VS Code like)

- `doom-tomorrow-night`

- `doom-xcode`

- `doom-material`

- `doom-ayu-mirage`

- `doom-monokai-pro`

```
1  (setq doom-theme 'doom-vibrant)
2  (remove-hook 'window-setup-hook #'doom-init-theme-h)
3  (add-hook 'after-init-hook #'doom-init-theme-h 'append)
4  (delq! t custom-theme-load-path)
5
6  ;; By default 'doom-vibrant' uses red faces to mark modified file in modeline,
7  ;; lets change it to orange.
8  (custom-set-faces!
9    '(doom-modeline-buffer-modified :foreground "orange"))
```

6.2.3   Mode line

Clock   Display time and set the format to 24h.

```
1  (after! doom-modeline
2    (setq display-time-string-forms
3          '((propertize (concat "  " 24-hours ":" minutes)))))
4    (display-time-mode 1)) ; Enable time in the mode-line
```

Battery   Show battery level unless battery is not present or battery information is unknown.

```
1  (after! doom-modeline
2    (let ((battery-str (battery)))
3       (unless (or (equal "Battery status not available" battery-str)
4                   (string-match-p (regexp-quote "unknown") battery-str)
5                   (string-match-p (regexp-quote "N/A") battery-str))
6         (display-battery-mode 1))))
```

```
1  (setq doom-modeline-major-mode-icon t
2        doom-modeline-major-mode-color-icon t
3        doom-modeline-buffer-state-icon t)
```

Mode line customization

6.2.4   Set transparency

```
1  ;; NOTE: Not tangled
2  (set-frame-parameter (selected-frame) 'alpha '(98 100))
3  (add-to-list 'default-frame-alist '(alpha 98 100))
```

6.2.5   Dashboard

Custom splash image   Change the logo to an image, a set of beautiful images can be found in `assets`.

File
emacs-e.svg
gnu-emacs-white.svg
gnu-emacs-flat.svg
blackhole-lines.svg
doom-emacs-white.svg
doom-emacs-dark.svg

```
1  (setq fancy-splash-image (expand-file-name "assets/emacs-e.png" doom-private-dir))

Dashboard

6.2.6 Which key

Make `which-key` popup faster.

```
1   (setq which-key-idle-delay 0.5 ;; Default is 1.0
2         which-key-idle-secondary-delay 0.05) ;; Default is nil
```

I stol this chunk from tecosaur's config, it helps replacing the `evil-` prefix with a unicode char, making `which-key`'s candidate list less verbose.

```
1   (setq which-key-allow-multiple-replacements t)
2
3   (after! which-key
4     (pushnew! which-key-replacement-alist
5               '(("" . "\\`+?evil[-:]?\\(?:a-\\)?\\(.*\\)") . (nil . "\\1"))
6               '(("\\`g s" . "\\`evilem--?motion-\\(.*\\)") . (nil . "\\1"))))
```

6.2.7 Window title

I'd like to have just the buffer name, then if applicable the project folder.

```
1   (setq frame-title-format
2         '(""
3           (:eval
4            (if (s-contains-p org-roam-directory (or buffer-file-name ""))
5                (replace-regexp-in-string
6                 ".*/[0-9]*-?" " "
7                 (subst-char-in-string ?_ ?  buffer-file-name))
8              "%b"))
9           (:eval
10           (let ((project-name (projectile-project-name)))
11             (unless (string= "-" project-name)
12               (format (if (buffer-modified-p) "  %s" "  %s") project-name))))))
```

6.2.8 Fringe

Increase the left fringe width, to enable rendering breakpoints (in debug modes) correctly.

```
1   ;; (after! lsp-mode
2   ;;   (add-hook 'lsp-mode-hook (lambda () (set-fringe-mode '(15 . 15)))))
3
```

```
4  (setq-default left-fringe-width 25
5                 right-fringe-width 25)
```

6.2.9 Vertico

Since doom-emacs@ece4a74, Doom supports the `+childframe` for `:completion vertico`. This can be used to adjust the left and right fringes.

```
1  (after! vertico-posframe
2    (setq vertico-posframe-parameters '((left-fringe . 12) (right-fringe . 14))
3          vertico-posframe-border-width 3))
```

6.2.10 Company

I do not find `company` useful in Org files.

```
1  (setq company-global-modes
2        '(not erc-mode
3              circe-mode
4              message-mode
5              help-mode
6              gud-mode
7              vterm-mode
8              org-mode))
```

6.2.11 SVG tag

```
1  (package! svg-tag-mode)
```

```
1  (use-package! svg-tag-mode
2    :commands svg-tag-mode
3    :config
4    (setq svg-tag-tags
5          '(("^\\*.* .* \\(:[A-Za-z0-9]+\\)" .
6            ((lambda (tag) (svg-tag-make)
7                        tag
8                        :beg 1
9                        :font-family "Roboto Mono"
10                       :font-size 6
11                       :height 0.6
12                       :padding 0
13                       :margin 0)))
14          ("\\(:[A-Za-z0-9]+:\\)$" .
15            ((lambda (tag) (svg-tag-make)
16                        tag
17                        :beg 1
18                        :end -1
19                       :font-family "Roboto Mono"
20                       :font-size 6
21                       :height 0.6
22                       :padding 0
23                       :margin 0))))))
```

6.2.12   Focus

Dim the font color of text in surrounding paragraphs, focus only on the current line.

```
1  (package! focus)
```

```
1  (use-package! focus
2    :commands focus-mode)
```

6.2.13   Smooth scrolling

```
1  (when (<= emacs-major-version 28)
2    (package! good-scroll))
```

```
1  (if (> emacs-major-version 28)
2      (pixel-scroll-precision-mode 1)
3    (use-package! good-scroll
4      :config (good-scroll-mode 1)))
```

6.2.14   All the icons

Set some custom icons for some file extensions, basically for `.m` files.

```
1  (after! all-the-icons
2    (setcdr (assoc "m" all-the-icons-extension-icon-alist)
3            (cdr (assoc "matlab" all-the-icons-extension-icon-alist))))
```

6.3   Editing

6.3.1   Scratch buffer

Tell the scratch buffer to start in `emacs-lisp-mode`.

```
1  (setq doom-scratch-initial-major-mode 'emacs-lisp-mode)
```

6.3.2   Mouse buttons

Map extra mouse buttons to jump between buffers

```
1  (map! :n [mouse-8] #'better-jumper-jump-backward
2        :n [mouse-9] #'better-jumper-jump-forward)
```

6.3.3   Page break lines

A feature that displays ugly form feed characters as tidy horizontal rules. Inspired by M-EMACS.

```
1  (package! page-break-lines)
```

Abdelhak Bougouffa © 2022

```
1  (use-package! page-break-lines
2     :diminish
3     :init (global-page-break-lines-mode))
```

6.3.4 Binary files

Taken from this answer.

```
1  (defun +hexl/buffer-binary-p (&optional buffer)
2    "Return whether BUFFER or the current buffer is binary.
3
4  A binary buffer is defined as containing at least one null byte.
5
6  Returns either nil, or the position of the first null byte."
7    (with-current-buffer (or buffer (current-buffer))
8      (save-excursion (goto-char (point-min))
9                      (search-forward (string ?\x00) nil t 1))))
10
11 (defun +hexl/hexl-if-binary ()
12   "If `hexl-mode' is not already active, and the current buffer
13 is binary, activate `hexl-mode'."
14   (interactive)
15   (unless (eq major-mode 'hexl-mode)
16     (when (+hexl/buffer-binary-p)
17       (hexl-mode))))
18
19 (add-to-list 'magic-fallback-mode-alist '(+hexl/buffer-binary-p . hexl-mode) t)
```

6.3.5 Very large files

The *very large files* mode loads large files in chunks, allowing one to open ridiculously large files.

```
1  (package! vlf)
```

To make VLF available without delaying startup, we'll just load it in quiet moments.

```
1  (use-package! vlf-setup
2    :defer-incrementally vlf-tune vlf-base vlf-write vlf-search vlf-occur vlf-follow vlf-ediff vlf)
```

6.3.6 Evil

I'm not using evil-escape, lets disable it.

```
1  (package! evil-escape :disable t)
```

```
1  (after! evil
2    (setq evil-kill-on-visual-paste nil)) ; Don't put overwritten text in the kill ring
```

6.3.7 Aggressive indent

```
1  (package! aggressive-indent)
```

```
1  (use-package! aggressive-indent
2    :commands (aggressive-indent-mode))
```

6.3.8   YASnippet

Nested snippets are good, enable that.

```
1  (setq yas-triggers-in-field t)
```

6.4   Literate configuration

6.4.1   Allow babel execution in `doom` CLI actions

This file generates all my Doom config files, it works nicely, but for it to work with `doom sync` et al. I need to make sure that Org doesn't try to confirm that I want to allow evaluation (I do!).

Thankfully Doom supports $DOOMDIR/cli.el file which is sourced every time a CLI command is run, so we can just enable evaluation by setting `org-confirm-babel-evaluate` to `nil` there.

While we're at it, we should silence `org-babel-execute-src-block` to avoid polluting the output.

```
1  ;;; cli.el -*- lexical-binding: t; -*-
2  (setq org-confirm-babel-evaluate nil)
3
4  (defun doom-shut-up-a (orig-fn &rest args)
5    (quiet! (apply orig-fn args)))
6
7  (advice-add 'org-babel-execute-src-block :around #'doom-shut-up-a)
```

6.4.2   Asynchronous tangling

Doom adds an `org-mode` hook `+literate-enable-recompile-h`. This is a nice idea, but it's too blocking for my taste. Since I trust my tangling to be fairly straightforward, I'll just redefine it to a simpler, async, function.

```
1  (defvar +literate-tangle--proc nil)
2  (defvar +literate-tangle--proc-start-time nil)
3
4  (defadvice! +literate-tangle-async-h ()
5    "A very simplified version of `+literate-tangle-h', but async."
6    :override #'+literate-tangle-h
7    (unless (getenv "__NOTANGLE")
8      (let ((default-directory doom-private-dir))
9        (when +literate-tangle--proc
10          (message "Killing outdated tangle process...")
11          (set-process-sentinel +literate-tangle--proc #'ignore)
12          (kill-process +literate-tangle--proc)
13          (sit-for 0.3)) ; ensure the message is seen for a bit
14        (setq +literate-tangle--proc-start-time (float-time)
15              +literate-tangle--proc
16              (start-process "tangle-config"
17                             (get-buffer-create " *tangle config*")
18                             "emacs" "--batch" "--eval"
19                             (format "(progn \
20  (require 'ox) \
21  (require 'ob-tangle) \

```

6.5.4 Tramp

Let's try to make tramp handle prompts better

```
1  (after! tramp
2    (setenv "SHELL" "/bin/bash")
3    (setq tramp-shell-prompt-pattern "\\(?:^\\|
4  \\)[^]#$%>\n]*#?[]#$%>] *\\(\\[[0-9;]*[a-zA-Z] *\\)*")) ;; default +
```

6.5.5 Eros-eval

This makes the result of evals slightly prettier.

```
1  (setq eros-eval-result-prefix " ")
```

6.5.6 `dir-locals.el`

Reload `dir-locals.el` variables after modification. Taken from this answer.

```
1  (defun +dir-locals-reload-for-current-buffer ()
2    "reload dir locals for the current buffer"
3    (interactive)
4    (let ((enable-local-variables :all))
5      (hack-dir-local-variables-non-file-buffer)))
6
7  (defun +dir-locals-reload-for-all-buffers-in-this-directory ()
8    "For every buffer with the same `default-directory` as the
9  current buffer's, reload dir-locals."
10   (interactive)
11   (let ((dir default-directory))
12     (dolist (buffer (buffer-list))
13       (with-current-buffer buffer
14         (when (equal default-directory dir)
15           (+dir-locals-reload-for-current-buffer))))))
16
17 (add-hook!
18  '(emacs-lisp-mode-hook lisp-data-mode-hook)
19  (defun enable-autoreload-for-dir-locals ()
20    (when (and (buffer-file-name)
21               (equal dir-locals-file (file-name-nondirectory (buffer-file-name))))
22      (message "Dir-locals will be reloaded after saving.")
23      (add-hook 'after-save-hook '+dir-locals-reload-for-all-buffers-in-this-directory nil t))))
```

6.6 Symbols

6.6.1 Emojify

For starters, twitter's emojis look nicer than emoji-one. Other than that, this is pretty great OOTB .

```
1  (setq emojify-emoji-set "twemoji-v2")
```

One minor annoyance is the use of emojis over the default character when the default is actually preferred. This occurs with overlay symbols I use in Org mode, such as checkbox state, and a few other miscellaneous cases.

We can accommodate our preferences by deleting those entries from the emoji hash table

```elisp
(defvar emojify-disabled-emojis
  '(;; Org
    "" "" "" "" "" "" "" "" "" "" "®" "" "" "" ""
    ;; Terminal powerline
    ""
    ;; Box drawing
    "" "")
  "Characters that should never be affected by `emojify-mode'.")

(defadvice! emojify-delete-from-data ()
  "Ensure `emojify-disabled-emojis' don't appear in `emojify-emojis'."
  :after #'emojify-set-emoji-data
  (dolist (emoji emojify-disabled-emojis)
    (remhash emoji emojify-emojis)))
```

Now, it would be good to have a minor mode which allowed you to type ascii/gh emojis and get them converted to unicode. Let's make one.

```elisp
(defun emojify--replace-text-with-emoji (orig-fn emoji text buffer start end &optional target)
  "Modify `emojify--propertize-text-for-emoji' to replace ascii/github emoticons with unicode emojis, on the
  fly."
  (if (or (not emoticon-to-emoji) (= 1 (length text)))
      (funcall orig-fn emoji text buffer start end target)
    (delete-region start end)
    (insert (ht-get emoji "unicode"))))

(define-minor-mode emoticon-to-emoji
  "Write ascii/gh emojis, and have them converted to unicode live."
  :global nil
  :init-value nil
  (if emoticon-to-emoji
      (progn
        (setq-local emojify-emoji-styles '(ascii github unicode))
        (advice-add 'emojify--propertize-text-for-emoji :around #'emojify--replace-text-with-emoji)
        (unless emojify-mode
          (emojify-turn-on-emojify-mode)))
    (setq-local emojify-emoji-styles (default-value 'emojify-emoji-styles))
    (advice-remove 'emojify--propertize-text-for-emoji #'emojify--replace-text-with-emoji)))
```

This new minor mode of ours will be nice for messages, so let's hook it in for Email and IRC.

```elisp
(add-hook! '(mu4e-compose-mode org-msg-edit-mode circe-channel-mode) (emoticon-to-emoji 1))
```

6.6.2 Ligatures

Extra ligatures are good, however, I'd like to see my keywords! Lets disable them in C/C++, Rust and Python modes.

```elisp
(setq +ligatures-extras-in-modes '(not c-mode c++-mode rust-mode python-mode))
```

6.7 Checkers (spell & grammar)

6.7.1 Install back-end

For `flyspell` + `hunspell`

sudo pacman -S hunspell hunspell-en_US hunspell-en_GB hunspell-fr

For `spell-fu`

sudo pacman -S aspell aspell-en aspell-fr

6.7.2 Spell-Fu

Now, `spell-fu` supports multiple languages! Lets add English, French and Arabic. So I can "mélanger les langues sans avoir de problèmes!".

```
1  (after! spell-fu
2    (defun +spell-fu-register-dictionary (lang)
3      "Add `LANG` to spell-fu multi-dict, with a personal dictionary."
4      ;; Add the dictionary
5      (spell-fu-dictionary-add (spell-fu-get-ispell-dictionary lang))
6      (let ((personal-dict-file (expand-file-name (format "aspell.%s.pws" lang) doom-private-dir)))
7        ;; Create an empty personal dictionary if it doesn't exists
8        (unless (file-exists-p personal-dict-file) (write-region "" nil personal-dict-file))
9        ;; Add the personal dictionary
10       (spell-fu-dictionary-add (spell-fu-get-personal-dictionary (format "%s-personal" lang)
↪  personal-dict-file))))
11
12   (add-hook 'spell-fu-mode-hook
13             (lambda ()
14               (+spell-fu-register-dictionary "en")
15               (+spell-fu-register-dictionary "fr"))))
```

6.7.3 Guess language

```
1  (package! guess-language
2    :recipe (:host github
3             :repo "tmalsburg/guess-language.el"))
```

```
1  (use-package! guess-language
2    :config
3    (setq guess-language-languages '(en fr ar)
4          guess-language-min-paragraph-length 35
5          guess-language-langcodes '((en . ("en_US" "English" " " "English"))
6                                     (fr . ("francais" "French" " " "Français"))
7                                     (ar . ("arabic" "Arabic" " " "Arabic"))))
8    ;; :hook (text-mode . guess-language-mode)
9    :commands (guess-language
10              guess-language-mode
11              guess-language-region
12              guess-language-mark-lines))
```

6.7.4 Grammarly

Use either eglot-grammarly or lsp-grammarly.

```
1  (package! grammarly
2    :recipe (:host github
3             :repo "emacs-grammarly/grammarly"))
4
5  ;; Install the suitable LSP frontend
6  (if (featurep! :tools lsp +eglot)
7    (package! eglot-grammarly
8      :recipe (:host github
9               :repo "emacs-grammarly/eglot-grammarly"))
10   (package! lsp-grammarly
11     :recipe (:host github
12              :repo "emacs-grammarly/lsp-grammarly")))
```

Abdelhak Bougouffa © 2022

```

4               crdt-visualize-author-mode
5               crdt-org-sync-overlay-mode))
```

6.9.7 The Silver Searcher

An Emacs front-end to *The Silver Searcher*, first we need to install `ag` using `sudo pacman -S the_silver_searcher`.

```
1  (package! ag)
```

```
1  (use-package! ag
2    :when AG-OK-P
3    :commands (ag
4               ag-files
5               ag-regexp
6               ag-project
7               ag-project-files
8               ag-project-regexp))
```

6.9.8 Emacs Application Framework

EAF is presented as: *A free/libre and open-source extensible framework that revolutionizes the graphical capabilities of Emacs.* Or the key to ultimately *Live in Emacs*.

First, install EAF as specified in the project's readme. To update EAF, we need to run `git pull ; ./install-eaf.py` in `lisp/emacs-application-framework` and (`M-x eaf-install-and-update`) in Emacs. This updates EAF, applications and their dependencies.

```
1  (defconst EAF-DIR (expand-file-name "emacs-application-framework" doom-etc-dir))
2
3  (use-package! eaf
4    :when EAF-OK-P

10         "https://developers.redhat.com/blog/feed"
11         "https://lwn.net/headlines/rss"))
```

7.4   VPN configuration

7.4.1   NetExtender wrapper

I store my NetExtender VPN parameters in a GPG encrypted file. The credentials file contains a line of private parameters to pass to `netExtender`, like this:

```
1  echo "-u <USERNAME> -d <DOMAINE> -p <PASSWORD> -s <SERVER_IP>" \
2    | gpg -c > netExtender-params.gpg
```

Then I like to have a simple script which decrypt the credentials and launch a session via the `netExtender` command.

```
1  #!/bin/bash
2
3  if ! command -v netExtender &> /dev/null
4  then
5    echo "netExtender not found, installing from AUR using 'yay'"
6    yay -S netextender
7  fi
8
9  MY_LOGIN_PARAMS_FILE="$HOME/.ssh/netExtender-params.gpg"
10
11 echo "Y\n" | netExtender --auto-reconnect \
12   $(gpg -q --for-your-eyes-only --no-tty -d ${MY_LOGIN_PARAMS_FILE})
```

7.4.2   Launch NetExtender session from Emacs

```
1  (when NETEXTENDER-OK-P
2    (defvar +netextender-process-name "netextender")
3    (defvar +netextender-buffer-name "*netextender*")
4    (defvar +netextender-command '("~/.local/bin/netextender"))
5
6    (defun +netextender-start ()
7      "Launch a NetExtender VPN session"
8      (interactive)
9      (unless (get-process +netextender-process-name)
10       (if (make-process :name +netextender-process-name
11                         :buffer +netextender-buffer-name
12                         :command +netextender-command)
13           (message "Started NetExtender VPN session")
14         (message "Cannot start NetExtender"))))
15
16   (defun +netextender-kill ()
17     "Kill the created NetExtender VPN session"
18     (interactive)
19     (when (get-process +netextender-process-name)
20       (if (kill-buffer +netextender-buffer-name)
21           (message "Killed NetExtender VPN session")
22         (message "Cannot kill NetExtender")))))
```

7.5 Email `mu4e`

Configuring `mu4e` email accounts, note that you need to have a proper `mbsyncrc` file in the right directory.

7.5.1 mbsync

You will need to:

- Install `mu` and `isync` (`sudo pacman -S mu isync`)

- Set up a proper configuration file for your accounts at `~/.mbsyncrc`

- Run `mu init --maildir=~/Maildir --my-address=user@host1 --my-address=user@host2`

- Run `mbsync -c ~/.mbsyncrc -a`

- For sending mails from `mu4e`, add a `~/.authinfo` file, file contains a line in this format `machine MAIL.DOMAIN.TLD port 587 login USER password PASSWD`

- Encrypt the `~/.authinfo` file using GPG `gpg -c ~/.authinfo` and delete the original unencrypted file.

I use a `mbsyncrc` file for multi-accounts, with some hacks for Gmail accounts (to rename the `[Gmail]/...` folders). Here is an explained configuration example.

```
1   # mbsync config file
2   # GLOBAL OPTIONS
3   BufferLimit 50mb              # Global option:   Default buffer size is 10M, too small for modern machines.
4   Sync All                     # Channels global: Sync everything "Pull Push New ReNew Delete Flags" (default
    ↪   option)
5   Create Both                  # Channels global: Automatically create missing mailboxes on both sides
6   Expunge Both                 # Channels global: Delete messages marked for deletion on both sides
7   CopyArrivalDate yes          # Channels global: Propagate arrival time with the messages
8

7.5.2 msmtp

I was using the standard `smtpmail` to send mails; but recently, I'm getting problems when sending mails. I passed a whole day trying to fix mail sending for one of my accounts, at the end of the day, I got a working setup; BUT, sending the first mail always ask me about password! I need to enter the password to be able to send the mail, Emacs asks me then if I want to save it to `~/.authifo.gpg`, when I confirm saving it, it got duplicated in the `authinfo.gpg` file.

This seems to be a bug; and I found somewhere that `smtpmai` is buggy, and that `msmtp` seems to be a good alternative, so now I'm using a `msmtp`-based setup.

For this, we will need an additional configuration file, `~/.msmtprc`, I configure it the same way as `mbsync`, I extract the passwords from `~/.authinfo.gpg` using GPG and `awk`.

The following is a sample file `~/.msmtprc`.

```
1   # Set default values for all following accounts.
2   defaults
3   auth                on
4   tls                 on
5   tls_starttls        on
6   tls_trust_file      /etc/ssl/certs/ca-certificates.crt
7   logfile             ~/.msmtp.log
8
9   # Gmail
10  account             gmail
11  auth                plain
12  host                smtp.googlemail.com
13  port                587
14  from                username@gmail.com
15  user                username
16  passwordeval        "gpg -q --for-your-eyes-only --no-tty --logger-file /dev/null --batch -d
    ↪  ~/.authinfo.gpg | awk '/machine smtp.googlemail.com login .*@gmail.com/ {print $NF}'"
17  add_missing_date_header on
18
19  ## Gmail – aliases
20  account             alias-account : gmail
21  from                alias@mail.com
22
23  account             other-alias : gmail
24  from                other.alias@address.org
25
26  # Work
27  account             work
28  auth                on
29  host                smtp.domaine.tld
30  port                587
31  from                username@domaine.tld
32  user                username
33  passwordeval        "gpg -q --for-your-eyes-only --no-tty --logger-file /dev/null --batch -d
    ↪  ~/.authinfo.gpg | awk '/machine smtp.domaine.tld/ {print $NF}'"
34  tls_nocertcheck # ignore TLS certificate errors
```

7.5.3   mu4e

Add `mu4e` to path if it exists on the file system.

```
1   (add-to-list 'load-path "/usr/local/share/emacs/site-lisp/mu4e")
```

I configure my email accounts in a private file in `lisp/private/+mu4e-accounts.el`, which will be loaded after this common part:

```
1   (after! mu4e
2     (require 'org-msg)
3     (require 'smtpmail)
4     (require 'mu4e-contrib)
5     (require 'mu4e-icalendar)
6     (require 'org-agenda)
7
8     ;; Common parameters

7.7 Multimedia

I like to use a MPD powered EMMS, so when I restart Emacs I do not lost my music.

7.7.1 MPD, MPC, and MPV

```
1  ;; Not sure if it is required!
2  (after! mpc
3    (setq mpc-host "localhost:6600"))
```

I like to launch the music daemon `mpd` using Systemd, lets define some commands in Emacs to start/kill the server:

```
1  (defun +mpd-daemon-start ()
2    "Start MPD, connects to it and syncs the metadata cache."
3    (interactive)
4    (let ((mpd-daemon-running-p (+mpd-daemon-running-p)))
5      (unless mpd-daemon-running-p
6        ;; Start the daemon if it is not already running.
7        (setq mpd-daemon-running-p (zerop (call-process "systemctl" nil nil nil "--user" "start" "mpd.service"))))
8      (cond ((+mpd-daemon-running-p)
9             (+mpd-mpc-update)
10            (emms-player-mpd-connect)
11            (emms-cache-set-from-mpd-all)
12            (message "Connected to MPD!"))
13           (t
14            (warn "An error occured when trying to start Systemd mpd.service.")))))
15
16 (defun +mpd-daemon-stop ()
17   "Stops playback and kill the MPD daemon."
18   (interactive)
19   (emms-stop)
20   (call-process "systemctl" nil nil nil "--user" "stop" "mpd.service")
21   (message "MPD stopped!"))
22
23 (defun +mpd-daemon-running-p ()
24   "Check if the MPD service is running."
25   (zerop (call-process "systemctl" nil nil nil "--user" "is-active" "--quiet" "mpd.service")))
26
27 (defun +mpd-mpc-update ()
28   "Updates the MPD database synchronously."
29   (interactive)
30   (if (zerop (call-process "mpc" nil nil nil "update"))
31       (message "MPD database updated!")
32     (warn "An error occured when trying to update MPD database.")))
```

7.7.2 EMMS

Now, we configure EMMS to use MPD if it is present; otherwise, it uses whatever default backend EMMS is using.

```
1  (after! emms
2    ;; EMMS basic configuration
3    (require 'emms-setup)
4
5    (when MPD-OK-P
6      (require 'emms-player-mpd))
7
8    (emms-all)
```

```elisp
 9      (emms-default-players)
10
11      (setq emms-source-file-default-directory "~/Music/"
12            ;; Load cover images
13            emms-browser-covers 'emms-browser-cache-thumbnail-async
14            emms-seek-seconds 5)
15
16      (if MPD-OK-P
17          ;; If using MPD as backend
18          (setq emms-player-list '(emms-player-mpd)
19                emms-info-functions '(emms-info-mpd)
20                emms-player-mpd-server-name "localhost"
21                emms-player-mpd-server-port "6600"
22                emms-player-mpd-music-directory (expand-file-name "~/Music"))
23        ;; Use whatever backend EMMS is using by default (VLC in my machine)
24        (setq emms-info-functions '(emms-info-tinytag))) ;; use Tinytag, or '(emms-info-exiftool) for Exiftool

7.7.3 Elfeed :heart: MPV

https://sqrtminusone.xyz/posts/2021-09-07-emms/

Install `yt-rss` from Git:

```
1   YT_RSS_DIR=~/.local/share/yt-rss
2   git clone https://github.com/SqrtMinusOne/yt-rss.git $YT_RSS_DIR
3   cd $TY_RSS_DIR
4   pip install -r requirements.txt
5   gunicorn main:app
```

```
1   (after! (elfeed emms)
2     (when MPV-OK-P
3       ;; Integration with Elfeed
4       (define-emms-source elfeed (entry)
5         (let ((track (emms-track
6                        'url (+get-youtube-url (elfeed-entry-link entry)))))
7           (emms-track-set track 'info-title (elfeed-entry-title entry))
8           (emms-playlist-insert-track track)))
9
10      (defun +elfeed-add-emms-youtube ()
11        (interactive)
12        (emms-add-elfeed elfeed-show-entry)
13        (elfeed-tag elfeed-show-entry 'watched)
14        (elfeed-show-refresh))
15
16      (defun +elfeed-search-filter-source (entry)
17        "Filter elfeed search buffer by the feed under cursor."
18        (interactive (list (elfeed-search-selected :ignore-region)))
19        (when (elfeed-entry-p entry)
20          (elfeed-search-set-filter
21           (concat
22            "@6-months-ago "
23            "+unread "
24            "="
25            (replace-regexp-in-string
26             (rx "?" (* not-newline) eos)
27             ""
28             (elfeed-feed-url (elfeed-entry-feed entry)))))))))
```

7.7.4 Keybindings

Lastly, lets define keybindings for these commands, under `<leader> l m`.

```
1   (map! :leader :prefix ("l" . "custom")
2         (:when (featurep! :app emms)
3          :prefix-map ("m" . "media")
4          :desc "Playlist go"               "g" #'emms-playlist-mode-go
5          :desc "Add playlist"              "D" #'emms-add-playlist
6          :desc "Toggle random playlist"    "r" #'emms-toggle-random-playlist
7          :desc "Add directory"             "d" #'emms-add-directory
8          :desc "Add file"                  "f" #'emms-add-file
9          :desc "Smart browse"              "b" #'emms-smart-browse
10         :desc "Play/Pause"                "p" #'emms-pause
11         :desc "Start"                     "S" #'emms-start
12         :desc "Start"                     "S" #'emms-start
13         :desc "Stop"                      "s" #'emms-stop))
14
```

Then we add MPD related keybindings if MPD is used.

```
1  (map! :leader
2        :prefix ("l m")
3        (:when (and (featurep! :app emms) MPD-OK-P)
4         :prefix-map ("m" . "mpd/mpc")
5         :desc "Start daemon"           "s" #'+mpd-daemon-start
6         :desc "Stop daemon"            "k" #'+mpd-daemon-stop
7         :desc "EMMS player (MPD update)"  "R" #'emms-player-mpd-update-all-reset-cache
8         :desc "Update database"        "u" #'+mpd-mpc-update))
```

7.7.5 Cycle song information in mode line

I found a useful package named `emms-mode-line-cycle` which permits to do this; however, it has not been updated since a while, it uses some obsolete functions to draw icon in mode line, so I forked it, got rid of the problematic parts, and added some minor stuff.

```
1  (package! emms-mode-line-cycle
2    :recipe (:host github
3             :repo "abougouffa/emms-mode-line-cycle"))
```

```
1   (use-package! emms-mode-line-cycle
2     :after emms
3     :config

33
34    (emms-mode-line-cycle 1))
```

7.8 Maxima

The Maxima CAS cames bundled with three Emacs modes: `maxima`, `imaxima` and `emaxima`; installed by default in `"/usr/share/emacs/site-lisp/maxima"`.

7.8.1 Maxima

The emacsmirror/maxima seems more up-to-date, and supports completion via Company, so lets install it from Github. Note that, normally, we don't need to specify a recipe; however, installing it directly seems to not install `company-maxima.el` and `poly-maxima.el`.

```
1  (package! maxima
2    :recipe (:host github
3             :repo "emacsmirror/maxima"
4             :files (:defaults
5                     "keywords"
6                     "company-maxima.el"
7                     "poly-maxima.el")))
```

```
1  (use-package! maxima
2    :when MAXIMA-OK-P
3    :commands (maxima-mode maxima-inferior-mode maxima)
4    :init
5    (require 'straight) ;; to use `straight-build-dir' and `straight-base-dir'
6    (setq maxima-font-lock-keywords-directory ;; a workaround to undo the straight workaround!
7          (expand-file-name (format "straight/%s/maxima/keywords" straight-build-dir) straight-base-dir))
8
9    ;; The `maxima-hook-function' setup `company-maxima'.
10   (add-hook 'maxima-mode-hook #'maxima-hook-function)
11   (add-hook 'maxima-inferior-mode-hook #'maxima-hook-function)
12   (add-to-list 'auto-mode-alist '("\\.ma[cx]\\'" . maxima-mode)))
```

7.8.2 IMaxima

For the `imaxima` (Maxima with image support), the emacsattic/imaxima seems outdated compared to the `imaxima` package of the official Maxima distribution, so lets install `imaxima` from the source code of Maxima, hosted on Sourceforge git.code.sf.net/p/maxima/code. The package files are stored in the repository's subdirectory `interfaces/emacs/imaxima`.

```
1  ;; Use the `imaxima' package bundled with the official Maxima distribution.
2  (package! imaxima
3    :recipe (:host nil ;; Unsupported host, we will specify the complete repo link
4             :repo "https://git.code.sf.net/p/maxima/code"
5             :files ("interfaces/emacs/imaxima/*")))
```

```
1  (use-package! imaxima
2    :when MAXIMA-OK-P
3    :commands (imaxima imath-mode)
4    :init
5    (setq imaxima-use-maxima-mode-flag nil ;; otherwise, it don't render equations with LaTeX.
6          imaxima-scale-factor 2.0)
7
8    ;; Hook the `maxima-inferior-mode' to get Company completion.
9    (add-hook 'imaxima-startup-hook #'maxima-inferior-mode))
```

7.9 FriCAS

The FriCAS cames bundled with an Emacs mode, lets load it.

```
1  (use-package! fricas
2    :when FRICAS-OK-P
3    :load-path "/usr/lib/fricas/emacs"
4    :commands (fricas-mode fricas-eval fricas))
```

Abdelhak Bougouffa © 2022

8   Programming

8.1   File templates

For some file types, we overwrite defaults in the snippets directory, others need to have a template assigned.

```
1  (set-file-template! "\\.tex$" :trigger "__" :mode 'latex-mode)
2  (set-file-template! "\\.org$" :trigger "__" :mode 'org-mode)
3  (set-file-template! "/LICEN[CS]E$" :trigger '+file-templates/insert-license)
```

8.2   CSV rainbow

Stolen from here.

```
1  (after! csv-mode
2    ;; TODO: Need to fix the case of two commas, example "a,b,,c,d"
3    (require 'cl-lib)
4    (require 'color)
5
6    (map! :localleader
7          :map csv-mode-map
8          "R" #'+csv-rainbow)
9
10   (defun +csv-rainbow (&optional separator)
11     (interactive (list (when current-prefix-arg (read-char "Separator: "))))
12     (font-lock-mode 1)
13     (let* ((separator (or separator ?\,))
14            (n (count-matches (string separator) (point-at-bol) (point-at-eol)))
15            (colors (cl-loop for i from 0 to 1.0 by (/ 2.0 n)
16                             collect (apply #'color-rgb-to-hex
17                                            (color-hsl-to-rgb i 0.3 0.5)))))
18       (cl-loop for i from 2 to n by 2
19               for c in colors
20               for r = (format "^\\([^%c\n]+%c\\)\\{%d\\}" separator separator i)
21               do (font-lock-add-keywords nil `((,r (1 '(face (:foreground ,c)))))))))))
22
23   ;; provide CSV mode setup
24   ;; (add-hook 'csv-mode-hook (lambda () (+csv-rainbow)))
```

8.3   ESS

View data frames better with

```
1  (package! ess-view)
```

8.4   GNU Octave

Files with .m extension gets recognized automatically as Objective C files. Lets change this to be recognized as Octave/Matlab files.

```
1  (add-to-list 'auto-mode-alist '("\\.m\\'" . octave-mode))
```

8.5   ROS

8.5.1   Extensions

Add ROS specific file formats:

Abdelhak Bougouffa © 2022

```
1  (add-to-list 'auto-mode-alist '("\\.rviz$"   . conf-unix-mode))
2  (add-to-list 'auto-mode-alist '("\\.launch$" . xml-mode))
3  (add-to-list 'auto-mode-alist '("\\.urdf$"   . xml-mode))
4  (add-to-list 'auto-mode-alist '("\\.xacro$"  . xml-mode))
5
6  ;; msg and srv files: for now use gdb-script-mode
7  (add-to-list 'auto-mode-alist '("\\.msg\\'"    . gdb-script-mode))
8  (add-to-list 'auto-mode-alist '("\\.srv\\'"    . gdb-script-mode))
9  (add-to-list 'auto-mode-alist '("\\.action\\'" . gdb-script-mode))
```

8.5.2 ROS bags

Mode to view ROS `.bag` files. Taken from code-iai/ros_emacs_utils.

```
1  (when ROSBAG-OK-P
2    (define-derived-mode rosbag-view-mode
3      fundamental-mode "Rosbag view mode"
4      "Major mode for viewing ROS bag files."
5      (let ((f (buffer-file-name)))
6        (let ((buffer-read-only nil))
7          (erase-buffer)
8          (message "Calling rosbag info")
9          (call-process "rosbag" nil (current-buffer) nil
10                        "info" f)
11         (set-buffer-modified-p nil))
12       (view-mode)
13       (set-visited-file-name nil t)))
14
15    ;; rosbag view mode
16    (add-to-list 'auto-mode-alist '("\\.bag$" . rosbag-view-mode)))
```

8.5.3 `ros.el`

I found this awesome `ros.el` package made by Max Beutelspacher, which facilitate working with ROS machines, supports ROS1 and ROS2, with local workspaces or remote ones (over Trump!).

```
1  ;; `ros.el' depends on `with-shell-interpreter' among other packages
2  ;; See: https://github.com/DerBeutlin/ros.el/blob/master/Cask
3  (package! with-shell-interpreter)
4  (package! ros
5    :recipe (:host github
6             :repo "DerBeutlin/ros.el"))
```

Now, we configure the ROS1/ROS2 workspaces to work on. But before that, we need to install some tools on the ROS machine, and build the workspace for the first time using `colcon build`, the repository contains example Docker files for Noetic and Foxy.

```
1  (use-package! ros
2    :init (map! :leader
3               :prefix ("l" . "custom")
4               :desc "Hydra ROS" "r" #'hydra-ros-main/body)
5    :commands (hydra-ros-main/body ros-set-workspace)
6    :config
7    (setq ros-workspaces
8          (list (ros-dump-workspace
9                 :tramp-prefix (format "/docker:%s@%s:" "ros" "ros-machine")
10                :workspace "~/ros_ws"
11                :extends '("/opt/ros/noetic/"))
12               (ros-dump-workspace
13                :tramp-prefix (format "/ssh:%s@%s:" "swd_sk" "172.16.96.42")
14                :workspace "~/ros_ws"
15                :extends '("/opt/ros/noetic/"))
```

```
16              (ros-dump-workspace
17               :tramp-prefix (format "/ssh:%s@%s:" "swd_sk" "172.16.96.42")
18               :workspace "~/ros2_ws"
19               :extends '("/opt/ros/foxy/")))))
```

8.6 Scheme

```
1  (after! geiser
2    (setq geiser-chez-binary "chez-scheme")) ;; default is "scheme"
```

8.7 Embedded systems

8.7.1 Embed.el

Some embedded systems development tools.

TODO: Try to integrate embedded debuggers adapters with `dap-mode`:

- probe-rs-debugger

- stm32-emacs

- cortex-debug with potential integration with DAP

- esp-debug-adapter

```
1  (package! embed
2    :recipe (:host github
3             :repo "sjsch/embed-el"))
```

```
1  (use-package! embed
2    :commands (embed-openocd-start
3               embed-openocd-stop
4               embed-openocd-gdb
5               embed-openocd-flash)
6
7    :init
8    (map! :leader :prefix ("l" . "custom")
9          (:when (featurep! :tools debugger +lsp)
10          :prefix-map ("e" . "embedded")
11          :desc "Start OpenOCD"    "o" #'embed-openocd-start
12          :desc "Stop OpenOCD"     "O" #'embed-openocd-stop
13          :desc "OpenOCD GDB"      "g" #'embed-openocd-gdb
14          :desc "OpenOCD flash"    "f" #'embed-openocd-flash)))
```

8.7.2 Bitbake (Yocto)

Add support for Yocto Project files.

```
1  (package! bitbake-modes
2    :recipe (:host bitbucket
3             :repo "olanilsson/bitbake-modes"))
```

```
1  (use-package bitbake-modes
2    :commands (bitbake-mode
3                conf-bitbake-mode
4                bb-scc-mode wks-mode
5                bitbake-task-log-mode
6                bb-sh-mode
7                mmm-mode))
```

8.8 Debugging

8.8.1 DAP

I like to use cpptools over webfreak.debug. So I enable it after loading dap-mode. I like also to have a mode minimal UI. And I like to trigger dap-hydra when the program hits a break point, and automatically delete the session and close Hydra when DAP is terminated.

```
1  (unpin! dap-mode)
```

```
1  (after! dap-mode
2    (require 'dap-cpptools)
3
4    ;; More minimal UI
5    (setq dap-auto-configure-features '(locals tooltip)
6          dap-auto-show-output nil ;; Hide the annoying server output
7          lsp-enable-dap-auto-configure t)
8
9    ;; Automatically trigger dap-hydra when a program hits a breakpoint.
10   (add-hook 'dap-stopped-hook (lambda (arg) (call-interactively #'dap-hydra)))
11
12   ;; Automatically delete session and close dap-hydra when DAP is terminated.
13   (add-hook 'dap-terminated-hook
14             (lambda (arg)
15               (call-interactively #'dap-delete-session)
16               (dap-hydra/nil)))
17
18   ;; A workaround to correctly show breakpoints
19   ;; from: https://github.com/emacs-lsp/dap-mode/issues/374#issuecomment-1140399819
20   (add-hook! +dap-running-session-mode
21       (set-window-buffer nil (current-buffer))))
```

Doom store Doom Emacs stores session information persistently using the core store mechanism. However, relaunching a new session doesn't overwrite the last stored session, to do so, I define a helper function to clear data stored in the "+debugger" location. (see `+debugger--get-last-config` function.)

```
1  (defun +debugger/clear-last-session ()
2    "Clear the last stored session"
3    (interactive)
4    (doom-store-clear "+debugger"))
5
6  (map! :leader :prefix ("l" . "custom")
7        (:when (featurep! :tools debugger +lsp)
8         :prefix-map ("d" . "debugger")
9         :desc "Clear last DAP session" "c" #'+debugger/clear-last-session))
```

8.8.2 The Grand "Cathedral" Debugger

For C/C++, DAP mode is missing so much features. In my experience, both cpptools and gdb DAP interfaces aren't mature, it stops and disconnect while debugging, making it a double pain.

Additional commands   There is no best than using pure GDB, it makes debugging more flexible. Lets define some missing GDB commands, add them to Hydra keys, and define some reverse debugging commands for usage with rr (which we can use by substituting `gdb` by `rr replay` when starting the session).

```
1    (after! realgud
2      (require 'hydra)
3
4      ;; Add some missing gdb/rr commands
5      (defun +realgud:cmd-start (arg)
6        "start = break main + run"
7        (interactive "p")
8        (realgud-command "start"))
9
10     (defun +realgud:cmd-reverse-next (arg)
11       "Reverse next"
12       (interactive "p")
13       (realgud-command "reverse-next"))
14
15     (defun +realgud:cmd-reverse-step (arg)
16       "Reverse step"
17       (interactive "p")
18       (realgud-command "reverse-step"))
19
20     (defun +realgud:cmd-reverse-continue (arg)
21       "Reverse continue"
22       (interactive "p")
23       (realgud-command "reverse-continue"))
24
25     (defun +realgud:cmd-reverse-finish (arg)
26       "Reverse finish"
27       (interactive "p")
28       (realgud-command "reverse-finish"))
29
30     ;; Define a hydra binding
31     (defhydra realgud-hydra (:color pink :hint nil :foreign-keys run)
32       "
33  Stepping | _n_: next      | _i_: step   | _o_: finish | _c_: continue | _R_: restart | _u_:

50       ("bt" realgud:cmd-tbreak)
51       ("bD" realgud:cmd-delete)
52       ("be" realgud:cmd-enable)
53       ("bd" realgud:cmd-disable)
54       ("ee" realgud:cmd-eval-at-point)
55       ("er" realgud:cmd-eval-region)
56       ("tr" realgud:cmd-backtrace)
57       ("eE" realgud:cmd-eval)
58       ("!"  realgud:cmd-shell)
59       ("Qk" realgud:cmd-kill)
60       ("Sg" realgud:gdb)
61       ("Ss" +realgud:cmd-start)
62       ("q"  nil "quit" :color blue) ;; :exit
63       ("Qq" realgud:cmd-quit :color blue)) ;; :exit
```

```
64
65    (defun +debugger/realgud:gdb-hydra ()
66      "Run `realgud-hydra'."
67      (interactive)
68      (realgud-hydra/body))
69
70    (map! :leader :prefix ("l" . "custom")
71          (:when (featurep! :tools debugger)
72            :prefix-map ("d" . "debugger")
73            :desc "RealGUD hydra" "h" #'+debugger/realgud:gdb-hydra)))
```

RealGUD `.dir-locals.el` support (only for GDB) I do a lot of development on C/C++ apps that gets data from command line arguments, which means I have to type my arguments manually after calling `realgud:gdb`, which is very annoying.

For DAP mode, there is a support for either `dap-debug-edit-template`, or `launch.json`. For RealGUD though, I didn't find any ready-to-use feature like this. So I define a parameter list named `+realgud:launch-plist`, which supports `:program` and `:args`. The first is a string of the program path, and the second is a list of string arguments to pass to the program.

```
1    ;; A variable which to be used in .dir-locals.el, formatted as a property list;
2    ;; '(:program "..." :args ("args1" "arg2" ...))
3    ;; "${workspaceFolder}" => gets replaced with project workspace (from projectile)
4    ;; "${workspaceFolderBasename}" => gets replaced with project workspace's basename
5    (defvar +realgud:launch-plist nil)
```

This variable is set in a per-project basis thanks to `.dir-locals.el`, some thing like this:

```
1    ;; Example entry in .dir-locals.el
2    ((nil . ((+realgud:launch-plist . '(:program "${workspaceFolder}/build/bin/my_prog"
3                                        :args ("--in_file=${workspaceFolder}/some/file.csv"
4                                               "--out_file=/tmp/some_randome_file"
5                                               "-a"))))))
```

The special variables `${workspaceFolder}` and `${workspaceFolderBasename}` are defined as in VS Code, the actual values are filled from `projectile-project-root`.

```
1    (defun +realgud:get-launch-debugger-args (&key program args)
2      (let ((debugger--args ""))
3        (when program
4          (setq debugger--args program)
5          (when args
6            (setq debugger--args (concat debugger--args " " (s-join " " args)))))
7        ;; Replace special variables
8        (let* ((ws--root (expand-file-name (or (projectile-project-root) ".")))
9               (ws--basename (file-name-nondirectory
10                              (if (s-ends-with-p "/" ws--root)
11                                  (substring ws--root 0 -1)

```

8.8.3   GDB

Emacs GDB   DAP mode is great, however, it is not mature for C/C++ debugging, it does not support some basic features like *Run until cursor*, *Show disassembled code*... etc. Emacs have builtin `gdb` support through `gdb-mi` and `gud`.

The `emacs-gdb` package overwrites the builtin `gdb-mi`, it is much faster (thanks to it's C module), and it defines some easy to use UI, with Visual Studio like keybindings.

```
1   (package! gdb-mi
2     :recipe (:host github
3             :repo "weirdNox/emacs-gdb"
4             :files ("*.el" "*.c" "*.h" "Makefile")))
```

```
1   (use-package! gdb-mi
2     :init
3     (fmakunbound 'gdb)
4     (fmakunbound 'gdb-enable-debug)
5
6     :config
7     (setq gdb-window-setup-function #'gdb--setup-windows ;; TODO: Customize this
8           gdb-ignore-gdbinit nil) ;; I use gdbinit to define some useful stuff
9     ;; History
10    (defvar +gdb-history-file "~/.gdb_history")
11    (defun +gud-gdb-mode-hook-setup ()
12      "GDB setup."
13
```

```
14     ;; Suposes "~/.gdbinit" contains:
15     ;; set history save on
16     ;; set history filename ~/.gdb_history
17     ;; set history remove-duplicates 2048
18     (when (and (ring-empty-p comint-input-ring)
19                (file-exists-p +gdb-history-file))
20       (setq comint-input-ring-file-name +gdb-history-file)
21       (comint-read-input-ring t)))
22
23   (add-hook 'gud-gdb-mode-hook '+gud-gdb-mode-hook-setup))
```

Custom layout for `gdb-many-windows` Stolen from `https://stackoverflow.com/a/41326527/3058915`. I used it to change the builtin `gdb-many-windows` layout.

```
1   (setq gdb-many-windows nil)
2
3   (defun set-gdb-layout(&optional c-buffer)
4     (if (not c-buffer)
5         (setq c-buffer (window-buffer (selected-window)))) ;; save current buffer
6
7     ;; from http://stackoverflow.com/q/39762833/846686
8     (set-window-dedicated-p (selected-window) nil) ;; unset dedicate state if needed
9     (switch-to-buffer gud-comint-buffer)
10    (delete-other-windows) ;; clean all
11
12    (let* ((w-source (selected-window)) ;; left top
13           (w-gdb (split-window w-source nil 'right)) ;; right bottom
14           (w-locals (split-window w-gdb nil 'above)) ;; right middle bottom

8.9 Completion & IDE

8.9.1 Eglot

Eglot uses `project.el` to detect the project root. This is a workaround to make it work with `projectile`:

```
1   (after! eglot
2     ;; A hack to make it works with projectile
3     (defun projectile-project-find-function (dir)
4       (let* ((root (projectile-project-root dir)))
5         (and root (cons 'transient root))))
6
7     (with-eval-after-load 'project
8       (add-to-list 'project-find-functions 'projectile-project-find-function))
9
10    ;; Use clangd with some options
11    (set-eglot-client! 'c++-mode '("clangd" "-j=3" "--clang-tidy")))
```

8.9.2 LSP mode

Enable some useful UI stuff LSP mode provides a set of configurable UI stuff, Doom Emacs disables some of the UI components; however, I like to enable some less intrusive, more useful UI stuff.

```
1   (after! lsp-ui
2     (setq lsp-ui-sideline-enable t
3           lsp-ui-sideline-show-code-actions t
4           lsp-ui-sideline-show-diagnostics t
5           lsp-ui-sideline-show-hover nil
6           lsp-log-io nil
7           lsp-lens-enable t ; not working properly with ccls!
8           lsp-diagnostics-provider :auto
9           lsp-enable-symbol-highlighting t
10          lsp-headerline-breadcrumb-enable nil
11          lsp-headerline-breadcrumb-segments '(symbols)))
```

```
1   (after! lsp-clangd
2     (setq lsp-clients-clangd-args
3           '("-j=4"
4             "--background-index"
5             "--clang-tidy"
6             "--completion-style=detailed"
```

```
7              "--header-insertion=never"
8              "--header-insertion-decorators=0"))
9      (set-lsp-priority! 'clangd 2))
```

LSP mode with `clangd`

```
1    ;; NOTE: Not tangled, using the default ccls
2    (after! ccls
3      (setq ccls-initialization-options
4            '(:index (:comments 2
5                      :trackDependency 1
6                      :threads 4)
7              :completion (:detailedLabel t)))
8      (set-lsp-priority! 'ccls 2)) ; optional as ccls is the default in Doom
```

LSP mode with `ccls`

Enable `lsp` over `tramp`

```
1    (after! tramp
2      (require 'lsp-mode)
3      ;; (require 'lsp-pyright)
4
5      (setq lsp-enable-snippet nil
6            lsp-log-io nil
7            ;; To bypass the "lsp--document-highlight fails if
8            ;; textDocument/documentHighlight is not supported" error
9            lsp-enable-symbol-highlighting nil)
10
11     (lsp-register-client
12      (make-lsp-client
13       :new-connection (lsp-tramp-connection "pyls")
14       :major-modes '(python-mode)
15       :remote? t
16       :server-id 'pyls-remote)))
```

Python

```
1    ;; NOTE: WIP: Not tangled
2    (after! tramp

18        :remote? t
19        :server-id 'clangd-remote)))
```

C/C++ with `clangd`

VHDL   By default, LSP uses the proprietary VHDL-Tool to provide LSP features; however, there is free and open source alternatives: `ghdl-ls` and `rust_hdl`. I have some issues running `ghdl-ls` installed form `pip` through the `pyghdl` package, so lets use `rust_hdl` instead.

```
1  (use-package! vhdl-mode
2    ;; Required unless vhdl_ls is on the $PATH
3    :config
4    (setq lsp-vhdl-server-path "~/Projects/foss_projects/rust_hdl/target/release/vhdl_ls"
5          lsp-vhdl-server 'vhdl-ls
6          lsp-vhdl--params nil)
7    (require 'lsp-vhdl)
8
9    :hook (vhdl-mode . (lambda ()
10                        (lsp t)
11                        (flycheck-mode t))))
```

```
1  (package! lsp-sonarlint)
```

SonarLint

```
1  ;; TODO: configure it, for the moment, it seems that it doesn't support C/C++
```

8.9.3   Cppcheck

Check for everything!

```
1  (after! flycheck
2    (setq flycheck-cppcheck-checks '("information"
3                                     "missingInclude"
4                                     "performance"
5                                     "portability"
6                                     "style"
7                                     "unusedFunction"
8                                     "warning"))) ;; Actually, we can use "all"
```

8.9.4   Project CMake

A good new package to facilitate using CMake projects with Emacs, it glues together `project`, `eglot`, `cmake` and `clangd`.

```
1  (package! project-cmake
2    :disable (not (featurep! :tools lsp +eglot)) ; Enable only if (lsp +eglot) is used
3    :recipe (:host github
4             :repo "juanjosegarciaripoll/project-cmake"))
```

```
1  (use-package! project-cmake
2      :config
3      (require 'eglot)
4      (project-cmake-scan-kits)
5      (project-cmake-eglot-integration))
```

8.9.5   Unibeautify

The next-gen beautifier? Add initial support for Unibeautify.

`npm install -g @unibeautify/cli`

```
1  (package! unibeautify
2    :recipe (:host github
3             :repo "Unibeautify/emacs"))
```

```
1  (use-package! unibeautify
2    :commands (unibeautify))
```

8.9.6   FZF

```
1  (package! fzf)
```

```
1  (after! evil
2    (evil-define-key 'insert fzf-mode-map (kbd "ESC") #'term-kill-subjob))
3
4  (define-minor-mode fzf-mode

8.18   Graphviz

Graphviz is a nice method of visualizing simple graphs, based on plaintext `.dot` / `.gv` files.

```
1  (package! graphviz-dot-mode)
```

```
1  (use-package! graphviz-dot-mode
2    :commands (graphviz-dot-mode graphviz-dot-preview))
```

8.19   Inspector

```
1  (package! inspector
2    :recipe (:host github
3            :repo "mmontone/emacs-inspector"))
```

```
1  (use-package! inspector
2    :commands (inspect-expression inspect-last-sexp))
```

9   Office

9.1   Org mode additional packages

To avoid problems in the `(after! org)` section.

```
1  (unpin! org-roam) ;; To avoid problems with org-roam-ui
2  (package! websocket)
3  (package! org-roam-ui)
4  (package! org-wild-notifier)
5  (package! org-fragtog)
6  (package! org-ref)
7  (package! org-appear)
8  (package! org-super-agenda)
9  (package! doct)
10
11 (package! org-mode
12   ;; https://github.com/doomemacs/doomemacs/issues/6478#issuecomment-1160699339
13   :pin "971eb6885ec996c923e955730df3bafbdc244e54")
14
15 (package! caldav
16   :recipe (:host github

```

9.2 Org mode

9.2.1 Intro

Because this section is fairly expensive to initialize, we'll wrap it in a `(after! ...)` block.

```
1  (after! org
2    <<org-conf>>
3  )
```

9.2.2 Behavior

Tweaking defaults

```
1  (setq org-directory "~/Dropbox/Org/"         ; let's put files here
2        org-use-property-inheritance t         ; it's convenient to have properties inherited
3        org-log-done 'time                     ; having the time an item is done sounds convenient
4        org-list-allow-alphabetical t          ; have a. A. a) A) list bullets
5  ;;    org-export-in-background t             ; run export processes in external emacs process
6  ;;    org-export-async-debug t
7        org-tags-column 0
8        org-catch-invisible-edits 'smart       ;; try not to accidently do weird stuff in invisible regions
9        org-export-with-sub-superscripts '{}  ;; don't treat lone _ / ^ as sub/superscripts, require _{} / ^{}
10       org-auto-align-tags nil
11       org-special-ctrl-a/e t
12       org-startup-indented t ;; Enable 'org-indent-mode' by default, override with '+#startup: noindent' for big
   ↪   files
13       org-insert-heading-respect-content t)
```

Org basics

Babel I also like the `:comments` header-argument, so let's make that a default.

```
1  (setq org-babel-default-header-args
2        '((:session  . "none")
3          (:results  . "replace")
4          (:exports  . "code")
5          (:cache    . "no")
6          (:noweb    . "no")
7          (:hlines   . "no")
8          (:tangle   . "no")
9          (:comments . "link")))
```

Babel is really annoying when it comes to working with Scheme (via Geiser), it keeps asking about which Scheme implementation to use, I tried to set this in file local variables (with the) and dir-locals but it didn't work. This should work now!

```
1  (after! geiser
2    (setq geiser-default-implementation 'guile))
3
4  ;; stolen from https://github.com/yohan-pereira/.emacs#babel-config
5  (defun +org-confirm-babel-evaluate (lang body)
6    (not (string= lang "scheme"))) ;; don't ask for scheme
7
8  (setq org-confirm-babel-evaluate #'+org-confirm-babel-evaluate)
```

Abdelhak Bougouffa © 2022

Visual line / auto fill   By default, `visual-line-mode` is turned on, and `auto-fill-mode` off by a hook. However, this messes with tables in Org-mode, and other plain text files (e.g. markdown, LaTeX) so I'll turn it off for this, and manually enable it for more specific modes as desired.

```
1  (remove-hook 'text-mode-hook #'visual-line-mode)
2  (add-hook 'text-mode-hook #'auto-fill-mode)
```

EVIL   There also seem to be a few keybindings which use `hjkl`, but miss arrow key equivalents.

```
1  (map! :map evil-org-mode-map
2        :after evil-org
3        :n "g <up>" #'org-backward-heading-same-level
4        :n "g <down>" #'org-forward-heading-same-level
5        :n "g <left>" #'org-up-element
6        :n "g <right>" #'org-down-element)
```

```
1   (setq org-todo-keywords
2         '((sequence "IDEA(i)" "TODO(t)" "NEXT(n)" "PROJ(p)" "STRT(s)" "WAIT(w)" "HOLD(h)" "|" "DONE(d)" "KILL(k)")

20   "Select a member of an alist with multiple keys. Prettified.
21
22 TABLE is the alist which should contain entries where the car is a string.
23 There should be two types of entries.
24
25 1. prefix descriptions like (\"a\" \"Description\")
26    This indicates that `a' is a prefix key for multi-letter selection, and
27    that there are entries following with keys like \"ab\", \"ax\"…
28
29 2. Select-able members must have more than two elements, with the first
30    being the string of keys that lead to selecting it, and the second a
31    short description string of the item.
32
33 The command will then make a temporary buffer listing all entries
34 that can be selected with a single key, and all the single key
35 prefixes.  When you press the key for a single-letter entry, it is selected.
36 When you press a prefix key, the commands (and maybe further prefixes)
37 under this key will be shown and offered for selection.
38
39 TITLE will be placed over the selection in the temporary buffer,
40 PROMPT will be used when prompting for a key.  SPECIALS is an
41 alist with (\"key\" \"description\") entries.  When one of these
42 is selected, only the bare key is returned."

```

Org Roam Capture template

Snippet Helpers   I often want to set `src-block` headers, and it's a pain to:

- type them out

- remember what the accepted values are

- oh, and specifying the same language again and again

We can solve this in three steps:

- having one-letter snippets, conditioned on `(point)` being within a src header

- creating a nice prompt showing accepted values and the current default

- pre-filling the `src-block` language with the last language used

For header args, the keys I'll use are:

- `r` for `:results`

- `e` for `:exports`

- `v` for `:eval`

- `s` for `:session`

- d for :dir

```
1   (defun +yas/org-src-header-p ()
2     "Determine whether `point' is within a src-block header or header-args."
3     (pcase (org-element-type (org-element-context))
4       ('src-block (< (point) ; before code part of the src-block
5                     (save-excursion (goto-char (org-element-property :begin (org-element-context)))
6                                     (forward-line 1)
7                                     (point))))
8       ('inline-src-block (< (point) ; before code part of the inline-src-block
9                            (save-excursion (goto-char (org-element-property :begin (org-element-context)))
10                                            (search-forward "]{")
11                                            (point))))
12       ('keyword (string-match-p "^header-args" (org-element-property :value (org-element-context))))))
```

Now let's write a function we can reference in YASnippets to produce a nice interactive way to specify header arguments.

```
1   (defun +yas/org-prompt-header-arg (arg question values)
2     "Prompt the user to set ARG header property to one of VALUES with QUESTION.
3   The default value is identified and indicated. If either default is selected,
4   or no selection is made: nil is returned."
5     (let* ((src-block-p (not (looking-back "^#\\+property:[ \t]+header-args:.*" (line-beginning-position))))
6            (default
7              (or
8               (cdr (assoc arg
9                           (if src-block-p
10                              (nth 2 (org-babel-get-src-block-info t))
11                            (org-babel-merge-params
12                             org-babel-default-header-args
13                             (let ((lang-headers
14                                    (intern (concat "org-babel-default-header-args:"
15                                                    (+yas/org-src-lang)))))
16                              (when (boundp lang-headers) (eval lang-headers t)))))))
17               ""))
18            default-value)
19       (setq values (mapcar
20                     (lambda (value)
21                       (if (string-match-p (regexp-quote value) default)
22                          (setq default-value
23                                (concat value " "
24                                        (propertize "(default)" 'face 'font-lock-doc-face)))
25                        value))
26                     values))
27       (let ((selection (consult--read question values :default default-value)))
28         (unless (or (string-match-p "(default)$" selection)
29                     (string= "" selection))
30          selection))))
```

Finally, we fetch the language information for new source blocks.

Since we're getting this info, we might as well go a step further and also provide the ability to determine the most popular language in the buffer that doesn't have any `header-args` set for it (with `#+properties`).

```
1   (defun +yas/org-src-lang ()
2     "Try to find the current language of the src/header at `point'.
3   Return nil otherwise."
4     (let ((context (org-element-context)))
5       (pcase (org-element-type context)
6         ('src-block (org-element-property :language context))
7         ('inline-src-block (org-element-property :language context))
8         ('keyword (when (string-match "^header-args:\\([^ ]+\\)" (org-element-property :value context))
9                    (match-string 1 (org-element-property :value context)))))))
10
11  (defun +yas/org-last-src-lang ()
12    "Return the language of the last src-block, if it exists."
13    (save-excursion
```

```
14        (beginning-of-line)
15        (when (re-search-backward "^[ \t]*#\\+begin_src" nil t)
16          (org-element-property :language (org-element-context)))))))
17
18  (defun +yas/org-most-common-no-property-lang ()
19    "Find the lang with the most source blocks that has no global header-args, else nil."
20    (let (src-langs header-langs)
21      (save-excursion
22        (goto-char (point-min))
23        (while (re-search-forward "^[ \t]*#\\+begin_src" nil t)
24          (push (+yas/org-src-lang) src-langs))
25        (goto-char (point-min))
26        (while (re-search-forward "^[ \t]*#\\+property: +header-args" nil t)
27          (push (+yas/org-src-lang) header-langs)))
28
29      (setq src-langs
30            (mapcar #'car
31                    ;; sort alist by frequency (desc.)
32                    (sort
33                     ;; generate alist with form (value . frequency)
34                     (cl-loop for (n . m) in (seq-group-by #'identity src-langs)
35                              collect (cons n (length m)))
36                     (lambda (a b) (> (cdr a) (cdr b))))))
37
38      (car (cl-set-difference src-langs header-langs :test #'string=))))
```

Translate capital keywords to lower case Everyone used to use `#+CAPITAL` keywords. Then people realised that `#+lowercase` is actually both marginally easier and visually nicer, so now the capital version is just used in the manual.

> Org is standardized on lower case. Uppercase is used in the manual as a poor man's bold, and supported for historical reasons. — Nicolas Goaziou

```
1  (defun +org-syntax-convert-keyword-case-to-lower ()
2    "Convert all #+KEYWORDS to #+keywords."
3    (interactive)
4    (save-excursion
5      (goto-char (point-min))
6      (let ((count 0)
7            (case-fold-search nil))
8        (while (re-search-forward "^[ \t]*#\\+[A-Z_]+" nil t)
9          (unless (s-matches-p "RESULTS" (match-string 0))
10           (replace-match (downcase (match-string 0)) t)
11           (setq count (1+ count))))
12        (message "Replaced %d occurances" count))))
```

Org notifier Add support for `org-wild-notifier`.

```
1  (use-package! org-wild-notifier
2    :hook (org-load . org-wild-notifier-mode)
3    :config
4    (setq org-wild-notifier-alert-time '(60 30)))
```

9.2.3   Custom links

Sub-figures This defines a new link type `subfig` to enable exporting sub-figures to LaTeX, taken form "Export subfigures to LaTeX (and HTML)".

```
1  (org-link-set-parameters
2   "subfig"
3   :follow (lambda (file) (find-file file))
4   :face '(:foreground "chocolate" :weight bold :underline t)
5   :display 'full
6   :export
7   (lambda (file desc backend)
8     (when (eq backend 'latex)
9       (if (string-match ">(\\(.+\\))" desc)
10          (concat "\\begin{subfigure}[b]"
11                  "\\caption{" (replace-regexp-in-string "\s+>(.+)" "" desc) "}"
12                  "\\includegraphics" "[" (match-string 1 desc) "]" "{" file "}" "\\end{subfigure}")
13        (format "\\begin{subfigure}\\includegraphics{%s}\\end{subfigure}" desc file)))))
```

Example of usage:

```
#+caption: Lorem impsum dolor
#+attr_latex: :options \centering
#+begin_figure
[[subfig:img1.jpg][Caption of img1 >(width=.3\textwidth)]]

[[subfig:img2.jpg][Caption of img2 >(width=.3\textwidth)]]

[[subfig:img3.jpg][Caption of img3 >(width=.6\textwidth)]]
#+end_figure
```

LATEX inline markup   Needs to make a ?, with this hack you can write `[[latex:textsc][Some text]]`.

```
1  (org-add-link-type
2   "latex" nil
3   (lambda (path desc format)
4     (cond
5       ((eq format 'html)
6        (format "<span class=\"%s\">%s</span>" path desc))
7       ((eq format 'latex)
8        (format "\\%s{%s}" path desc)))))
```

9.2.4   Visuals

Here I try to do two things: improve the styling of the various documents, via font changes etc., and also propagate colours from the current theme.

Font display

Headings   Let's make the title and the headings a bit bigger:

```
1  (custom-set-faces!
2    '(org-document-title :height 1.2))
3
4  (custom-set-faces!
5    '(outline-1 :weight extra-bold :height 1.25)
6    '(outline-2 :weight bold :height 1.15)
7    '(outline-3 :weight bold :height 1.12)
8    '(outline-4 :weight semi-bold :height 1.09)
9    '(outline-5 :weight semi-bold :height 1.06)
10   '(outline-6 :weight semi-bold :height 1.03)
11   '(outline-8 :weight semi-bold)
12   '(outline-9 :weight semi-bold))
```

Deadlines   It seems reasonable to have deadlines in the error face when they're passed.

```
1  (setq org-agenda-deadline-faces
2        '((1.001 . error)
3          (1.000 . org-warning)
4          (0.500 . org-upcoming-deadline)
5          (0.000 . org-upcoming-distant-deadline)))
```

Font styling   We can then have quote blocks stand out a bit more by making them *italic*.

```
1  (setq org-fontify-quote-and-verse-blocks t)
```

While `org-hide-emphasis-markers` is very nice, it can sometimes make edits which occur at the border a bit more fiddley. We can improve this situation without sacrificing visual amenities with the `org-appear` package.

```
1  (use-package! org-appear
2    :hook (org-mode . org-appear-mode)
3    :config
4    (setq org-appear-autoemphasis t
5          org-appear-autosubmarkers t
6          org-appear-autolinks nil)
7    ;; for proper first-time setup, `org-appear--set-elements'
8    ;; needs to be run after other hooks have acted.
9    (run-at-time nil nil #'org-appear--set-elements))
```

```
1  (setq org-inline-src-prettify-results '("" . "")
2        doom-themes-org-fontify-special-tags nil)
```

Inline blocks

```
1   (use-package! org-modern
2     :hook (org-mode . org-modern-mode)
3     :config
4     (setq org-modern-star '("" "" "" "" "" "" "" "")
5           org-modern-table-vertical 1
6           org-modern-table-horizontal 1
7           org-modern-list '((43 . "")
8                             (45 . "–")
9                             (42 . "•"))
10          org-modern-footnote (cons nil (cadr org-script-display))
11          org-modern-priority nil
12          org-modern-horizontal-rule t
13          org-modern-todo-faces
14          '(("TODO" :inverse-video t :inherit org-todo)

```

Org Modern

Not let's remove the overlap between the substitutions we set here and those that Doom applies via `:ui ligatures` and `:lang org`.

```
1   (defadvice! +org-init-appearance-h--no-ligatures-a ()
2     :after #'+org-init-appearance-h
3     (set-ligatures! 'org-mode
4       :name nil
5       :src_block nil
6       :src_block_end nil
7       :quote nil
8       :quote_end nil))
```

We'll bind this to `O` on the `org-mode` localleader, and manually apply a PR recognising the pgtk window system.

```
1   (use-package! org-ol-tree
2     :commands org-ol-tree
3     :config
4     (setq org-ol-tree-ui-icon-set
```

```
5            (if (and (display-graphic-p)
6                     (fboundp 'all-the-icons-material))
7                'all-the-icons
8              'unicode))
9    (org-ol-tree-ui--update-icon-set))
10
11   (map! :map org-mode-map
12         :after org
13         :localleader
14         :desc "Outline" "O" #'org-ol-tree)
```

```
1    ;; From https://www.reddit.com/r/orgmode/comments/i6hl8b/comment/g1vsef2/
2    ;; Scale image previews to 60% of the window width.
3    (setq org-image-actual-width (truncate (* (window-pixel-width) 0.6)))
```

Image previews

List bullet sequence   I think it makes sense to have list bullets change with depth

```
1    (setq org-list-demote-modify-bullet
2          '(("+" . "-")
3            ("-" . "+")
4            ("*" . "+")
5            ("1." . "a.")))
```

```
1    ;; Org styling, hide markup etc.
2    (setq org-hide-emphasis-markers t
3          org-pretty-entities t
4          org-ellipsis " "
5          org-hide-leading-stars t)
6    ;; org-priority-highest ?A

8    ;; org-priority-faces
9    ;; '((?A . 'all-the-icons-red)
10   ;;   (?B . 'all-the-icons-orange)
11   ;;   (?C . 'all-the-icons-yellow)
12   ;;   (?D . 'all-the-icons-green)
13   ;;   (?E . 'all-the-icons-blue)))
```

Symbols

LATEX fragments

Prettier highlighting   First off, we want those fragments to look good.

```
1    (setq org-highlight-latex-and-related '(native script entities))
```

However, by using `native` highlighting the `org-block` face is added, and that doesn't look too great — particularly when the fragments are previewed.

Ideally `org-src-font-lock-fontify-block` wouldn't add the `org-block` face, but we can avoid advising that entire function by just adding another face with `:inherit default` which will override the background color.

Inspecting `org-do-latex-and-related` shows that `"latex"` is the language argument passed, and so we can override the background as discussed above.

```
1  (require 'org-src)
2  (add-to-list 'org-src-block-faces '("latex" (:inherit default :extend t)))
```

Prettier rendering   It's nice to customize the look of LaTeX fragments.

```
1   ;; (setq org-format-latex-header "\\documentclass{article}
2   ;; \\usepackage[svgnames]{xcolor}
3   ;; \\usepackage[T1]{fontenc}
4   ;; \\usepackage{booktabs}
5
6   ;; \\pagestyle{empty} % do not remove
7
8   ;; \\setlength{\\textwidth}{\\paperwidth}
9   ;; \\addtolength{\\textwidth}{-3cm}
10  ;; \\setlength{\\oddsidemargin}{1.5cm}
11  ;; \\addtolength{\\oddsidemargin}{-2.54cm}
12  ;; \\setlength{\\evensidemargin}{\\oddsidemargin}
13  ;; \\setlength{\\textheight}{\\paperheight}
14  ;; \\addtolength{\\textheight}{-\\headheight}
15  ;; \\addtolength{\\textheight}{-\\headsep}
16  ;; \\addtolength{\\textheight}{-\\footskip}
17  ;; \\addtolength{\\textheight}{-3cm}
18  ;; \\setlength{\\topmargin}{1.5cm}
19  ;; \\addtolength{\\topmargin}{-2.54cm}
20  ;; \\usepackage{arev}
21  ;; ")
```

Since we can, instead of making the background color match the `default` face, let's make it transparent.

```
1   (setq org-format-latex-options
2         (plist-put org-format-latex-options :background "Transparent"))
3
4   ;; Can be dvipng, dvisvgm, imagemagick
5   (setq org-preview-latex-default-process 'dvisvgm)
6
7   ;; Define a function to set the format latex scale (to be reused in hooks)
8   (defun +org-format-latex-set-scale (scale)
9     (setq org-format-latex-options (plist-put org-format-latex-options :scale scale)))
10
11  ;; Set the default scale
12  (+org-format-latex-set-scale 1.4)
13
14  ;; Increase scale in Zen mode
15  (when (featurep! :ui zen)
16    (add-hook! 'writeroom-mode-enable-hook (+org-format-latex-set-scale 2.0))
17    (add-hook! 'writeroom-mode-disable-hook (+org-format-latex-set-scale 1.4)))
```

Better equation numbering   Numbered equations all have (1) as the number for fragments with vanilla org-mode. This code (from scimax) injects the correct numbers into the previews so they look good. **Not working right now!**

```
1  (defun +scimax-org-renumber-environment (orig-func &rest args)
2    "A function to inject numbers in LaTeX fragment previews."
3    (let ((results '())
4          (counter -1)
5          (numberp))

9.2.6 Exporting

General settings By default Org only exports the first three levels of headings as … headings. This is rather unfortunate as my documents frequently stray far beyond three levels of depth. The two main formats I care about exporting to are LaTeX and HTML. When using an `article` class, LaTeX headlines go from `\section`, `\subsection`, `\subsubsection`, and `\paragraph` to `\subgraph` — *five* levels. HTML5 has six levels of headings (`<h1>` to `<h6>`), but first level Org headings get exported as `<h2>` elements — leaving *five* usable levels.

As such, it would seem to make sense to recognize the first *five* levels of Org headings when exporting.

```
1  (setq org-export-headline-levels 5) ;; I like nesting
```

I'm also going to make use of an item in `ox-extra` so that I can add an `:ignore:` tag to headings for the content to be kept, but the heading itself ignored (unlike `:noexport:` which ignored both heading and content). This is useful when I want to use headings to provide a structure for writing that doesn't appear in the final documents.

```
1  (require 'ox-extra)
2  (ox-extras-activate '(ignore-headlines))
```

Since I (roughly) track Org `HEAD`, it makes sense to include the git version in the creator string.

```
1  (setq org-export-creator-string
2        (format "Emacs %s (Org mode %s)" emacs-version (org-release)))
```

LaTeX export

Compiling By default Org uses `pdflatex` × 3 + `bibtex`. This simply won't do in our modern world. `latexmk` + `biber` (which is used automatically with `latexmk`) is a simply superior combination.

```
1  ;; `org-latex-compilers' contains a list of possible values ("pdflatex" "xelatex" "lualatex")
2  ;; for the `%latex' argument.
3  (setq org-latex-pdf-process '("latexmk -shell-escape -pdf -quiet -f -%latex -interaction=nonstopmode
↪  -output-directory=%o %f"))
```

```
1  ;; Add 'svg' package to display SVG pictures (uses inkscape, imagemagik and ghostscript)
2  ;; (add-to-list 'org-latex-packages-alist '("" "svg"))
3  ;; (add-to-list 'org-latex-packages-alist '("" "fontspec")) ;; for xelatex
4  ;; (add-to-list 'org-latex-packages-alist '("utf8" "inputenc"))
```

Org LaTeX packages

```
1  ;; this is for code syntax highlighting in export. you need to use
2  ;; -shell-escape with latex, and install pygments.
3  ;; (add-to-list 'org-latex-packages-alist '("svgnames" "xcolor"))
4  ;; (add-to-list 'org-latex-packages-alist '("" "minted"))
5
6  ;; (setq org-latex-listings 'minted) ;; Per document, in local variables
7  (setq org-latex-minted-options '(("frame" "lines")
8                                   ("fontsize" "\\footnotesize")
9                                   ("tabsize" "2")
10                                  ("breaklines" "")
11                                  ("breakanywhere" "") ;; break anywhere, no just on spaces
```

82                   ("\\paragraph{%s}" . "\\paragraph*{%s}"))))
83
84  (setq org-latex-default-class "article")
85  ;; org-latex-tables-booktabs t
86  ;; org-latex-reference-command "\\cref{%s}")
```

Class templates

Hugo   Update files with last modified date, when `#+lastmod:` is available

```
1  (setq time-stamp-active t
2        time-stamp-start "#\\+lastmod:[ \t]*"
3        time-stamp-end "$"
4        time-stamp-format "%04Y-%02m-%02d")
5
6  (add-hook 'before-save-hook 'time-stamp nil)
```

9.3   Text editing

9.3.1   Plain text

It's nice to see ANSI color codes displayed. However, until Emacs 28 it's not possible to do this without modifying the buffer, so let's condition this block on that.

```
1  (after! text-mode
2    (add-hook! 'text-mode-hook
3      (unless (derived-mode-p 'org-mode)
4        ;; Apply ANSI color codes
5        (with-silent-modifications
6          (ansi-color-apply-on-region (point-min) (point-max) t)))))
```

9.3.2 Academic phrases

When writing your academic paper, you might get stuck trying to find the right phrase that captures your intention. This package tries to alleviate that problem by presenting you with a list of phrases organized by the topic or by the paper section that you are writing. This package has around 600 phrases so far.

This is based on the book titled "English for Writing Research - Papers Useful Phrases".

```
1  (use-package! academic-phrases
2    :commands (academic-phrases
3              academic-phrases-by-section))
```

9.3.3 Quarto

Integration of Quarto in Emacs.

```
1  (package! quarto-mode)
```

```
1  (use-package! quarto-mode
2    :when QUARTO-OK-P)
```

10 System configuration

10.1 Mime types

10.1.1 Org mode files

Org mode isn't recognized as its own mime type by default, but that can easily be changed with the following file. For system-wide changes try `/usr/share/mime/packages/org.xml`.

```
1  <mime-info xmlns='http://www.freedesktop.org/standards/shared-mime-info'>
2    <mime-type type="text/org">
3      <comment>Emacs Org-mode File</comment>
4      <glob pattern="*.org"/>
5      <alias type="text/org"/>
6    </mime-type>
7  </mime-info>
```

What's nice is that Papirus now has an icon for `text/org`. One simply needs to refresh their mime database:

```
1  update-mime-database ~/.local/share/mime
```

Then set Emacs as the default editor:

```
1  xdg-mime default emacs-client.desktop text/org
```

10.1.2 Registering `org-protocol://`

The recommended method of registering a protocol is by registering a desktop application, which seems reasonable.

```
1  [Desktop Entry]
2  Name=Emacs Org-Protocol
3  Exec=emacsclient %u
4  Icon=/home/hacko/.doom.d/assets/org-mode.svg
```

Abdelhak Bougouffa © 2022

```
5   Type=Application
6   Terminal=false
7   MimeType=x-scheme-handler/org-protocol
```

To associate `org-protocol://` links with the desktop file:

```
1   xdg-mime default org-protocol.desktop x-scheme-handler/org-protocol
```

10.1.3 Configuring Chrome/Brave

As specified in the official documentation, we would like to invoke the `org-protocol://` without confirmation. To do this, we need to add this system-wide configuration.

```
1   read -p "Do you want to set Chrome/Brave to show the 'Always open ...' checkbox, to be used with the
    ↪  'org-protocol://' registration? [Y | N]: " INSTALL_CONFIRM
2
3   if [[ $INSTALL_CONFIRM == "Y" ]]
4   then
5     sudo mkdir -p /etc/opt/chrome/policies/managed/
6
7     sudo tee /etc/opt/chrome/policies/managed/external_protocol_dialog.json > /dev/null <<'EOF'
8     {
9     "ExternalProtocolDialogShowAlwaysOpenCheckbox": true
10    }
11  EOF
12
13    sudo chmod 644 /etc/opt/chrome/policies/managed/external_protocol_dialog.json
14  fi
```

Then add a bookmarklet in your browser with this code:

```
1   javascript:location.href =
2       'org-protocol://roam-ref?template=r&ref='
3       + encodeURIComponent(location.href)
4       + '&title='
5       + encodeURIComponent(document.title)
6       + '&body='
7       + encodeURIComponent(window.getSelection())
```

10.2 Git

10.2.1 Git diffs

Based on this gist and this article.

```
1   *.tex                    diff=tex
2   *.bib                    diff=bibtex
3   *.{c,h,c++,h++,cc,hh,cpp,hpp} diff=cpp
4   *.m                      diff=matlab
5   *.py                     diff=python
6   *.rb                     diff=ruby
7   *.php                    diff=php
8   *.pl                     diff=perl
9   *.{html,xhtml}           diff=html
10  *.f                      diff=fortran
11  *.{el,lisp,scm}          diff=lisp
12  *.r                      diff=rstats
13  *.texi*                  diff=texinfo
14  *.org                    diff=org
15  *.rs                     diff=rust
16
```

```
17   *.odt                      diff=odt
18   *.odp                      diff=libreoffice
19   *.ods                      diff=libreoffice
20   *.doc                      diff=doc
21   *.xls                      diff=xls
22   *.ppt                      diff=ppt
23   *.docx                     diff=docx
24   *.xlsx                     diff=xlsx
25   *.pptx                     diff=pptx
26   *.rtf                      diff=rtf
27
28   *.{png,jpg,jpeg,gif}       diff=exif
29
30   *.pdf                      diff=pdf
31   *.djvu                     diff=djvu
32   *.epub                     diff=pandoc
33   *.chm                      diff=tika
34   *.mhtml?                   diff=tika
35
36   *.{class,jar}              diff=tika
37   *.{rar,7z,zip,apk}         diff=tika
```

Then adding some regular expressions for it to `~/.config/git/config`, with some tools to view diffs on binary files.

```
1    # ====== TEXT FORMATS ======

10.2.2 Apache Tika App wrapper

Apache Tika is a content detection and analysis framework. It detects and extracts metadata and text from over a thousand different file types. We will be using the Tika App in command-line mode to show some meaningful diff information for some binary files.

First, let's add a custom script to run `tika-app`:

```sh
1  #!/bin/sh
2  APACHE_TIKA_JAR="$HOME/.local/share/tika/tika-app.jar"
3
4  if [ -f ${APACHE_TIKA_JAR} ]
5  then
6    exec java -Dfile.encoding=UTF-8 -jar ${APACHE_TIKA_JAR} "$@" 2>/dev/null
7  else
8    echo "JAR file not found at ${APACHE_TIKA_JAR}"
9  fi
```

Add `tika`'s installation instructions to the `setup.sh` file.

```sh
1  update_apache_tika () {
2    TIKA_JAR_PATH=$HOME/.local/share/tika
3
4    if [ ! -d ${TIKA_JAR_PATH} ]
5    then
6      mkdir -p ${TIKA_JAR_PATH}
7    fi
8
9    TIKA_BASE_URL=https://archive.apache.org/dist/tika/
10   TIKA_JAR_LINK="${TIKA_JAR_PATH}/tika-app.jar"
11
12   echo -n "Checking for new Apache Tika App version... "
13
14   # Get the lastest version
15   TIKA_VERSION=$(
16     curl -s ${TIKA_BASE_URL} | # Get the page
17     pandoc -f html -t plain | # Convert HTML page to plain text.
18     awk '/([0-9]+\.)+[0-1]\// {print substr($1, 0, length($1)-1)}' | # Get the versions directories (pattern:
     ↪ X.X.X/)
19     sort -rV | # Sort versions, the newest first
20     head -n 1 # Get the first (newest) version
21   )
22
23   if [ -z ${TIKA_VERSION} ]
24   then
25     echo "Failed, check your internet connection."
26     exit 1
27   fi
28
29   echo "Lastest version is ${TIKA_VERSION}"
30
31   TIKA_JAR="${TIKA_JAR_PATH}/tika-app-${TIKA_VERSION}.jar"
32   TIKA_JAR_URL="${TIKA_BASE_URL}${TIKA_VERSION}/tika-app-${TIKA_VERSION}.jar"
33
34   if [ ! -f ${TIKA_JAR} ]
35   then
36     echo "New version available!"
37     read -p "Do you want to download Apache Tika App v${TIKA_VERSION}? [Y | N]: " INSTALL_CONFIRM
38     if [[ $INSTALL_CONFIRM == "Y" ]]
39     then
40       curl -o ${TIKA_JAR} ${TIKA_JAR_URL} && echo "Apache Tika App v${TIKA_VERSION} downloaded successfully"
41     fi
42   else
43     echo "Apache Tika App is up-to-date, version ${TIKA_VERSION} already downloaded to '${TIKA_JAR}'"
44   fi
45
46   # Check the existance of the symbolic link
47   if [ -L ${TIKA_JAR_LINK} ]
48   then
49     unlink ${TIKA_JAR_LINK}
50   fi
51
52   # Create a symbolic link to the installed version
53   ln -s ${TIKA_JAR} ${TIKA_JAR_LINK}
54  }
55
56  update_apache_tika;
```

When it detects that Tesseract is installed, Tika App will try to extract text from some file types. For some reason, it tries to use Tesseract with some compressed files like `*.bz2`, `*.apk`… etc. I would like to disable this feature by exporting an XML config file which will be used when launching the Tika App (using `--config=<tika-config.xml>`).

```xml
1  <?xml version="1.0" encoding="UTF-8"?>
2  <properties>
3    <parsers>
4      <parser class="org.apache.tika.parser.DefaultParser">
5        <parser-exclude class="org.apache.tika.parser.ocr.TesseractOCRParser"/>
6      </parser>
7    </parsers>
8  </properties>
```

10.3 Emacs' Systemd daemon

Let's define a Systemd service to launch Emacs server automatically.

```
1   [Unit]
2   Description=Emacs server daemon
3   Documentation=info:emacs man:emacs(1) https://gnu.org/software/emacs/
4
5   [Service]
6   Type=forking
7   ExecStart=sh -c 'emacs --daemon && emacsclient -c --eval "(delete-frame)"'
8   ExecStop=/usr/bin/emacsclient --no-wait --eval "(progn (setq kill-emacs-hook nil) (kill-emacs))"
9   Restart=on-failure
10
11  [Install]
12  WantedBy=default.target
```

Which is then enabled by:

```
1  systemctl --user enable emacs.service
```

For some reason if a frame isn't opened early in the initialization process, the daemon doesn't seem to like opening frames later — hence the `&& emacsclient` part of the `ExecStart` value.

10.4 Emacs Client

10.4.1 Desktop integration

It can now be nice to use this as a 'default app' for opening files. If we add an appropriate desktop entry, and enable it in the desktop environment.

```
1   [Desktop Entry]
2   Name=Emacs (Client)
3   GenericName=Text Editor
4   Comment=A flexible platform for end-user applications
5   MimeType=text/english;text/plain;text/org;text/x-makefile;text/x-c++hdr;text/x-c++src;text/x-chdr;text/x-csrc;t↲
    ↪ ext/x-java;text/x-moc;text/x-pascal;text/x-tcl;text/x-tex;application/x-shellscript;text/x-c;text/x-c++;
6   Exec=emacsclient -create-frame --frame-parameters="'(fullscreen . maximized)"
    ↪ --alternate-editor="/usr/bin/emacs" --no-wait %F
7   Icon=emacs
8   Type=Application
9   Terminal=false
10  Categories=TextEditor;Utility;
11  StartupWMClass=Emacs
12  Keywords=Text;Editor;
13  X-KDE-StartupNotify=false
```

10.4.2   Command-line wrapper

A wrapper around `emacsclient`:

- Accepting `stdin` by putting it in a temporary file and immediately opening it.

- Guessing that the `tty` is a good idea when `$DISPLAY` is unset (relevant with SSH sessions, among other things).

- With a whiff of 24-bit color support, sets `TERM` variable to a `terminfo` that (probably) announces 24-bit color support.

- Changes GUI `emacsclient` instances to be non-blocking by default (`--no-wait`), and instead take a flag to suppress this behavior (`-w`).

I would use `sh`, but using arrays for argument manipulation is just too convenient, so I'll raise the requirement to `bash`. Since arrays are the only 'extra' compared to `sh`, other shells like `ksh` etc. should work too.

```bash
#!/usr/bin/env bash
force_tty=false
force_wait=false
stdin_mode=""

args=()

usage () {
  echo -e "Usage: e [-t] [-m MODE] [OPTIONS] FILE [-]

Emacs client convenience wrapper.

Options:
-h, --help            Show this message
-t, -nw, --tty        Force terminal mode
-w, --wait            Don't supply --no-wait to graphical emacsclient
-                     Take stdin (when last argument)
-m MODE, --mode MODE  Mode to open stdin with
-mm, --maximized      Start Emacs client in maximized window

Run emacsclient --help to see help for the emacsclient."
}

while :
do
  case "$1" in
    -t | -nw | --tty)
      force_tty=true
      shift ;;
    -w | --wait)
      force_wait=true
      shift ;;
    -m | --mode)
      stdin_mode=" ($2-mode)"
      shift 2 ;;
    -mm | --maximized)
        args+=("--frame-parameters='(fullscreen . maximized)")
        shift ;;
    -h | --help)
      usage
      exit 0 ;;
    --*=*)
      set -- "$@" "${1%%=*}" "${1#*=}"
      shift ;;
    *)
      [ "$#" = 0 ] && break
      args+=("$1")
      shift ;;
  esac
done

```

```
52  if [ ! "${#args[*]}" = 0 ] && [ "${args[-1]}" = "-" ]
53  then
54    unset 'args[-1]'
55    TMP="$(mktemp /tmp/emacsstdin-XXX)"
56    cat > "$TMP"
57    args+=(--eval "(let ((b (generate-new-buffer \"*stdin*\"))) (switch-to-buffer b) (insert-file-contents
    ↪ \"$TMP\") (delete-file \"$TMP\")${stdin_mode})")
58  fi
59
60  if [ -z "$DISPLAY" ] || $force_tty
61  then
62    # detect terminals with sneaky 24-bit support
63    if { [ "$COLORTERM" = truecolor ] || [ "$COLORTERM" = 24bit ]; } \
64      && [ "$(tput colors 2>/dev/null)" -lt 257 ]
65    then
66      if echo "$TERM" | grep -q "^\w\+-[0-9]"
67      then
68        termstub="${TERM%%-*}"
69      else
70        termstub="${TERM#*-}"
71      fi
72
73      if infocmp "$termstub-direct" >/dev/null 2>&1
74      then
75        TERM="$termstub-direct"
76      else
77        TERM="xterm-direct"
78      fi # should be fairly safe
79    fi
80
81    emacsclient --tty -create-frame --alternate-editor="/usr/bin/emacs" "${args[@]}"
82  else
83    if ! $force_wait
84    then
85      args+=(--no-wait)
86    fi
87
88    emacsclient -create-frame --alternate-editor="/usr/bin/emacs" "${args[@]}"
89  fi
```

Useful aliases   Now, to set an alias to use e with magit, and then for maximum laziness we can set aliases for the terminal-forced variants.

```
1  # Aliases to run emacs+magit
2  alias magit='e --eval "(progn (magit-status) (delete-other-windows))"'
3  alias magitt='e -t --eval "(progn (magit-status) (delete-other-windows))"'
4
5  # Aliases to run emacs+mu4e
6  alias emu='e --eval "(progn (=mu4e) (delete-other-windows))"'
7  alias emut='e -t --eval "(progn (=mu4e) (delete-other-windows))"'
```

And this to launch Emacs in terminal mode et, I use this as a default $EDITOR

```
1  #!/usr/bin/env bash
2  e -t "$@"
```

And ev for use with $VISUAL:

```
1  #!/usr/bin/env bash
2  e -w "$@"
```

```
1   export EDITOR=$HOME/.local/bin/et
2   # export VISUAL=$HOME/.local/bin/ev
```

10.5   AppImage

Install/update the `appimageupdatetool.AppImage` tool:

```
1   update_appimageupdatetool () {
2     TOOL_NAME=appimageupdatetool
3     MACHINE_ARCH=$(uname -m)
4     APPIMAGE_UPDATE_TOOL_PATH="$HOME/.local/bin/${TOOL_NAME}"
5     APPIMAGE_UPDATE_TOOL_URL="https://github.com/AppImage/AppImageUpdate/releases/download/continuous/${TOOL_NAME⌋
    ↪  }-${MACHINE_ARCH}.AppImage"
6
7     if [ -f ${APPIMAGE_UPDATE_TOOL_PATH} ] && $APPIMAGE_UPDATE_TOOL_PATH -j ${APPIMAGE_UPDATE_TOOL_PATH}
    ↪  2&>/dev/null
8     then
9       echo "${TOOL_NAME} already up to date"
10    else
11      if [ -f ${APPIMAGE_UPDATE_TOOL_PATH} ]
12      then
13        echo "Update available, downloading latest ${MACHINE_ARCH} version to ${APPIMAGE_UPDATE_TOOL_PATH}"
14        mv ${APPIMAGE_UPDATE_TOOL_PATH} "${APPIMAGE_UPDATE_TOOL_PATH}.backup"
15      else
16        echo "${TOOL_NAME} not found, downloading latest ${MACHINE_ARCH} version to ${APPIMAGE_UPDATE_TOOL_PATH}"
17      fi
18      wget -O ${APPIMAGE_UPDATE_TOOL_PATH} ${APPIMAGE_UPDATE_TOOL_URL} && # 2&>/dev/null
19          echo "Downloaded ${TOOL_NAME}-${MACHINE_ARCH}.AppImage" &&
20          [ -f "${APPIMAGE_UPDATE_TOOL_PATH}.backup" ] &&
21          rm "${APPIMAGE_UPDATE_TOOL_PATH}.backup"
22      chmod a+x ${APPIMAGE_UPDATE_TOOL_PATH}
23    fi
24  }
25
26  update_appimageupdatetool;
```

10.6   Oh-my-Zsh

10.6.1   Path

Path to your oh-my-zsh installation.

```
1   export ZSH="$HOME/.oh-my-zsh"
```

10.6.2   Themes and customization:

Set name of the theme to load, if set to `"random"`, it will load a random theme each time oh-my-zsh is loaded, in which case, to know which specific one was loaded, run: `echo $RANDOM_THEME` See github.com/ohmyzsh/ohmyzsh/wiki/Themes.

```
1   # Typewritten customizations
2   TYPEWRITTEN_RELATIVE_PATH="adaptive"
3   TYPEWRITTEN_CURSOR="underscore"
4
5   ZSH_THEME="typewritten/typewritten"
6
7   # Set list of themes to pick from when loading at random
8   # Setting this variable when ZSH_THEME=random will cause zsh to load
9   # a theme from this variable instead of looking in $ZSH/themes/
10  # If set to an empty array, this variable will have no effect.
11  # ZSH_THEME_RANDOM_CANDIDATES=( "robbyrussell" "agnoster" )
```

10.6.3   Behavior

```
1   # Uncomment the following line to use case-sensitive completion.
2   # CASE_SENSITIVE="true"
3
4   # Uncomment the following line to use hyphen-insensitive completion.
5   # Case-sensitive completion must be off. _ and - will be interchangeable.
6   # HYPHEN_INSENSITIVE="true"
7
8   # Uncomment the following line to disable bi-weekly auto-update checks.
9   # DISABLE_AUTO_UPDATE="true"
10
11  # Uncomment the following line to automatically update without prompting.
12  DISABLE_UPDATE_PROMPT="true"
13
14  # Uncomment the following line to change how often to auto-update (in days).
15  export UPDATE_ZSH_DAYS=3
16
17  # Uncomment the following line if pasting URLs and other text is messed up.
18  # DISABLE_MAGIC_FUNCTIONS="true"
19
20  # Uncomment the following line to disable colors in ls.
21  # DISABLE_LS_COLORS="true"
22
23  # Uncomment the following line to disable auto-setting terminal title.
24  # DISABLE_AUTO_TITLE="true"
25
26  # Uncomment the following line to enable command auto-correction.
27  # ENABLE_CORRECTION="true"
28
29  # Uncomment the following line to display red dots whilst waiting for completion.
30  # COMPLETION_WAITING_DOTS="true"
31
32  # Uncomment the following line if you want to disable marking untracked files
33  # under VCS as dirty. This makes repository status check for large repositories
34  # much, much faster.
35  # DISABLE_UNTRACKED_FILES_DIRTY="true"
36
37  # Uncomment the following line if you want to change the command execution time
38  # stamp shown in the history command output.
39  # You can set one of the optional three formats:
40  # "mm/dd/yyyy"|"dd.mm.yyyy"|"yyyy-mm-dd"
41  # or set a custom format using the strftime function format specifications,
42  # see 'man strftime' for details.
43  # HIST_STAMPS="mm/dd/yyyy"
```

10.6.4   Plugins

```
1   # Would you like to use another custom folder than $ZSH/custom?
2   ZSH_CUSTOM=$HOME/.config/my_ohmyzsh_customizations
3
4   # Which plugins would you like to load?
5   # Standard plugins can be found in $ZSH/plugins/
6   # Custom plugins may be added to $ZSH_CUSTOM/plugins/
7   # Example format: plugins=(rails git textmate ruby lighthouse)
8   # Add wisely, as too many plugins slow down shell startup.
9   plugins=(
10    zsh-autosuggestions
11    zsh-navigation-tools
12    zsh-interactive-cd
13    archlinux
14    ssh-agent
15    sudo
16    docker
17    systemd
18    tmux
```

Abdelhak Bougouffa © 2022

```
19     python
20     pip
21     rust
22     repo
23     git
24     cp
25     rsync
26     ripgrep
27     fzf
28     fd
29     z
30   )
```

10.6.5 Bootstrap Oh-my-Zsh

```
1  source $ZSH/oh-my-zsh.sh
```

10.6.6 Aliases

```
1  # Aliases
2  alias zshconfig="vim ~/.zshrc"
3  alias ohmyzsh="ranger $ZSH"
```

10.7 Zsh user configuration

10.7.1 `pbcopy` and `pbpaste`

I like to define MacOS-like commands (`pbcopy` and `pbpaste`) to copy and paste in terminal (from `stdin`, to `stdout`). The `pbcopy` and `pbpaste` are defined using either `xclip` or `xsel`, you would need to install these tools, otherwise we wouldn't define the aliases.

```
1  # Define aliases to 'pbcopy' and 'pbpaste'
2  if command -v xclip &> /dev/null
3  then
4    # Define aliases using xclip
5    alias pbcopy='xclip -selection clipboard'
6    alias pbpaste='xclip -selection clipboard -o'
7  elif command -v xsel &> /dev/null
8  then
9    # Define aliases using xsel
10   alias pbcopy='xsel --clipboard --input'
11   alias pbpaste='xsel --clipboard --output'
12  fi
```

10.7.2 `netpaste`

Define a `netpaste` command to paste to a Pastebin server.

```
1  alias netpaste='curl -F file=@- 0x0.st' # OR 'curl -F f:1=<- ix.io '
```

10.7.3 Sudo GUI!

And then define `gsuon` and `gsuoff` aliases to run graphical apps from terminal with root permissions, this requires `xhost`.

```
1  # To run GUI apps from terminal with root permissions
2  if command -v xhost &> /dev/null
3  then
4    alias gsuon='xhost si:localuser:root'
5    alias gsuoff='xhost -si:localuser:root'
6  fi
```

10.7.4 Neovim

Use Neovim instead of VIM to provide `vi` and `vim` commands.

```
1  # NeoVim
2  if command -v nvim &> /dev/null
3  then
4    alias vim="nvim"
5    alias vi="nvim"
6  fi
```

10.7.5 ESP-IDF

Add some aliases to work with the ESP-IDF framework.

```
1  if [ -d $HOME/Softwares/src/esp-idf/ ]
2  then
3    alias esp-prepare-env='source $HOME/Softwares/src/esp-idf/export.sh'
4    alias esp-update='echo "Updating ESP-IDF framework..." && cd $HOME/src/esp-idf && git pull --all && echo
   ↪  "Updated successfully"'
5  else
6    alias esp-prepare-env='echo "esp-idf repo not found. You can clone the esp-idf repo using git clone
   ↪  https://github.com/espressif/esp-idf.git"'
7    alias esp-update=esp-prepare-env
8  fi
```

10.7.6 CLI wttrin client

Define an alias to get weather information for my city:

```
1  export WTTRIN_CITY=Orsay
2
3  alias wttrin='curl wttr.in/$WTTRIN_CITY'
4  alias wttrin2='curl v2.wttr.in/$WTTRIN_CITY'
```

10.7.7 Minicom

Enable Meta key and colors in `minicom`:

```
1  export MINICOM='-m -c on'
```

10.7.8 Rust

Define Rust sources path, and add packages installed from `cargo` to the `PATH`.

```
1  export RUST_SRC_PATH=$HOME/.rustup/toolchains/stable-x86_64-unknown-linux-gnu/lib/rustlib/src/rust/src/
2  export PATH=$PATH:$HOME/.cargo/bin
```

I'm using the AUR package `clang-format-static-bin`, which provide multiple versions of Clang-format, I use it with some work projects requiring a specific version of Clang-format.

10.7.9 Clang-format

```
1  export PATH=$PATH:/opt/clang-format-static
```

10.7.10 CMake

Add my manually installed libraries to CMake and `PATH`.

```
1  export CMAKE_PREFIX_PATH=$HOME/Softwares/src/install
2  export PATH=$PATH:$HOME/Softwares/src/install/bin
```

10.7.11 Node

Set NPM installation path to local:

```
1   NPM_PACKAGES="${HOME}/.npm-packages"
2
3   # Export NPM bin path
4   export PATH="$PATH:$NPM_PACKAGES/bin"
5
6   # Preserve MANPATH if you already defined it somewhere in your config.
7   # Otherwise, fall back to `manpath` so we can inherit from `/etc/manpath`.
8   export MANPATH="${MANPATH-$(manpath)}:$NPM_PACKAGES/share/man"
9
10  # Tell Node about these packages
11  export NODE_PATH="$NPM_PACKAGES/lib/node_modules:$NODE_PATH"
```

Tell NPM to use this directory for its global package installs by adding this in `~/.npmrc`:

```
1  prefix = ~/.npm-packages
```

Some useful stuff (`fzf`, `opam`, Doom Emacs…)

10.7.12 tmux

I like to use `tmux` by default, even on my local sessions, I like to start a `tmux` in a `default` session on the first time I launch a terminal, and then, attach any other terminal to this default session:

```
1  # If not running inside Emacs (via vterm/eshell...)
2  if [ -z $INSIDE_EMACS ]
3  then
4    if command -v tmux &> /dev/null && [ -z "$TMUX" ]
5    then
6      tmux attach -t default || tmux new -s default
7    fi
8  fi
```

10.7.13   Other stuff

```
1   # You may need to manually set your language environment
2   # export LANG=en_US.UTF-8
3
4   # Preferred editor for local and remote sessions
5   # if [[ -n $SSH_CONNECTION ]]; then
6   #    export EDITOR='vim'
7   # else
8   #    export EDITOR='mvim'
9   # fi
10
11  # Compilation flags
12  # export ARCHFLAGS="-arch x86_64"
13
14  # FZF
15  [ -f ~/.fzf.zsh ] && source ~/.fzf.zsh
16
17  # OPAM configuration
18  [[ ! -r $HOME/.opam/opam-init/init.zsh ]] || source $HOME/.opam/opam-init/init.zsh > /dev/null 2> /dev/null
19
20  # Add ~/.config/emacs/bin to path (for DOOM Emacs stuff)
21  export PATH=$PATH:$HOME/.config/emacs/bin
```

Define some environment variables.

```
1   export DS_DIR=~/PhD/datasets-no/experiment_images/
2   export DSO_BIN_DIR=~/PhD/workspace-no/vo/orig/dso/build/release/bin
3   export DSO_RES_DIR=~/PhD/workspace-no/vo/orig/dso_results
```

Load my `bitwarden-cli` session, exported to `BW_SESSION`.

```
1   source ~/.bitwarden-session
```

10.8   System dark theme trick

Zotero does not support dark mode (ATM), when using a system-wide dark theme (at least on KDE), Zotero UI gets messed up, to fix this, we can force Zotero to use its default GTK theme by defining the `GTK_THEME=Default`.

```
1   [Desktop Entry]
2   Type=Application
3   Name=Zotero
4   GenericName=A free, easy-to-use tool to help you collect, organize, cite, and share your research sources.
5   Icon=zotero
6   Exec=GTK_THEME=Default /usr/bin/zotero --url %u
7   Categories=Office
8   Terminal=false
9   MimeType=x-scheme-handler/zotero
```

Same thing for Scilab

```
1   [Desktop Entry]
2   Comment=Scientific software package for numerical computations
3   Exec=GTK_THEME=Default scilab -f %f
4   GenericName=Scientific Software Package
5   Icon=scilab
6   Name=Scilab
7   StartupNotify=false
8   Terminal=false
9   Type=Application
10  Categories=Science;Math;
```

```
11  Keywords=Science;Math;Numerical;Simulation
12  MimeType=application/x-scilab-sci;application/x-scilab-sce;application/x-scilab-tst;application/x-scilab-dem;ap
    ↪   plication/x-scilab-sod;application/x-scilab-xcos;application/x-scilab-zcos;application/x-scilab-bin;applica
    ↪   tion/x-scilab-cosf;application/x-scilab-cos;
```

```
1   [Desktop Entry]
2   Comment=Hybrid simulator
3   Exec=GTK_THEME=Default xcos
4   GenericName=Scientific Software Package
5   Icon=xcos
6   Name=Xcos
7   StartupNotify=false
8   Terminal=false
9   Type=Application
10  Categories=Science;Physics;
11  Keywords=Science;Physics;Simulation
12  MimeType=application/x-scilab-xcos;application/x-scilab-zcos;application/x-scilab-cosf;application/x-scilab-cos;
```

10.9   Rust format

For Rust code base, the file `$HOME/.rustfmt.toml` contains the global format settings, I like to set it to:

```
1   # Rust edition 2018
2   edition = "2018"
3
4   # Use Unix style newlines, with 2 spaces tabulation.
5   newline_style = "Unix"
6   tab_spaces = 2
7   hard_tabs = false
8
9   # Make one line functions in a single line
10  fn_single_line = true
11
12  # Format strings
13  format_strings = true
14
15  # Increase the max line width
16  max_width = 120
17
18  # Merge nested imports
19  merge_imports = true
20
21  # Enum and Struct alignement
22  enum_discrim_align_threshold = 20
23  struct_field_align_threshold = 20
24
25  # Reorder impl items: type > const > macros > methods.
26  reorder_impl_items = true
27
28  # Comments and documentation formating
29  wrap_comments = true
30  normalize_comments = true
31  normalize_doc_attributes = true
32  format_code_in_doc_comments = true
33  report_fixme = "Always"
34  todo = "Always"
```

10.10   eCryptfs

10.10.1   Unlock and mount script

```
1   #!/bin/sh -e
2   # This script mounts a user's confidential private folder
3   #
4   # Original by Michael Halcrow, IBM
5   # Extracted to a stand-alone script by Dustin Kirkland <kirkland@ubuntu.com>
6   # Modified by: Abdelhak Bougouffa <abougouffa@fedoraproject.org>
7   #
8   # This script:
9   #  * interactively prompts for a user's wrapping passphrase (defaults to their
10  #    login passphrase)
11  #  * checks it for validity
12  #  * unwraps a users mount passphrase with their supplied wrapping passphrase
13  #  * inserts the mount passphrase into the keyring
14  #  * and mounts a user's encrypted private folder
15
16  PRIVATE_DIR="Private"
17  PW_ATTEMPTS=3
18  MESSAGE=`gettext "Enter your login passphrase:"`
19
20  if [ -f $HOME/.ecryptfs/wrapping-independent ]
21  then
22    # use a wrapping passphrase different from the login passphrase
23    MESSAGE=`gettext "Enter your wrapping passphrase:"`
24  fi
25
26  WRAPPED_PASSPHRASE_FILE="$HOME/.ecryptfs/wrapped-passphrase"
27  MOUNT_PASSPHRASE_SIG_FILE="$HOME/.ecryptfs/$PRIVATE_DIR.sig"
28
29  # First, silently try to perform the mount, which would succeed if the appropriate
30  # key is available in the keyring
31  if /sbin/mount.ecryptfs_private >/dev/null 2>&1
32  then
33    exit 0
34  fi
35
36  # Otherwise, interactively prompt for the user's password
37  if [ -f "$WRAPPED_PASSPHRASE_FILE" -a -f "$MOUNT_PASSPHRASE_SIG_FILE" ]
38  then
39    tries=0
40

10.10.2   Desktop integration

```
1   [Desktop Entry]
2   Type=Application
3   Version=1.0
4   Name=eCryptfs Unlock Private Directory
5   Icon=unlock
6   Exec=/home/hacko/.ecryptfs/ecryptfs-mount-private-gui
7   Terminal=False
```

10.11   GDB

10.11.1   Early init

I like to disable the initial message (containing copyright info and other stuff), the right way to do this is either by starting gdb with -q option, or (since GDB v11 I think), by setting in ~/.gdbearlyinit.

```
1   # GDB early init file
2   # Abdelhak Bougouffa (c) 2022
3
4   # Disable showing the initial message
5   set startup-quietly
```

10.11.2   Init

GDB loads $HOME/.gdbinit at startup, I like to define some default options in this file, this is a WIP, but won't evolve too much, as it is recommended to keep the .gdbinit simple. For the moment, it does just enable pretty printing, and defines c and n commands to wrap continue and next with a post refresh, this is just to avoid the annoying TUI when the program outputs to the stdout.

```
1   # GDB init file
2   # Abdelhak Bougouffa (c) 2022
3
4   # Save history
5   set history save on
6   set history filename ~/.gdb_history
7   set history remove-duplicates 2048
8
```

```
9    # Set pretty print
10   set print pretty on
11
12   # This fixes the annoying ncurses TUI gliches and saves typing C-l each time to refresh the screen
13   define cc
14     continue
15     refresh
16   end
17
18   define nn
19     next
20     refresh
21   end
22
23   guile
24   <<guile-check-for-script>>
25   end
```

WIP: Guile Scheme per program/project script   I often debug programs with a lot of arguments, I like to be able to set the arguments and the binary file to be launched in a per project script (currently using Guile Scheme). This bit of code checks if the `gdb.scm` file exists in the working directory, and if so, loads it.

A more flexible way is to provide a per program config files (to debug a program named `fft`, I like to create a script named `fft.scm` which gets loaded after the file). The following is a WIP, for the moment, I need to call my custom command `dbg-guile` when GDB done loading symbols from the file, otherwise, the used `(current-progspace)` returns an object with no filename. I need a mechanism to hook the `(dbg-find-and-load)` to GDB's load file functionality.

```
1    (use-modules (gdb))
2
3    (define (dbg-check-and-load filename)
4      (if (file-exists? filename)
5        (begin (display (string-append "Found a Guile Scheme script, loading file " filename "\n"))
6               (load filename)
7               #t)
8        #f))
9
10   (define (dbg-find-and-load)
11     ;; Get the program name from the current progspace
12     ;; For a program named "prog", the priorities goes like this:
13     ;; 1. a script with the same program name (prog.scm) exists in the current directory
14     ;; 2. a script with the same program name (prog.scm) exists in the program directory
15     ;; 3. a script with the name (gdb.scm) exists in the current directory
16     (let ((dbg-prg-filename (progspace-filename (current-progspace))))
17       (if dbg-prg-filename
18         (or (dbg-check-and-load (string-append (basename dbg-prg-filename) ".scm"))
19             (dbg-check-and-load (string-append dbg-prg-filename ".scm")))
20         (dbg-check-and-load "gdb.scm"))))
21
22   ;; Run by default
23   (dbg-find-and-load)
24
25   ;; Define a command to load binary specific config
26   (register-command! (make-command "dbg-guile" #:invoke (lambda (self arg from-tty) (dbg-find-and-load))))
```

In my project, I create a `gdb.scm` (or `<program-name>.scm`) with something like this:

```
1    ;; Load program executable
2    (execute "file ./build/bin/my_program")
3
4    ;; Load program arguments
5    (execute (string-join '("set args "
6                            "arg1"
7                            "--param=arg2")))
```

10.12   GnuPG

I add this to my `~/.gnupg/gpg-agent.conf`, to set the time-to-live to one day.

```
# Do not ask me about entered passwords for 24h (during the same session)
default-cache-ttl 86400
max-cache-ttl 86400
```

10.13   Packages

I like to use the BMC class, however, I do not like to manually install stuff in system directories, so I made an Arch Linux AUR package `bmc-git` for it.

I do use the `metropolis` theme for Beamer presentations, so I'm maintaining a package of it in the AUR too.

```
check_and_install_pkg () {
  PKG_NAME="$1"
  if ! pacman -Qiq ${PKG_NAME} &> /dev/null
  then
    echo "Package ${PKG_NAME} is missing, installing it using yay"
    yay -S ${PKG_NAME}
  fi
}

check_and_install_pkg bmc-git
check_and_install_pkg beamer-theme-metropolis
```

10.14   KDE Plasma

On KDE, there is a good support for HiDPI displays, however, an annoying thing is the small icons in some contexts (for example, a right click on desktop). This can be fixed by setting `PLASMA_USE_QT_SCALING=1`. KDE sources the files with `.sh` extension found on `~/.config/plasma-workspace/env`, so lets create our's.

```
# export PLASMA_USE_QT_SCALING=1
```
